PART 1

Methodology and Analyses

- 1 Personal Names in the Old Assyrian Texts from Kaniš 7
 - 1.1 Dating of Texts 8
 - 1.2 Old Assyrian Texts from Outside Kaniš 8
 - 1.3 Men's vs. Women's Names 9
 - 1.4 Family Relations 9
 - 1.5 Names Attested in Other Sources 10
- 2 The Linguistic Analysis of Personal Names: Methodological Preliminaries 12
 - 2.1 Kanišite Names 13
 - 2.2 Methodological Difficulties 13
- 3 Phonological Interpretation of the Kanišite Names 16
 - 3.1 The Transliteration of the Cuneiform Signs 18
 - 3.2 Spelling Alternations in Names 26
- 4 Identifying the Linguistic Background of the Kanišite Personal Names 45
 - 4.1 The Term *nuwā'um* 45
 - 4.2 Influence of the Local Language(s) of Kaniš on Old Assyrian 46
 - 4.3 Arguments for a Hittitoid Identification 53
 - 4.4 Arguments for a Luwic Identification 58
 - 4.5 Arguments for a Hurrian Identification 65
 - 4.6 Arguments for a Hattic Identification 66
 - 4.7 Names of an Unclear Origin 68
 - 4.8 Conclusions: Kanišite Hittite 75

PART 2

Kanišite Hittite Personal Names: the Material

- 5 **Kanišite Hittite Compound Names** 79
 - 5.1 The Linking *-a-* 80
 - 5.2 The Final Elements of the Kanišite Hittite Compound Names 81
 - 5.3 The Initial Elements of the Kanišite Hittite Compound Names 114
 - 5.4 Summary: an Overview of Elements 200
- 6 **Other Kanišite Hittite Names** 207
 - 6.1 Relatively Certain Cases 207

Preface

The research for this book began in September 2013 when I started working as a post-doc on the project *Kaniš, a Multi-Ethnic City in Ancient Anatolia*, which was one of the sub-projects of the larger NWO-funded research project *The Impact of Migration: Migrant-Related Change in the Ancient Near East* (NWO-project number 360-63-060), led by Jan Gerrit Dercksen at the Leiden University Institute for Area Studies (LIAS). When in January 2015 I started working on my own NWO-funded research project *Splitting the Mother Tongue: The Position of Anatolian in the Dispersal of the Indo-European Language Family* (NWO-project number 276-70-026) at the Leiden University Centre for Linguistics (LUCL), I had to put aside the work on this book for a while. However, since the topic of this book is relevant for the latter project as well, I decided to finish it within that context. Especially during a research stay at the University of Barcelona (March–June 2017), I was able to make much progress, and in the spring of 2018 I had finished a first draft, which I sent to several colleagues for criticism. After having incorporated their remarks and the comments of two reviewers appointed by the editor of the *Handbuch der Orientalistik* series, I completed the final version of this book in November 2018.

The process of writing this book has benefited greatly from the help and support of many colleagues, to whom I am very grateful. First and foremost, I would like to thank Jan Gerrit Dercksen for being enthusiastic about my plan to write this book and for hiring me for executing this idea within the context of his research project. He helped me find my way into the fascinating world of Old Assyrian studies, and supported me throughout all these years, always being willing to provide feedback on my analyses and ideas and lending me his tremendous knowledge. Many thanks are also due to Gojko Barjamovic who, as a reviewer for the *HdO*-series, provided me with many pieces of detailed information that I had missed, and helped me to improve the chapter on the historical background of Kanišite Hittite. I am also grateful to the following colleagues who have been so kind as to provide me with useful comments on an earlier version of this book: Bert Kouwenberg, Lucien van Beek, Stefan Norbruis and Frits Kortlandt. I would also like to thank other colleagues who in all kinds of ways have been beneficial for the writing of this book: Kate Bellamy, Jorrit Kelder, Peter Alexander Kerkhof, Guus Kroonen, Sasha Lubotsky, Michaël Peyrot, Tijmen Pronk, Michiel de Vaan, Xander Vertegaal, and Willemijn Waal. Special thanks are due to my Barcelona colleagues, who have been so hospitable during my research stay there: Ignasi-Xavier Adiego Lajara, Elena Martínez Rodríguez, Bartomeu Obrador Cursach, and Mariona Vernet Pons from

the Indo-European department, as well as Lluís Feliu Mateu, Agnès Garcia Ventura, Adelina Millet Albà, and Albert Planelles Orozco from the Institut del Pròxim Orient Antic. I would also like to express my thanks to Mark Weeden for accepting this book for publication in the series *Handbuch der Orientalistik* and to Katelyn Chin and Michael Mozina of Brill for their careful production and editing work.

This book is dedicated to the memory of Rob Beekes, who sadly passed away on 21 September 2017. I am grateful for everything he taught me, and hope that his precise methodological approach to performing philology and linguistics will resonate in the pages to come.

Introduction

From ca. 1880 onwards, it was possible to buy on the Turkish antiquities market small clay tablets containing texts written in the cuneiform script, which were said to come from Cappadocia, a region in Central Anatolia. It soon became clear that all these so-called ‘Cappadocian tablets’ in fact originated from a single location, namely Karahöyük, a village that lies some 20 km northeast of Kayseri. Next to this village a large mound called Kültepe (‘ash mound’) is situated, which evidently forms the remains of an ancient city and therefore was thought to have been the source of the tablets. However, excavations carried out on the mound in the 1890s by Ernest Chantre, and in 1906 by Hugo Winckler yielded no tablets. Only in 1925, after having dug on the mound for three months with no success either, Bedřich Hrozný was told by the local villagers that the tablets that for decades had been appearing on the antiquities market did not in fact come from the mound itself, but had been dug up in the fields surrounding it. And indeed, when in September 1925 Hrozný started excavating at the location pointed out by the villagers, he immediately discovered the foundations of several houses, and within a few weeks had found more than 1,000 tablets. However, it was not until 1948 that a systematic excavation of Kültepe and its surrounding fields was started, this time by the *Türk Tarih Kurumu* (Turkish Historical Society) under the supervision of Tahsin Özgüç. In that year, again more than 1,000 tablets were discovered, and since then Özgüç has excavated on almost a yearly basis at Kültepe, discovering in the Lower Town the remains of dozens of houses with thousands of tablets in them. Özgüç kept on working at Kültepe until his death in 2005, and from 2006 onwards the excavations are led by Fikri Kulakoğlu.¹

From the excavations it has become clear that the mound itself was inhabited from at least the Early Bronze Age (beginning of the 3rd millennium BCE) up to Byzantine times and beyond.² The lower town, in which virtually all clay tablets were found, was inhabited only in the Middle Bronze Age (ca. 2100–1600 BCE), however.³ The earliest dated tablet from Kültepe dates to ca. 1935 BCE, and the youngest one to 1717 BCE (dates according to the Middle Chronology).⁴

1 Cf. Larsen 2015: 17–26 for a history of the discovery of and excavations at Kültepe.

2 Cf. Barjamovic 2015a.

3 Larsen 2015: 30.

4 Cf. Barjamovic, Hertel & Larsen 2012: 1–40, 56.

The number of clay tablets from Kültepe (including the ca. 3,800 that were sold at the antiquities market before proper excavations had begun) is at present ca. 23,000, albeit that only some 5,800 of these have thus far been published.⁵ In these texts, the city that once was situated at Kültepe is called Kaniš (*kà-ni-iš*^(KI), *kà-ni-iš*^(KI)). This name is also known from later, Hittite texts, where in akkadographic constructions it is spelled ^{URU}*ka-ni-iš* (in older texts) and ^{URU}*ka-ni-eš* (in younger texts), although in Hittite itself, Kaniš was called Nēša (^{URU}*ne-e-ša*).⁶ In the present book I will refer to this city as Kaniš, however.

The Old Assyrian texts from Kaniš are virtually all economic documents and letters that stem from the personal archives of merchants that were active in the long-distance trade between Aššur (a city situated at the banks of the Tigris some 750 km to the east of Kaniš) and Central Anatolia. They show that Kaniš at that time was a bustling mercantile city that formed the center of the trade in textiles and several metals (tin, copper, silver, gold, etc.). This trade was dominated by Assyrian merchants who had settled in Anatolia, and sometimes lived there for decades. From the texts it is clear that many of them founded families in Kaniš, oftentimes with local women.

Although the majority of texts deal with economic and juridical matters (contracts, debt notes, inventory lists, travel expenses, marriage contracts, testaments, divorce papers) in which Assyrians are the main actors, we do find in many documents small snippets of information on the local population of Kaniš and daily life in this city, providing some answers to questions like: What was the political structure of Kaniš? What did its society look like? Which gods were revered? What kind of culture did the local population have? And what is their (ethno)linguistic background?

Already early on in the study of the Old Assyrian tablets it was recognized that the question about the (ethno)linguistic nature of the local population of Kaniš may be answered by researching the personal names that can be found in these texts: besides the thousands of attestations of Assyrian personal names, they also contain hundreds of names that are not classifiable as Assyrian, and therefore probably refer to members of the local population. Through a linguistic analysis of these names, it should be possible to say something about the language spoken by these people.

5 Cf. Michel 2003: v–vii; Michel 2006: 436; Michel 2011a: 416.

6 Güterbock 1958: 50. In an inscription from classical times, the name Anisa (ANİEA) is attested (Cumont 1932), which according to Barjamovic (2015a: 239–40) can be equated with the toponym Ἀννίς- / Ἀν(ν)ησις- as found in a letter from Basil, bishop of Caesarea Mazaca (4th century AD). Özgüç (1950: 104) points out that as late as the 17th century AD, the name *Kınış* was used for Kültepe.

In the early years of Old Assyrian studies a number of scholars (e.g. Goetze, Bossert, Landsberger, Bilgiç, Alp, Laroche) therefore occupied themselves with studying these non-Assyrian personal names, producing different kinds of analyses of their linguistic nature.⁷ Nowadays it seems to be consensus that, apart from a few possibly Luwian, Hattic and Hurrian names, the large majority of the non-Assyrian names from Kaniš should linguistically be classified as Hittite.⁸ Not only historically and culturally this is an important insight, also from a linguistic point of view it is extremely interesting: these Hittite names would form the oldest witnesses of an Indo-European language anywhere in the world.⁹

Unfortunately, most research into the non-Assyrian names as attested in the Old Assyrian texts from Kaniš stem from the 1950s and 1960s. In the decades that followed, our knowledge of Hittite has expanded dramatically (reflected in dictionaries, grammars, etymological treatments, etc.), and many analyses of non-Assyrian names from these earlier studies have become obsolete. An important exception is Thomas Zehnder's 2010 book *Die hethitischen Frauen-namen: Katalog und Interpretation*, which contains an extensive treatment of the 'Cappadocian' material as well. However, as is clear from its title, this book focuses on women's names, and the many non-Assyrian men's names are therefore not systematically treated in it.

All in all, it seems justified to conclude that the non-Assyrian onomastic material in the Old Assyrian texts from Kaniš deserves a new, up-to-date linguistic treatment, and that the most recent insights into the nature of the Hittite language (but also of Luwian, Hattic and Hurrian) should play a leading part in the analysis of these names. It is with this aim that the present book has been written.

⁷ See Alp 1997 for a – quite personal – *Forschungsgeschichte*.

⁸ E.g. Dercksen 2007: 27; Zehnder 2010: 2; Michel 2011b: 327; Kulakoğlu 2014: 86; Larsen 2015: 138.

⁹ The earliest attested Kanišite name is *ḫazuala* (g.u.) as found on AKT 6a, 1 (dated to REL 42 = 1931 BCE, cf. Barjamovic, Hertel & Larsen 2012: 92), although it is not fully clear whether this name is really Hittite or not, cf. § 5.2.1, with footnote 332.

Note that Kroonen, Barjamovic & Peyrot (2018) have recently claimed that a number of personal names that are recorded in texts from Ebla, dated to the 25–24th centuries BCE (Bonecchi 1990), and which refer to individuals said to be from the state of Armi (a toponym that is further unknown), belong to one or more languages “that clearly fall within the Anatolian Indo-European family” (2018: 6). If correct, these names, which predate the Kanišite Hittite names treated in this book with half a millennium, would then be the earliest attested witnesses of Indo-European. However, Kroonen, Barjamovic & Peyrot do not offer a detailed analysis of this material, and at present I would therefore regard the linguistic status of these names as too uncertain to make any broad claims.

PART 1

Methodology and Analyses

Personal Names in the Old Assyrian Texts from Kaniš

The material treated in this book is not exhaustive, simply because there are still many Old Assyrian texts found in Kaniš that remain unpublished. As said above, of the in total 23,000 tablets that have been unearthed, thus far only some 5,800 have been published. However, many of the unpublished texts are in the hands of members of the so-called Old Assyrian Text Project (OATP), who share drafts with each other and the wider scholarly community. Moreover, between 2009–2011, OATP member Thomas Hertel compiled the *Old Assyrian Prosopography Database* (OAPD), which contained over 35,000 records of personal names, “drawn from ca. 6.200 texts out of a total of ca. 10.000 available texts”, including published and unpublished texts, and which was available on the Internet through the website of OATP.¹⁰ For the present research I have made an extensive use of this database. Another member of the OATP, Jan Gerrit Dercksen, has in the 1990s compiled a large collection (120 pages, unpublished) of personal names from published as well as unpublished texts, which he generously shared with me, and which has been of much use as well. When it comes to Old Assyrian texts in general, an important source of information has been Karl Hecker’s website *Altassyrische Texte in Umschrift* (aATU),¹¹ which includes the transliterations of almost all published Old Assyrian texts, but also many unpublished ones. Another large database that I have used extensively is the *Cuneiform Digital Library Initiative* (CDLI),¹² which includes transliterations but also many hand copies and photographs of Old Assyrian texts. Moreover, I have gathered references to personal names as mentioned in the scholarly literature as much as I could.

Using all these sources together, I have compiled a database of over 3,300 records of non-Assyrian personal names, which form the core of the research presented in this book, and which, I believe, is at least large enough to warrant some more general statements on the usage of personal names in Kaniš. It

10 From 2011 to 2014, on <http://oatp.net>. Unfortunately, since then Hertel’s database has not been online anymore. See <http://oatp.ku.dk>, where it is still referred to.

11 <http://www.hethport.uni-wuerzburg.de/altass/>.

12 <http://cdli.ucla.edu/>.

must be stressed, however, that a more definitive study of the personal names can only be executed when all material is available.

1.1 Dating of Texts

Of the in total 23,000 Old Assyrian tablets that are excavated, the vast majority stem from the archaeological stratum Kaniš Lower Town level II (ca. 1970–1835 BCE), whereas Lower Town level Ib (ca. 1835–1710 BCE) has yielded only some 450 tablets. In the remainder of this book, only tablets from the Ib period are therefore dated as such, with the siglum “[Ib]”. When this siglum is not present, the tablet stems from level II (except the tablets from Ališar, cf. the following section).

1.2 Old Assyrian Texts from Outside Kaniš

Although Kaniš is by far our largest source when it comes to Old Assyrian texts, there are also tablets found at other locations, namely Aššur itself (24 tablets), Ḫattuša / Boğazköy (72 tablets), Ališar (63 tablets), and some other places.¹³ Interestingly, the tablets from Ališar contain several attestations of non-Assyrian names that are identical to non-Assyrian names attested in Kaniš (e.g. *ḫušiluman*, *wašinuman*). By contrast, the tablets found in Ḫattuša / Boğazköy contain non-Assyrian names that are clearly different from the Kanišite ones.¹⁴ In the remainder of this book I have therefore included the non-Assyrian personal names from Ališar as well. Since the texts from Ališar are all published in a single volume, OIP 27, it is easy to know when a certain name is attested on a tablet from Ališar. Note that all tablets from Ališar seem to be contemporaneous with the tablets from Kaniš level Ib.

The question what consequences this similarity between the non-Assyrian names from the texts from Kaniš and Ališar may have for a possible (ethno-) linguistic connection between these two cities will be treated in § 10.3.9.

¹³ Cf. Michel 2003.

¹⁴ E.g. the names *putkan* and *ḫarlati* (KBo 9.3, 3–4). Cf. § 5.3.4 for the name *alumahši* (KBo 9.9 rev. 4), which at the surface resembles the Kanišite non-Assyrian names ending in *-(a)ḫšu*.

1.3 Men's vs. Women's Names

Since the variant of the cuneiform script as employed by the Assyrian merchants does not use determinatives that indicate the gender of a person,¹⁵ this information must be gathered from the context. A first important indication is the use of gender specific words to describe individuals, like e.g. *abum* 'father' vs. *umum* 'mother', *aḥum* 'brother' vs. *aḥātum* 'sister', *mutum* 'husband' vs. *aššutum* 'wife', etc. A second important indication is the use of patronymics, in which we either find *A DUMU B* 'A, son of B', or *A DUMU.SAL B* 'A, daughter of B'. A third important indication is the use of grammatical agreement in the pronominal system (e.g. *iš'amšu* 'he bought him' vs. *iš'amši* 'he bought her') and in the verbal system (e.g. *tīšu* 'he has a claim' vs. *tīšu* 'she has a claim'). In this way, it can be decided of many personal names whether they refer to men or to women. Note that this does not hold for all names: sometimes there is no material available to determine a name's gender reference. An extra complication is that in documents containing many non-Assyrian names, grammatical agreement is often incorrectly executed, for instance by using masculine morphemes to refer to females.¹⁶ It is generally thought that this indicates such texts were written by local, non-native speakers of Assyrian, whose first language did not make a grammatical distinction between masculine and feminine gender.¹⁷

Throughout this book, it will be noted for each name whether it refers to men (m.), women (f.), both genders (m./f.), or whether its gender reference cannot be established (g.u. = 'gender unknown').

1.4 Family Relations

Of many persons occurring in the Old Assyrian texts the names of some of their family members are known as well. Often this is the case because persons are mentioned with a patronymic, *A DUMU(.SAL) B* 'A, son / daughter of B'. Or because husband and wife are mentioned together, *A B aššassu* 'A (and) B, his wife'. In other cases, we find other relationships being made explicit in the text. For instance, in kt n/k 76, we read the following:

15 Unlike the variant used by the Hittites, for instance, which uses the determinative ^m for men's names and ^f for women's names.

16 Cf. § 4.2.1, point 8 for a fuller treatment.

17 E.g. Dercksen 2007: 27⁶, cf. § 4.2.1.

- 8 ... *i-še-er kà-lu-ú-a*
 9 *ù a-zu-ni-na a-ši-tí-šu*
 10 *wa-al-ḫi-iš-na ù*
 11 *pì-it-ḫa-na me-er-e-šu*
 12 *a-ši-e-et i-šu ...*

‘On Kalua and Azunina, his wife, (and on) Walḫišna and Piṭḫana, his sons, Ašiet has a claim.’

Or compare the beginning of TC 1, 62:¹⁸

- 1 *lá-tù-ša-ma ú ḫa-šu-š[ar]*
 2 *a-bu-um ú-mu-um ší-im-nu-m[a-an]*
 3 *i-a-ta-ni-kà pì-ru-a at-ḫu?*
 4 *be-tám ú-še-ši-ib-šu-nu-ma*

‘Latušama and Ḫašuš[ar] are father (and) mother; Šimnum[an], Iatanika (and) Pirua are siblings. He (= the father) made them dwell in a (single) house.’¹⁹

In this way, we sometimes have information on the make-up of entire families, which allows us to identify clear clusters of personal names, which can be useful for determining the linguistic background of specific names.

1.5 Names Attested in Other Sources

A number of non-Assyrian personal names from Kaniš seem to have counterparts in Hittite texts found in Ḫattuša, cf. the following list (taken over from Zehnder 2010: 3–4, with some additions):

Kaniš	Ḫattuša	Kaniš	Ḫattuša
<i>alala</i> (f.)	~ ^f <i>allalla</i>	<i>kikaršan</i> (m.)	~ ^m <i>kikarša</i> ²⁰
<i>alauani</i> (g.u.)	~ ^m <i>alaṽanni</i>	<i>kiki</i> (m.)	~ ^f <i>kikki</i>
<i>amuna</i> (m.)	~ ^m <i>ammuna</i>	<i>kulanala</i> (m.)	~ ^m <i>kuṽalanalla</i>
<i>anana</i> (f.)	~ ^f <i>annanna</i>	<i>malaš</i> (m.)	~ ^f <i>māla</i>

¹⁸ Cf. Hecker aATU for this transliteration.

¹⁹ Cf. Veenhof 1998: 147 for this translation.

²⁰ This name is not attested in Ḫattuša, but in a Hittite text from Mašat Höyük.

<i>aštu</i> (f.)	~ ^f <i>ašdu</i>	<i>mula</i> (f.)	~ ^m <i>mulla</i>
<i>atali</i> (m.)	~ ^m <i>attalli</i>	<i>muati</i> (f.)	~ ^f <i>mūṭatti</i>

<i>išpudaḫšu</i> (m.)	~ ^m <i>išpudaḫšu</i>	<i>zizila</i> (f.)	~ ^m <i>zizila</i>
<i>išpunuman</i> (m.)	~ ^m <i>išpunnuma</i>	<i>zulia</i> (m.)	~ ^m <i>zuliṽa</i>
<i>kalulu</i> (m.)	~ ^m <i>gallullu</i>	<i>zua</i> (m.)	~ ^m <i>zuṽā</i>
<i>kammalia</i> (m.)	~ ^m <i>kammaliṽa</i>	<i>zuzu</i> (m.)	~ ^m <i>zūzzu</i>

Of course, it cannot always be excluded that we are dealing here with a coincidental resemblance between names. For instance, is the equation between *kiki* (m.) as found in the texts from Kaniš and ^f*kikki* as attested in Ḫattuša (thus Zehnder *l.c.*) really convincing? Especially if we take into account that in the texts from Kaniš the name *kiki* is a man's name, whereas in Ḫattuša *kikki* is used as a woman's name? Also Zehnder is aware of this problem when he remarks that, next to this list, there are "viele weitere Fälle aus dem Bereich der Lallnamen mit unterschiedlichem Grad an Plausibilität der Gleichsetzung", referring to Kanišite *aka*, *kuku*, and *kula* that resemble the Ḫattuša names ^m*agga*, ^m*kukku*, and ^m*gulla*, respectively (2010: 4).²¹

However, some of the name pairs from the list above are too specific to be coincidental, for instance *ḫapuašu* (m.) (Kaniš) ~ ^m*ḫappuṽaššu* (Ḫattuša), *šupiuman* (m.) (Kaniš) ~ ^m*šuppiuman* (Ḫattuša), etc. We therefore can conclude that a certain number of the non-Assyrian names from Kaniš are found in Hittite texts from Ḫattuša as well, which points to at least some kind of connection between the cultures of these two cities.

Moreover, since the variant of the cuneiform script that is used in Ḫattuša makes more detailed phonetic distinctions than the variant of the cuneiform script as used in the Old Assyrian texts from Kaniš, the attestations in Ḫattuša texts may sometimes give additional information on the phonetics of names found in the texts from Kaniš, cf. Chapter 3.

²¹ With reference to Laroche 1966: 24, 96.

The Linguistic Analysis of Personal Names: Methodological Preliminaries

The function of personal names is to refer to individuals. In that sense, the ‘meaning’ of a personal name is the identification of that person. However, in many cultures personal names are made up of one or more linguistic elements that also have a lexical meaning. It is therefore often possible to linguistically analyse, i.e. ‘translate’, personal names. This allows us to state, for instance, that the Greek name Σοφοκλῆς means ‘famous for wisdom’ and that the Latin name *Quintus* means ‘fifth (child)’. In the same way, there are many personal names in the Old Assyrian texts that can be translated from Assyrian. For instance, the name *aššur-malik* clearly means ‘Aššur is the advisor’, and *iddin-ištar* translates to ‘Ištar has given’.²²

There are, however, also personal names in the Old Assyrian corpus that do not easily lend themselves to an Assyrian interpretation. Take for instance the name *kurara* (m.), which occurs dozens of times, but which has no immediately clear Assyrian translation. This does not mean that this name does not belong to the Assyrian inventory of names. There are several individuals named *kurara* whose family members have clearly analysable Assyrian names: there is a *kurara*, son of *abu-šalim* ‘the father is well’, a *kurara*, son of *aššur-malik* ‘Aššur is the advisor’, a *kurara*, son of *iddin-suen* ‘Suen has given’, and a *kurara*, father of *enna-suen* ‘Suen is merciful’. It therefore is likely that, despite that it has no inherent Assyrian meaning, *kurara*, too, is in essence an Assyrian name.

However, there are also names to be found in the corpus that cannot be linguistically analysed as Assyrian, and that cluster with other unanalysable names. Take for instance the name *šupunaḥšu* (m.), which does not in any way lend itself for an analysis in Assyrian. All individuals carrying this name have relatives with names that do not seem to be Assyrian either. There is, for instance, a *šupunaḥšu* who is the son of *šaktanua*, a *šupunaḥšu* who is the son of *pirua*, a *šupunaḥšu* who is the son of *aštalkian*, a *šupunaḥšu* who is the son of *ata*, a *šupunaḥšu* who is the son of *ḥapuala*, a *šupunaḥšu* who is the

22 Cf. Dirbas 2017: 19–32 for a general overview of name-giving in Akkadian.

adoptive father of *walḥašna* and *inar*, etc. The combination of the fact that these names are unanalysable in Assyrian with the fact that we find clusters of such names, is an important argument in favour of the assumption that these names do not refer to Assyrian individuals, but instead must refer to members of the local, Kanišite population. They therefore potentially form an important window onto the (ethno)linguistic make-up of Kaniš in the Old Assyrian period.

2.1 Kanišite Names

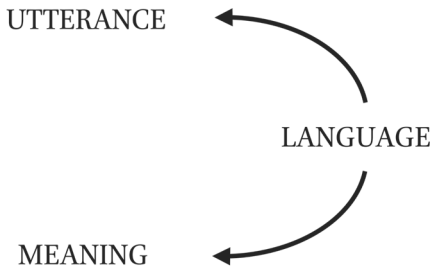

This book is concerned with an analysis of (a part of) the non-Assyrian personal names as found in the Old Assyrian texts from Kaniš, which from now on I will refer to as ‘Kanišite names’. It should be noted that the adjective ‘Kanišite’ is meant purely geographically (‘deriving from (the vicinity of) Kaniš’), and not linguistically. To what extent we can determine the linguistic character of these Kanišite names will form the major topic of this book.

As stated in Chapter 1, I have for this research compiled a database of Kanišite personal names, which contains more than 3,300 records. Each record files the occurrence of an individual with a Kanišite name on a specific clay tablet. Note that this does not mean that we are dealing with more than 3,300 different personal names: each time a name occurs on a tablet, it has been made into a record. For instance, the name *piruaḥšu* occurs on eleven different tablets (sometimes with different spellings), and thus occurs in eleven different records in my files. This does not mean, however, that there are 3,300+ different Kanišite individuals recorded on the tablets: it is not always possible to determine whether attestations of a single name on different tablets refer to one and the same individual. It is therefore certainly possible that the number of individuals is less than the number of records.

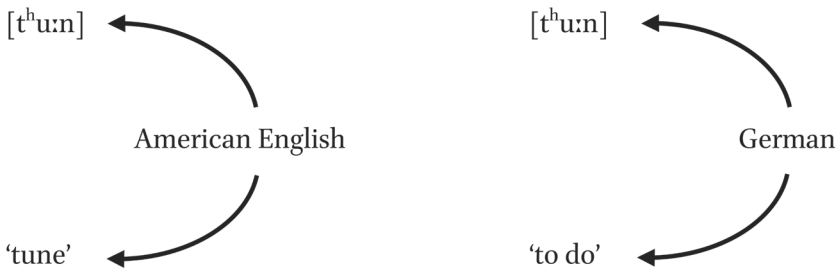

2.2 Methodological Difficulties

The question what language or languages these Kanišite names may belong to is in principle a difficult one to answer due to the following two complicating matters.

First, the correlation between an utterance and its meaning is determined by the language the utterance is made in. In that sense, language functions as the code between utterance and meaning:

Take for instance the utterance [t^hu:n]. What meaning this utterance has is determined by the language it is in. If it is in American English, for example, the utterance means ‘tune’. If it is in German, however, it means ‘to do’. Cf. the following schemes:

We see that the three members of the triangle are dependent on each other. This means that if we know two of them, we can in principle predict the third. For instance, if we have an utterance [t^hu:n] in American English, we know it has the meaning ‘tune’. If we have an utterance [t^hu:n] that means ‘tune’ we can conclude that we are dealing with American English. If we have a meaning ‘tune’ in American English, we know that the corresponding utterance should be [t^hu:n].

However, if we know only one member of the triangle, the other two members cannot be predicted. For instance, if we only have the utterance [t^hu:n] but do not know which language it is made in, we cannot know whether it means ‘tune’ or ‘to do’. Likewise, if we only have the utterance [t^hu:n] but do not know its meaning, it becomes impossible to determine which language it belongs to. Because the utterance [t^hu:n] would be a meaningful word in both English and German, it is of course *possible* that the utterance [t^hu:n] is in either one of these languages, but without knowing the semantics of the specific utterance we are dealing with, we are not able to *prove* it.

It is exactly this latter problem that we are faced with when dealing with the non-Assyrian personal names from Kaniš. Since these names are never

translated into Assyrian and are never written with logograms,²³ we cannot determine their lexical meaning. This automatically means that we cannot in principle know which language they are in. As we will see below, however, there are certainly arguments on the basis of which it can be made *likely* that a certain name belongs to a specific language, but it must always be borne in mind that absolute *proof* is very difficult to offer.

The second complicating matter is that, although there are many cultures in which personal names are made up of linguistic elements that have a lexical meaning, this does not go for all of them. For instance, in modern-day English, personal names like *Elizabeth*, *William* or *George* are synchronically unanalysable and therefore semantically empty. If this would be the case for the Kanišite personal names as well, it would be *a priori* impossible to determine on the basis of linguistic factors which language they belong to.

Despite these two complicating factors, we will in the remainder of this book see that there are certainly arguments to be given, some stronger than others, on the basis of which the language of a large number of the Kanišite personal names can be identified, although it goes without saying that these identifications come in differing grades of probability. First, we need to look more closely into the phonological interpretation of these names.

23 Compare the situation in Hittite, where, for instance, the personal name ^mšuppiluliuma can also be partly logographically written as ^mKÛ.PÛ-*ma*, with the sumerograms KÛ 'pure' and PÛ 'pond' that 'translate' the elements šuppi- 'pure' and lūli- 'pond'.

Phonological Interpretation of the Kanišite Names

The Old Assyrian texts are written in a simplified variant of the cuneiform script that uses only a limited number of signs. As a consequence, many phonological features of the Old Assyrian language remain unexpressed. For instance, although Old Assyrian knew a phonemic distinction between voiced and voiceless stops, this distinction is hardly ever made in writing; although Old Assyrian knew phonemic consonantal length, in the texts hardly any geminate spellings of consonants can be found; although Old Assyrian knew a distinction between the vowels /e/ and /i/, in its writing system these two are rarely kept apart.²⁴ This means that if also the language or languages to which the Kanišite personal names belong possessed such phonemic distinctions, these probably remained unexpressed as well.

In fact, we can make likely that this is the case. Take for instance the men's name that in Old Assyrian texts is spelled as *ḫa-pu-a-šu* and *ḫa-pu-wa-šu*.²⁵ It is generally assumed²⁶ that this name can be equated with the name that in Hittite texts from Ḫattuša is found as *ḫa-ap-pu-ua-aš-šu*,²⁷ which is attested with geminate spelling of the *p* and of the *š*. Since in Hittite consonantal length is phonemic,²⁸ the geminate spellings indicate the presence of long consonants: *ḫa-ap-pu-ua-aš-šu* = /hap:uas:u/. Since, as was mentioned above, it is known that Old Assyrian did have a phonemic difference between long and short consonants as well, but that this difference is in principle not represented in the Old Assyrian orthography,²⁹ it becomes attractive to assume that the Kanišite spellings *ḫa-pu-a-šu* and *ḫa-pu-wa-šu* represent an underlying /hap:uas:u/, with long /p:/ and /s:/, as well.

24 Kouwenberg 2017: 89–90. The reason for assuming that Old Assyrian really had these phonemic distinctions is based on their existence in its descendants, Middle and Neo-Assyrian.

25 Cf. footnote 593 for attestations.

26 Laroche 1966: 60; Zehnder 2010: 3.

27 *ḫa-ap-pu-ua-aš-šu* (KUB 34.45, 8 (fr.), 10 (MS), StBoTB 4.22, 62 (MS)). We also find the following spellings: *ḫa-pu-ua-a-aš-šu* (StBoTB 4.12, 22 (MS)), *ḫa-pu-ua-aš-šu* (StBoTB 4.13 rev. 9 (fr.) (MS), StBoTB 4.17, 8 (fr.) (MS), StBoTB 4.18, 8 (fr.) (MS), StBoTB 4.19, 5 (fr.) (MS)), and *ḫa-pu-ua-šu* (StBoTB 4.11, 25 (MS)). These latter attestations, which show a single spelling of the *p*, are all found in land grants that were written in Akkadian, so may not follow the Hittite orthographic rules.

28 Kloekhorst 2008: 21–5; Kloekhorst 2014: 544–7.

29 Kouwenberg 2017: 27–9.

Similarly in the men's name that in Old Assyrian texts is spelled *šu-pí-ú-ma-an* and *šu-pì-ú-ma-an*, and which is equated with the name that in texts from Hattuša is spelled ^m*šu-up-pí-u-ma-an*.³⁰ Also here, the Hattuša attestations show geminate spelling of the *p*, pointing to the presence of a long /p:/, which therefore can be assumed to have been present in the Kanišite name as well. Moreover, in the Hattuša attestation, the first vowel of the element *-uman* is spelled with the sign U. In Hittite, this is a significant spelling, since the sign U renders the vowel /o/, which is phonemically distinct from the vowel /u/, which would have been spelled with the sign Ú.³¹ In the Kanišite spelling, however, the sign Ú is used, whose basic value is [u]. Nevertheless, if we assume that the two different spellings represent a single underlying name, as is generally done, then we should phonologically analyse this name as ending in /-oman/: the Hittite spelling clearly dictates so. As a consequence, we must assume that the Kanišite spellings *šu-pí-ú-ma-an* and *šu-pì-ú-ma-an* represent /-oman/, which means that the Old Assyrian orthography apparently did not make a distinction between the vowels [o] and [u].³²

On the basis of these two cases, we can conclude that within the Old Assyrian writing tradition several phonetic details remain unexpressed, which has repercussions for a correct interpretation of these Kanišite names. This does not only follow from a comparison of the spelling of Kanišite names with possible correspondences from other sources, but also from an analysis of the spelling practices of Kanišite names themselves. Take for instance the name of one of the kings of Kaniš, which is found with the spellings *wa-ar-áš-ma*, *wa-ar-ša-ma* as well as *wa-ar-šu-ma*. Since these different writings refer to a single individual, there can be no doubt that there was only one underlying phonological form of this name, but this form apparently could not be properly spelled in the Old Assyrian cuneiform script.

In the following, I will discuss several aspects of the Old Assyrian cuneiform script and discuss to what extent these affect the phonological interpretation of the Kanišite personal names. Before doing so, it is first necessary to say something about the transliteration of the cuneiform signs that are used in the Old Assyrian texts.

30 ^m*šu-up-pí-u-ma-an* (KBo 3.34 ii 22 (OH/NS)), ^m*šu-up-pí-um-ni* (*ibid.* 24 (OH/NS)).

31 Cf. Rieken 2005; Kloekhorst 2008: 35–60.

32 Kouwenberg 2017: 89 discusses the possibility that Old Assyrian had a phonemic distinction between /ǝ/ and /ǔ/, but states that “Old Assyrian writing does not give any clue about the existence of [an o-]vowel”.

3.1 The Transliteration of the Cuneiform Signs

Since the cuneiform script as used by the Old Assyrians makes a wide use of polyvalence, i.e. the usage of a single sign for several values, it is not necessarily self-evident what the best way is of transliterating these signs in the Kanišite personal names. There are three main problems: (1) the spelling of stops; (2) the spelling of sibilants and affricates; and (3) the spelling of the vowels *e* and *i*.

3.1.1 The Spelling of Stops

In Old Assyrian spelling, hardly any distinction is made between homorganic voiceless, voiced and emphatic stops. For instance, the sign GA is the normal sign to spell the syllables /ka/, /ga/ as well as /qa/; the sign DU is used to spell /tu/, /du/ as well as /ṭu/, etc.³³ This brings about the question how we should transliterate these signs when they are used in the spelling of Kanišite personal names. In the following, unless stated otherwise, all statements on the distribution of certain signs are based on an analysis of the spelling practices of the ca. 5,100 Old Assyrian texts from Kaniš that are electronically searchable through the website *Cuneiform Digital Library Initiative* (CDLI).³⁴

Labials + a: The sign BA is in Old Assyrian texts the default sign to spell the syllables /pa/ and /ba/ (and is then transliterated *pá* and *ba*, respectively), whereas the sign PA occurs much more rarely, and always denotes the syllable /pa/.³⁵ This means that in principle the Old Assyrians had the possibility to write the difference between the syllables /pa/ and /ba/, but in practice hardly ever did so.

In the Kanišite personal names, the sign PA is never used: instead we only find BA. This does not necessarily mean, however, that these names did not contain the syllable /pa/: the sign BA can have this value as well. There is thus no way to decide on the basis of its spelling alone whether a certain name contains the syllable /pa/ or /ba/. It therefore seems best to transliterate the sign BA in all names in a single way, and I have chosen for the transliteration that is phonetically least marked, namely the one with the voiceless stop: *pá*.

33 Cf. Kouwenberg 2017: 17–8.

34 www.cdli.ucla.edu. Unfortunately, the transliterations in CDLI have not always proven to be correct: especially in the indications of index numbers of signs mistakes are made. Nevertheless, the overall accuracy is good enough to warrant general statements about distribution patterns of individual signs.

35 In the corpus that is searchable through CDLI, we find ca. 3,700 occurrences of the sign BA in the value /pa/ vs. only 65 occurrences of the sign PA in this value.

Labials + e/i: Both the sign BE and BI are in the Old Assyrian texts used to denote the syllables /be/i/ as well as /pe/i/ (in which values the sign BE is transliterated *be*, *bi*₄, *pè*, and *pì*, and the sign BI *bé*, *bi*, *pé*, and *pí*, respectively).³⁶ The sign PE/I is also used, but only in the value /wa/e/i/u/, never in the value /pe/i/. Since there is no graphic contrast between /b/ and /p/ in this series, I have in this book transliterated the signs BE and BI with their *p*-value: *pì* and *pí*, respectively. See below for a treatment of the vocalic parts of these signs.

Labials + u: The cuneiform script knows only a single sign, BU/PU, to denote the syllables /pu/ and /bu/, which cannot therefore in principle be distinguished from each other on the basis of the spelling alone. In this book I have consistently transliterated the sign BU/PU as *pu*.

Dentals + a: In the Old Assyrian texts the sign TA is the sign that is usually used to render the syllables /ta/³⁷ and /ṭa/³⁸ (in which case it is transliterated *tá*) whereas its usage in the value /da/³⁹ (in which case it is transliterated *dá*) is much rarer. The sign DA is the usual choice for spelling the syllable /da/,⁴⁰ whereas its use to denote the syllables /ta/⁴¹ and /ṭa/⁴² (in which cases it is transliterated *tá* and *ṭa*, respectively) is severely limited. As will be treated in more detail below (§ 3.2.10), also in the spelling of the Kanišite personal names there seems to be a complimentary distribution between the signs TA and DA, and I will in transliteration therefore keep them apart, and transliterate them as *ta* and *da*, respectively.

Dentals + e/i: Both the sign DÍ and the sign TI are in Old Assyrian used to denote the syllables /te/i/, /de/i/ as well as /ṭe/i/ (DÍ is in these values transliterated *té*, *tí*, *de*₈, *dí*, *ṭé*, and *ṭí*, whereas TI is transliterated *te*₉, *ti*, *dè*, *dì*, *ṭe*₆, and *ṭì*, respectively). There seems to be no consistent phonetic distinction between the two.⁴³ The sign TE occurs only rarely in the Old Assyrian texts, and is then only used in the value /te/. Since this sign is not used in any of the Kanišite personal names, we can leave it out of consideration. Since the signs DÍ and TI

36 Also the sign NE occasionally occurs in the Old Assyrian texts with the value /bi/ (and is than transliterated *bí*), e.g. in the word *qí-bí-ma* 'speak' (e.g. AAA 1/3, 02: 2). Since this sign is not used in the spelling of Kanišite personal names, however, I will leave it out of consideration.

37 In the CDLI-corpus it is attested in this value ca. 7,500 times.

38 In the CDLI-corpus it is attested in this value ca. 350 times.

39 In the CDLI-corpus it is attested in this value ca. 90 times.

40 Ca. 3,200 times in the CDLI-corpus.

41 Ca. 60 times in the CDLI-corpus.

42 Ca. 40 times in the CDLI-corpus.

43 Dercksen 2000: 137¹¹ has noted that in ICK 4, I 434 there seems to be a distinction between the two signs, however, since in this text DÍ is consistently used for /di/ and TI for /ti/.

do not seem to have been used in a distinctive way,⁴⁴ I will in this book transliterate them both with their *t*-value, *tí* and *ti*, respectively. For a discussion of the vocalic part of their value, see below.

Dentals + u: The sign DU is the normal sign to denote the syllables /tu/, /du/ and /tu/ (in which cases it is transliterated *tù*, *du*, and *tù*, respectively). The sign TU occurs as well, but is more seldom used and only denotes the syllable /tu/.⁴⁵ As far as I am aware, the sign TU does not occur in the spelling of Kanišite names,⁴⁶ and I will in this book therefore transliterate the sign DU with its more neutral *t*-value: *tù*.

Velars + a: The sign GA is the default sign to denote the syllables /ka/,⁴⁷ /ga/, and /qa/ (and is then transliterated *kà*, *ga*, and *qá*, respectively). The sign KA occurs in Old Assyrian as well, but is rare, and is practically only used with the value /ka/.⁴⁸ Since the sign KA is not used in the spelling of Kanišite personal names, I have in this book chosen to consistently transliterate the sign GA with its *k*-value: *kà*.

Velars + e/i: The sign KE/KI is the default sign to spell the syllables /ke/i/⁴⁹ and /qe/i/⁵⁰ (in which values it is transliterated *ke*, *ki*, *qé* and *qí*, respectively). It can also be used to spell the syllables /ge/i/⁵¹ (in which case it is transliterated

44 According to Kouwenberg 2017: 17 the sign TI is mainly used in early texts, which could point to a chronological distinction between the two. Kryszat 2008a: 232–3 argues that the sign DÍ belongs to the inventory of less complex “group A” signs (including LÁ and ÁB), whereas TI belongs to the more complex “group B” signs (including LA and AB). The distinction in usage between DÍ and TI would thus reflect the level of literacy of the person writing, but has no bearing on their phonological interpretation.

45 In the CDLI-corpus, the value /tu/ is expressed by the sign DU ca. 4,000 times, and by the sign TU only ca. 240 times. Note that in the majority of cases, the sign TU occurs in the names ^(d)mar-tu, ^(d)mar-tu-ba-ni and puzur₄-SA.TU.

46 Albayrak (2005 [2006]: 98) reads “*Tu-ut-ḫi-li-a*”, with the sign TU, for kt c/k 1641: 19, but the photograph of this tablet (*ibid.*: 103) shows as its first sign a clear DU = *tù* rather than TU. In all other attestations this name is spelled *tù-ut-ḫ*^o, as well.

47 In the CDLI-corpus, it occurs in this value ca. 6,200 times.

48 In the CDLI-corpus, it occurs in this value ca. 60 times. A value /qa/ seems to be present in CCT 1, 18a: 6, where we read *qà-du-um* ‘including’ (note that Hecker aATU incorrectly transliterates “*qá-du-um*”). Interestingly, the same word is written *qá-du-um* (i.e. with GA) in *ibid.* 3.

49 In the CDLI-corpus, the sign KE/KI is used in the value /ke/ ca. 5,200 times, and in the value /ki/ ca. 990 times.

50 In the CDLI-corpus, the sign KE/KI is used in the value /qe/ ca. 2,340 times, and in the value /qi/ ca. 3,200 times.

51 In the CDLI-corpus, the sign KE/KI is used in the value /ge/ 7 times, and in the value /gi/ ca. 120 times.

*ge*₅ and *gi*₅, respectively), but the syllable /gi/ is just as often spelled with the sign GE/GI.⁵² Conversely, the sign GE/GI is hardly ever used to spell the syllable /ke/i/ (in which values it is transliterated as *ké* and *kí*).⁵³ In other words: although the sign KE/KI can spell both voiceless /k/ and voiced /g/ (and emphatic /q/), the sign GE/GI in principle only spells voiced /g/. Since both the sign KE/KI and GE/GI are found in the spelling of Kanišite personal names and the difference between the two potentially reveals phonologically important information, I will transliterate the sign KE/KI with its *k*-value, *kí*, and the sign GE/GI with its *g*-value, *gi* (see below for a treatment of the vocalic part of their values).

Velars + u: The sign KU is in Old Assyrian texts the default sign to denote the syllables /ku/, /gu/ and /qu/ (in which values it is transliterated *ku*, *gu*₅ and *qu*). The sign GU occurs as well, albeit much less often, and is only used to denote the syllable /gu/.⁵⁴ In the Kanišite personal names the sign GU is never used, so it is safe to transliterate the sign KU as *ku* only.

3.1.2 *The Spelling of Sibilants and Affricates*

In the past years it has become generally accepted that the Akkadian phonemes *s*, *z*, and *š* were in fact affricates,⁵⁵ probably [tʃ], [dʒ], and [tʃʲ], respectively.⁵⁶ In Old Assyrian, these three phonemes were hardly distinguished in spelling.

When combined with the vowel *a*, we see that both /za/ = [dʒa] and /ša/ = [tʃʲa] are spelled with the same sign, namely ZA, which can be read *za* as well as *ša*. The syllable /sa/ = [tʃsa] is sometimes spelled with the sign DI, which can be read *sá* (ca. 270 times in CDLI), but in the bulk of the cases it is spelled with the sign ZA, which is then read *sà* (ca. 1,100 times in CDLI).⁵⁷ In Kanišite names, the sign DI (= *sá*) does not occur, so we only find the sign ZA there. I will therefore always transliterate it with *za*, but in my phonological analysis in principle render it as /tʃsa/.

52 In the CDLI-corpus, the sign GE/GI is used in the value /gi/ ca. 120 times.

53 In the CDLI-corpus, the sign GE/GI is used in the value /ke/ once, and in the value /ki/ 3 times.

54 Note that in the CDLI-corpus GU is found ca. 40 times, whereas the sign KU in the value /gu/ occurs ca. 240 times.

55 Cf. Kogan 2011: 66–7, with references.

56 Cf. also Kouwenberg 2017: 48.

57 The separate sign SA occurs ca. 110 times in CDLI, but these are all either typos, or occur in the logographic part of the personal name *puzur-SA.TU-e* (p.c. G. Barjamovic). The sign SA therefore does not seem to be used in the value /sa/ = [tʃsa].

When combined with the vowels *e/i*, we find a similar situation. In order to spell the syllables /se/ = [fse] and /si/ = [fsi], in Old Assyrian texts the sign ZE/I is used, which is then read *sé* (24 times in CDLI) and *sí* (1,270 times in CDLI).⁵⁸ This sign is also preferred when spelling the syllables /še/ = [fš²e] and /ši/ = [fš²i]; although the separate sign ŠE/I occasionally is used (24 times in the value *še*, 31 times in the value *ši*), in the bulk of the cases these syllables are spelled with the sign ZE/I, which can then be read *šé* (ca. 1,520 times in CDLI) and *ší* (ca. 2,160 times in CDLI), respectively. Also for writing the syllables /ze/ = [dze] and /zi/ = [dzi] the sign ZE/I is always used (in CDLI, 11 times as *ze*, and ca. 1,440 times as *zi*). In the Kanišite names, the sign ŠE/I is not used, only ZE/I. Although this sign can in principle be read *sé*, *sí*, *šé*, *ší*, *ze* and *zi*, I will transliterate it as *zi* (see below for the reason why I will transliterate it with the vowel *i*), and in my phonological interpretation in principle render it as /tsi/.

The same goes for the position before *u*. Although the syllable /su/ = [fsu] is in Old Assyrian texts sometimes spelled with the sign SU (36 times⁵⁹ in CDLI), it is almost always spelled with the sign ZU, which is then transliterated *sú* (ca. 1,350 times in CDLI). The syllable /zu/ = [dzu] is always spelled with the sign ZU (ca. 1,600 times in CDLI).⁶⁰ And the syllable /šu/ = [fš²u] is occasionally spelled with the sign ŠU (36 times in CDLI), but in the vast majority of cases it is written with the sign ZU, which is then read *šú* (ca. 1,350 times in CDLI). In the Kanišite names, the signs SU and ŠU are not used, only the sign ZU is found. I will transliterate this sign as *zu*, and in my phonological analyses in principle render it as /tsu/.

When it comes to the phoneme *š*, there is some debate about its phonetic rendering in the different Akkadian dialects, although in the case of Old Assyrian, consensus nowadays has it that it was realized as an alveolar fricative [s].⁶¹ When it comes to spelling, the syllables /ša/ = [sa] and /šu/ = [su] are always spelled with the signs ŠA and ŠU, respectively. The syllables /še/ = [se] and /ši/ = [si], however, are in principle always spelled with the sign SE/I, which is

58 In CDLI we find seeming attestations where the sign SE/I is used (20 times *si*, 4 times *se*), but Jan Gerrit Dercksen (p.c.) informs me that these are all typos.

59 But Jan Gerrit Dercksen (p.c.) informs me that most of the attestations of *su* in CDLI are in fact typos for *sú*.

60 CDLI cites one occurrence of “*zú*” (= KA), namely for kt c/k 241: 7. The editor of this text (Uzunaliმოğlu 1990[1992]: 48) rather reads this sign as *sú* (= ZU), however, which indeed fits the hand copy (*ibid.*: 52).

61 Kogan 2011: 88–9; Kouwenberg 2017: 48–9.

then read *šé* (ca. 2,800 times in CDLI) and *ší* (ca. 5,500 times in CDLI).⁶² In the treatments of Kanišite names I will therefore transliterate it as *ší* (see below for the choice for the vowel *i*). Since the Old Assyrian phoneme /š/ phonetically probably was [s], I will in my phonological interpretation of the Kanišite names render the š-signs with an /s/ (e.g. *ḥaštaḥšu* = /hstahsu/).

3.1.3 The Spelling of the Vowels *e* and *i*

A distinction between the vowels /e/ and /i/ is in the Old Assyrian texts only consistently marked in the *V*-signs, namely with the use of the signs E and I. In the *CV* and *VC*-signs the two vowels are hardly kept apart.

Labial + e/i: Although in the Old Assyrian texts both the sign BE and the sign BI are employed, they are not consistently kept apart regarding their vocalic value. The sign BE, which can be used to denote the syllables /pe/ and /be/ (in which values it is transliterated *pè* and *be*, respectively), can also be used for denoting the syllables /pi/ and /bi/ (in which case it is transliterated *pì* and *bi*, respectively), e.g. *qí-bi₄-ma* ‘speak!’ (kt 98/k 118 [1b]: obv. 1). Conversely, the sign BI, which can be used in the value /pi/ and /bi/ (in which case it is transliterated *pí* and *bi*, respectively), can also be used in the values /pe/ and /be/ (then transliterated as *pé* and *bé*, respectively), e.g. *bé-li-a* ‘my lord’ (ATHE 44: rev. 5). In the Kanišite names, the signs BE and BI seem to be used interchangeably. For instance, in kt c/k 1637 we come across a woman whose name is spelled *šu-BE-a-ni-kà* (line 10) as well as *šu-BI-a-ni-kà* (lines 5, 7). Likewise in BIN 6, 226t, where we find an individual whose name is spelled *šu-BE-a-aḫ-šu* (line 8) as well as *šu-BI-a-aḫ-šu* (line 16). Similarly, the name that in Ḫattuša is spelled *ṁšu-up-pí-u-ma-an* occurs in Old Assyrian as *šu-BE-ú-ma-an* (kt 99/k 138b [1b]: rev. 8; kt r/k 15 [1b]: 31) as well as *šu-BI-ú-ma-an* (AuOr 8, 197–205: 7). In the remainder of this book I will therefore not distinguish between these two signs and both transliterate them with their *i*-value, namely as *pì* (= BE) and as *pí* (= BI), respectively (cf. above for the reason for transliterating these signs with the voiceless stop *p*). This does not say anything on the underlying phonological vowel, however; this could have been /i/ as well as /e/.

Dental + e/i: Both the sign DÍ and the sign TI are in Old Assyrian used to denote the syllables /t/d/te/ as well as /t/d/ti/ (DÍ is in these values transliterated *té*, *de₈*, *té*, *tí*, *dí*, and *tí*, whereas TI is transliterated *te₉*, *dè*, *te₆*, *ti*, *dì*, and *tì*, respectively): there seems to be no consistent distinction between the two.⁶³

62 The sign ŠI only occurs in the pseudo-logogram ^(d)UTU-ši = *šamši* ‘my Sun-god’. The sign ŠE is extremely rare.

63 But cf. footnotes 43 and 44.

I will in this book transliterate the signs DÍ and TI with their *i*-value only: *tí* and *ti*. The sign TE occurs only rarely in the Old Assyrian texts, and is then exclusively used in the value /te/. This indicates that the Assyrian scribes did in principle have the possibility to distinguish between the vowel *e* and *i* in the dental CV-series, but in practice hardly ever did so. In the spelling of Kanišite names the sign TE is not used, but this does not say anything on the presence or absence of a phonemic vowel /e/ after dentals. Since the signs DÍ and TI are used to denote *dental stop* + /e/ as well, they can in principle denote both the vowel /i/ and the vowel /e/.

e/i + *dental nasals*: The sign IN is used in Old Assyrian both in the value /in/ (ca. 1,740 times in CDLI) and /en/, then transliterated *en*₆ (ca. 1,900 times in CDLI). However, the sign EN is used as well, virtually always to denote the syllable /en/ (ca. 1,780 times in CDLI), although a few times it is used in the value /in/ as well, then transliterated *in*₄ (44x in CDLI). This means that, although the use of the sign IN is ambiguous (it can denote both /in/ and /en/), the sign EN in principle clearly points to *e*-vocalism. In the Kanišite names I will therefore transliterate EN with its *e*-value, *en*, whereas IN is transliterated with its *i*-value, *in* (which does not exclude the possibility that it represents an underlying /en/).

Other consonants + *e/i*: Also for the other consonants no systematic distinction between the vowels *e* and *i* is made, also when the cuneiform script in principle had the means to do so. For instance, although the cuneiform script knows a sign ME besides a sign MI, in Old Assyrian only the sign ME is used for denoting both the syllable /me/ and the syllable /mi/ (in which case it is transliterated *mì*); etc. I have therefore chosen to transliterate all these signs in principle with their *i*-value: *gi, ĥi, ki, li, mî, ri, ší, zî*. This also goes for the majority of VC-signs, which I will transliterate as *iĥ, ik, il₅, im, ip, ir, iš, it, iz* (and not with their *e*-values). Only if there are specific reasons for a different transliteration (like in the case of names ending in *-mei*, cf. § 5.2.11), I will use an *e*-vowel.

Note that the sign PE/I, which can have the values *we* (220 times in CDLI) and *wi* (ca. 800 times in CDLI), can also denote the values *wa* (ca. 3,040 times in CDLI) and *wu* (ca. 110 times in CDLI). Since *wa* is by far the most common reading, I will in the Kanišite names in principle transliterate PE/I with the value *wa*, too, unless there are good reasons to do otherwise, like in the names ending in *-ašue*, cf. § 5.2.5.

3.1.4 Overview of the Transliteration of Signs

In the following tables an overview of the CV- and VC-signs as used in the spelling of the Kanišite personal names is given (the signs themselves have been copied from Thureau-Dangin 1928 (= TC 2): 4–6). The transliteration that

is placed next to each sign is the one given in this book, although the reader can easily find which other values the signs can represent when they are used in the spelling of Old Assyrian words. For instance, the sign  is in this book transliterated as *tù*, although in the spelling of Old Assyrian words it can be used for the values /tu/ and /du/ as well.

	-a	-e	-i	-u
Ø-	 a	 e	 i	 ú
p- b-	 pá	 pí,  pì		 pu
t- ṭ-	 ta	 tí		 tù
d-	 da			
k- q- g-	 kà	 ki		 ku
		 gi		
ḥ-	 ḥa	 ḥi		 ḥu
l-	 la,  lá	 li		 lu
m-	 ma	 mì		 mu
n-	 na	 ni		 nu
r-	 ra	 ri		 ru
š-	 ša	 ší		 šu
w-	 wa / we / wi / wu			
s- ṣ- z-	 za	 zi		 zu

	<i>a-</i>	<i>e-</i>	<i>i-</i>	<i>u-</i>
-Ø	 <i>a</i>	 <i>e</i>	 <i>i</i>	 <i>ú</i>
-p -b	 <i>áp</i>	 <i>ip</i>		 <i>up</i>
-t -ṭ -d	 <i>at</i>	 <i>it</i>		 <i>ut</i>
-k -q -g	 <i>ak</i>	 <i>ik</i>		 <i>uk</i>
-ḥ	 <i>aḥ / eḥ / iḥ</i>			 <i>uḥ</i>
-l	 <i>al</i>	 <i>il</i> ,  <i>il₅</i>		 <i>ul</i>
-m	 <i>am</i>	 <i>im</i>		 <i>um</i>
-n	 <i>an</i>	 <i>en</i>	 <i>in</i>	 <i>un</i>
-r	 <i>ar</i>	 <i>ir</i>		 <i>ur</i>
-š	 <i>áš</i>	 <i>iš</i> ,  <i>iš</i>		 <i>uš</i>
-w	—			
-s -š -z	 <i>az</i>	 <i>iz</i>		 <i>uz</i>

Having determined the transliteration of the signs that are used in the spelling of the Kanišite personal names, we will now look more closely into other kinds of problems regarding the interpretation of the phonological shape of the names.

3.2 Spelling Alternations in Names

Among the list of Kanišite names, we often find pairs (or even triplets and quadruplets) of names that greatly resemble each other. For instance, next to

the name *šaḥišnuman* (m.) we also find the name *šihišnuman* (m.); besides *arawarḥamina* (m.) we find *arawarḥumina* (m.); besides *tuthalia* (m.) we find *tuthilia* (m.); etc.

Of course, one could say that this is just a matter of coincidence, and that, to take the first example, there just happens to be a name *šaḥišnuman* as well as a name *šihišnuman*, and that these two have nothing to do with each other. However, for some of such pairs we know that this cannot be the case.

Take for instance the text AKT 10, 35, which is a debt-note that is attested on a tablet as well as on the envelope encompassing it. On the tablet, the name of the debtor, a woman, is spelled *a-ša-al-kà* (line 6). On the envelope, however, her name is spelled *a-šī-il₅-kà* (line 7, 15). Apparently, the name of this woman contained a sound or a sequence of sounds that could not be written in the cuneiform script in a single, unified way. We may, for instance, assume that the name contained a consonant cluster, and underlyingly was /aslka/ or similar. The point is, however, that in this case we are certain that the two different spellings, *ašalka* and *ašilka*, refer to a single name. Other such cases are for instance *arawarḥina* and *arawurḥina* (both referring to a single man on TC 1, 100), *arkalia* and *arkulia* (both referring to a single man on AKT 1, 48), *tamria* and *tamuria* (both referring to a single man on CTMMA 1, 90), *zapizapi* and *zipizipi* (both referring to a single woman on kt 88/k 990), and the triplet *waršama*, *warāšma* and *waršuma* (all three referring to a single king of Kaniš).

These examples show that the cuneiform script as used by the Assyrians was not always apt to write the Kanišite personal names, and that sometimes several different spellings could be employed to render a single name. I therefore take as a working hypothesis that whenever we find two (or more) very similar but nevertheless differently spelled names, these spellings may represent a single underlying phonological form, also in cases where we cannot strictly prove that the different names refer to a single person. To my mind, this hypothesis is supported by the fact that in many cases the difference between these spellings is the same as the differences between the spellings of the pairs or triplets of names of which we are certain that they represent a single name. For instance, the alternation between *a* and *i* as found in the certain cases *ašalka* / *ašilka* and *zapizapi* / *zipizipi* is also found in the pairs *šaḥišnuman* / *šihišnuman*, *ḥaštaḥšu* / *ḥištaḥšu*, *šakriuman* / *šikriuman*, etc. I therefore regard it extremely likely that also in each of these latter pairs the individual members refer to a single name that had an underlying phonological form that could not be properly written down in the cuneiform script.

For a good understanding of the phonology of the Kanišite names, a thorough treatment of these spelling alternations is therefore of a paramount importance.

3.2.1 The Spelling Alternation *a/Ø*

As mentioned above, one of the kings of Kaniš who is attested several times in the Old Assyrian texts (reigned ca. 1775–1750 BCE), has a name that is sometimes spelled *waršama*⁶⁴ and sometimes *warašma*⁶⁵ (and sometimes also *waršuma*, which will be treated in § 3.2.4). We see that in the former form an *a* is spelled between the *š* and the *m*, which is absent in the latter one, whereas in the latter form an *a* is spelled between the *r* and the *š*, which is absent in the former one. There can to my mind therefore be no doubt that in both cases the *a* is a so-called ‘dead’ vowel,⁶⁶ and is only employed to be able to write an underlying consonant cluster: /warsma/. It should be stressed that in this case we are certain that both spellings represent a single individual, and that this analysis therefore is the only way to explain the two spellings.

A similar case is in my opinion formed by the names *walḥašna* (m.)⁶⁷ and *walaḥšina* (m.),⁶⁸ which stand next to a third spelling variant, *walḥišna* (m.), which will be treated below, in § 3.2.2. Although it cannot be proven in the strict sense that these spellings represent a single name, it seems unlikely to me that there would be three names containing the consonants *w*, *l*, *ḥ*, *š* and *n*, in this order, that have nothing to do with each other. In the first form, *walḥašna*, we find an *a* between the *ḥ* and the *š*, which is absent in the second one, *walaḥšina*, whereas in this latter form we find an *a* between the *l* and the *ḥ*, which is absent in the former one. It therefore seems attractive to me to assume that here, too, these *a*’s are in fact dead vowels, and that these spellings represent a single underlying form that contained a cluster /lhs/. For the interpretation of the *i*’s in the forms *walaḥšina* and *walḥišna*, cf. § 3.2.2 below, where a full treatment of this name will be given.

Another interesting pair is *ušḥupa* (m.)⁶⁹ vs. *wašḥupa* (m.)⁷⁰. Again, it cannot be strictly proven that these two forms represent a single underlying name, but to my mind it seems very likely that they are related to each other. Especially when taking into account that the difference between the two, namely an

64 *wa-ar-ša-ma* (KTP 43 [1b]: 19 (-š[a]-); kt n/k 31 [1b]: rev. 14 (-š[a-ma])).

65 *wa-ar-áš-ma* (kt 89/k 383a [1b]) (Günbatt 2014, nr. 12): 35; kt 89/k 383b [1b] (Günbatt 2014, nr. 13): 31; kt 99/k 138a [1b]: 14 ([w]a-); kt 99/k 138b [1b]: rev. 4).

66 Such ‘dead’ vowels are well known from e.g. Hittite, where we find, for instance, the spellings *pár-ḥa-zi* besides *pár-aḥ-zi* to denote an underlying /parhtsi/ ‘he chases’, cf. Kloekhorst 2008: 20.

67 *wa-al-ḥa-áš-na* (AKT 10, 32a: 17; AKT 10, 32b: 1; AKT 10, 47b: 8; AKT 10, 55a: 17; AKT 10, 55b: 3 (w[a-a]l-ḥ[a]-); kt c/k 1635: 3, 8; kt n/k 73: 4; kt n/k 74: 3 (-n[a]); kt n/t 2100: 2, 5; kt t/k 32: 6; kt 91/k 284: 9; kt 94/k 1096: 4).

68 *wa-lá-aḥ-ší-na* (KTS 1, 46a: 3, 8; KTS 1, 46b: 3).

69 *uš-hu-pá* (KTH 28a: 3, 6, 12; KTH 28b: 5, 9, 12, 20).

70 *wa-áš-hu-pá* (AKT 10, 43b: 2; TC 3, 253: 1; kt c/k 1639b: 26).

alternation in spelling between word-initial uC° and waC° , is also found in the pairs *ušinuman* (g.u.) vs. *wašinuman* (m.).⁷¹ and *utniaḥšu* (g.u.) vs. *watniaḥšu* (g.u.).⁷² I therefore assume that in all these cases the *a* in waC° is a dead vowel, and that the names underlying these spellings start in a cluster $/wC^\circ/$: $/wshupa/$, $/wsinoman/$,⁷³ and $/wtניהhsu/$, respectively.⁷⁴

Also the pair *ḥašušar* (f.) and *ḥašušra* (f.)⁷⁵ is interesting. Both names refer to women, and it seems therefore legitimate to assume that they represent a single name. Since the *a* that is spelled between the *š* and the *r* of *ḥašušar* is absent in *ḥašušra*, whereas the *a* that is spelled after *r* in *ḥašušra* is absent in *ḥašušar*, we may assume that both *a*'s are dead vowels, and that the underlying form of this name ended in a cluster $/-sr/$ (cf. § 5.2.7, where it will be argued that this is etymologically attractive as well).

Similar lines of reasoning may also be used for names that are not full pairs. Take for instance the names *kikaršan* (m.) and *kikarašnaḥšu* (m.).⁷⁶ Although these names do not form a real pair, it is clear that the initial part of *kikarašnaḥšu* resembles *kikaršan* to a large extent. Even more so when taking into account that $-(a)ḥšu$ is an element that is found in many names, which indicates that *kikarašnaḥšu* consists of two elements, *kikarašn-aḥšu*. When comparing the element *kikarašn-* to the name *kikaršan*, we again see that the former form contains an *a* that is absent in the latter, and vice versa. When these two *a*'s are regarded as dead vowels, the outcome is that the spellings *kikaršan* and *kikarašn-* represent an underlying form that ended in a consonant cluster: $/kikarsn/$ (cf. § 5.3.70 for a treatment of the spelling *kikaršin*, which occurs as well).⁷⁷

71 Cf. footnotes 960 and 961 for attestations of these two names.

72 Cf. footnote 964 for an overview of attestations of these two names.

73 But cf. § 5.3.171. The assumption of an $/o/$ in the element *-uman* is based on its treatment in § 5.2.13.

74 Jan Gerrit Dercksen reminds me that the same interchange can be found in toponyms, e.g. *wašḥania* besides *ušḥania* (Nashef 1991: 136–7) or *waḥšušana* (Nashef 1991: 133–5) besides *uḥšušana* (kt c/k 74: 6, 12; c/k 373: 25; c/k 866: 33; c/k 542: 10). Moreover, it should be remarked that a similar phenomenon is found in Old Assyrian: e.g. *wardum* 'slave' is sometimes spelled *urdu* as well. The exact rationale of this spelling difference in Old Assyrian words is not yet clear, cf. Kouwenberg 2017: 76–7.

75 Cf. footnotes 618 and 619 for an overview of attestations of these two names.

76 Cf. footnote 713 and 714 for an overview of attestations of these two names.

77 A more difficult case is formed by the following pair of names. On the tablet OIP 27, 49a, a woman named *i-la-li-il₅-kà* (line 4) is mentioned, whose name on the corresponding envelope is spelled *i-[l₅]-l₅-al-kà* (OIP 27, 49b: 9). If the *a* that is present in the latter form is to be regarded a dead vowel because it is seemingly absent in the former form, we may have to analyse this name as $/ilalylka/$. However, as I will argue below, it is more likely

3.2.2 The Spelling Alternation *i/Ø*

In the pair *walḥašna* (m.) and *walaḥšina* (m.), which was mentioned in the preceding section as well, we see that the latter form shows an *i* between the *š* and the *n*, whereas the former form has no vowel between these consonants. A third spelling variant is *walḥišna* (m.),⁷⁸ where we find an *i* between *ḥ* and *š*, where the second form has nothing, and the first one has *a*.

The *i*'s that are present between the *š* and the *n* in *walaḥšina* and between the *ḥ* and the *š* in *walḥišna* are remarkable. They can hardly have been phonologically real vowels since they alternate with the absence of a vowel in the other spellings of this name. However, it is also difficult to interpret them as a dead vowel since, as we have seen above, it is the vowel *a* that seems to be used in cuneiform writing as the default vowel when spelling large consonant clusters. I therefore assume that the *i*'s represent vowels that in the pronunciation of this name sometimes were used, but were subphonemic. This would mean that the name /walhsna/ was usually pronounced [walhsna] (spelled *walḥašna*), but could be pronounced [walhs_ina] (spelled *walaḥšina*) and [walḥ_isna] (spelled *walḥišna*) as well.

One could argue that the forms with the *i* should be seen as younger outcomes of the form without the *i*, since we then can assume a phonetically regular anaptyxis in an original large consonant cluster. However, this assumption would require that the different spellings are distributed chronologically, which does not seem to be the case.⁷⁹ Moreover, the fact that the *i* appears in different places in the cluster ([walhs_ina] vs. [walḥ_isna]) may have to be interpreted as an indication that the anaptyxis in this cluster had not yet been settled, and therefore must be viewed as subphonemic.⁸⁰

that we are dealing with an alternation between an element /ilalia-/ and /ilalie-/ (which means that *i-la-li-il₅-kà* should be read *i-la-li-el-kà*), cf. § 5.3.57 for details.

78 *wa-al-ḥi-iš-na* (AKT 8, 161a: 3 (*wa-al-ḥi*[-...])); AKT 8, 161b: 3; AKT 10, 24b: 13; AKT 10, 26a: 3; AKT 10, 26b: 5, 8; AKT 10, 33a: 27 (<*na*>); AKT 10, 33b: 1; AKT 10, 43b: 4 (*w[a-al-ḥ]i*); AKT 10, 52: 4, 9; AKT 10, 61a: 2; AKT 10, 61b: 6, 9; BIN 6, 193: rev. 13 ([*wa-a*]l-); CTMMA 1, 78a: 1, 4; CTMMA 1, 78c: obv. 2; ICK 1, 190: 25 (<*na*>?); ICK 2, 127: left edge 2; KTH 36: 9 (*-ḥi²-iš²-na²*); kt c/k 1634: 6; kt n/k 76: 10; kt 87/k: 3, 8).

79 Gojko Barjamovic (p.c.) informs me that most of the texts in which these names are attested can be dated to the period REL 80–110 (the period from which the bulk of the Old Assyrian tablets stem, cf. Barjamovic, Hertel & Larsen 2012: 56), which means that the different spellings are used contemporaneously and are not chronologically distributed. Nevertheless, I think it would certainly be worthwhile to execute a detailed study of the chronology of the spelling variants of certain names, taking into account the newest insights into the dating of the Old Assyrian texts – a task that fell outside the scope of the project that led to the present book.

80 However, the concept of regular anaptyxis in consonant clusters as a diachronic phenomenon may have some merit for other names, cf. § 5.3.62.

A similar phenomenon may be present in the names *ušinuman* (g.u.) and *wašinuman* (m.), which were treated above as well, and which may stand beside the form *ušnuman* (m.).⁸¹ If these three forms can indeed be regarded as representing a single underlying name, we may assume that that name must have had the phonological shape /wsnoman/, which in principle was pronounced [wsnoman], spelled *ušnuman*. Sometimes, however, its initial consonant cluster received a subphonemic, anaptyctic vowel *i*, yielding the pronunciation [ws_inoman], spelled *ušinuman* as well as *wašinuman*.

A slightly different kind of alternation between *i* and *Ø* may be represented by the names *išpunaḥšu* (m.) and *šapunaḥšu* (m.).⁸² If we are allowed to assume that these two spellings represent a single underlying name, we see that the latter spelling shows an *a* between the *š* and the *p* that is absent in the former, and which therefore may be regarded as a dead vowel, pointing to an initial cluster /sp-/. The former spelling, in its turn, shows an *i* in front of the *š* that is absent in the latter. I therefore assume that here, too, the *i* is a subphonemic, anaptyctic vowel, albeit that in this name it does not manifest itself inside a consonant cluster, but rather in front of it. So, both names would represent an underlying form /spunahsu/, which could be pronounced [spunahsu] (spelled *šapunaḥšu*) as well as [i:spunahsu] (spelled *išpunaḥšu*). Note that the assumption that in this case the anaptyctic vowel *i* develops in front of the word-initial cluster /sp-/ has a good parallel in other languages that were and are spoken in Anatolia, where a regular prothesis of *i* before word-initial clusters of the shape sC- can be found, cf. Hitt. *iškār*- ‘to prick’ < PIE **skór*- or Turkish *istasyon* ‘station’, which is borrowed from French *station*.

3.2.3 The Spelling Alternation *a/i*

In the preceding sections we have seen that the *a* that is present between the *ḫ* and the *š* in the name *walḫašna* (m.) probably was a dead vowel, and was only used to be able to write an underlying cluster /lhsn/. This contrasts with the *i* that is present between these consonants in the spelling *walḫišna* (m.), which has been interpreted as the rendering of a phonetically real vowel that was sometimes, subphonemically, used in the pronunciation of the cluster /lhsn/, which was then uttered as [lh_isn] (similarly in the spelling *walaḫšina* (m.), which probably represents the pronunciation [lh_in]). To my mind, this explanation for the alternation between *a* and *i* in *walḫašna* vs. *walḫišna* (vs. *walaḫšina*) can also be used for other pairs of names where *a* and *i* alternate.

81 *uš-nu-ma-an* (VS 26, 100: 3, 6, 15).

82 Cf. footnote 690 for an overview of attestations of these two names. Cf. § 3.2.4 for a treatment of a third variant, *šupunaḥšu*.

This means that, for instance, the pair *arzanaḥṣu* (m.) / *arziṇaḥṣu* (g.u.) can now be interpreted as representing an underlying form /artsnəhsu/ that sometimes was pronounced [arts_inahsu]. Likewise the pair *ḥaṣṭaḥṣu* (m.) / *ḥiṣṭaḥṣu* (m.), which can now be interpreted as /hstəhsu/, which sometimes was pronounced [h_istəhsu]. I have listed all these pairs and triplets in the following table:⁸³

Spellings	Phonological interpretation	Phonetic realizations
<i>arzanaḥṣu</i> (m.) / <i>arziṇaḥṣu</i> (m.)	/artsnəhsu/	[artsnəhsu] or [arts _i nahsu]
<i>aṣṭalka</i> (f.) / <i>aṣṭilka</i> (f.)	/aṣṭalka/	[aṣṭalka] or [aṣṭilka]
<i>aṣṭkunanika</i> (f.) / <i>iṣṭkunanika</i> (f.)	/skunanika/	[skunanika] or [iṣkunanika]
<i>ḥarṣumalka</i> (g.u.) / <i>ḥarṣumnalka</i> (f.) / <i>ḥarṣumilka</i> (f.) ^a	/harsumnalka/	[harsumnalka] or [harsumn _i lka]
<i>ḥaṣṭaḥṣu</i> (m.) / <i>ḥiṣṭaḥṣu</i> (m.)	/hstəhsu/	[hstəhsu] or [h _i stəhsu]
<i>ḥaṣṭaḥṣuṣar</i> (f.) / <i>ḥiṣṭaḥṣuṣar</i> (f.)	/hstəhsusar/	[hstəhsusar] or [h _i stəhsusar]
<i>kikarṣan</i> (m.) / <i>kikarṣin</i> (g.u.)	/kikarsn/	[kikarsn] or [kikars _i n]
<i>nakilie/at</i> (m.) / <i>nikilie/at</i> (m.) ^b	/nkilie/at/	[nkilie/at] or [n _i kilie/at]
<i>ṣaḥiṣṇuman</i> (m.) / <i>ṣiḥiṣṇuman</i> (m.)	/shisnuman/	[shisnuman] or [s _i hisnuman]
<i>ṣakrilka</i> (g.u.) / <i>ṣikrilka</i> (g.u.) ^c	/skrilkā/	[skrilkā] or [s _i krilkā]
<i>ṣakriuman</i> (m.) / <i>ṣikriuman</i> (m.)	/skriuman/	[skriuman] or [s _i krriuman]
<i>ṣamnuman</i> (m.) / <i>ṣimnuman</i> (m.)	/smnuman/	[smnuman] or [s _i mnuman]
<i>ṣaṣaḥṣuṣar</i> (f.) / <i>ṣiṣaḥṣuṣar</i> (g.u.)	/ssəhsusar/	[ssəhsusar] or [s _i səhsusar]
<i>ṣaṣalika</i> (f.) / <i>ṣiṣalika</i> (f.)	/ssalika/	[ssalika] or [s _i salika]
<i>tarikuda</i> (m./f.) / <i>tirikuda</i> (m.)	/trikuda/	[trikuda] or [t _i rikuda]
<i>tuthalia</i> (m.) / <i>tuthilia</i> (m.)	/tuthlia/	[tuthlia] or [tuth _i lia]
<i>walḥiṣṇa</i> (m.) / <i>walḥaṣṇa</i> (m.) / <i>walaḥṣina</i> (m.)	/walhsna/	[walhsna] or [walh _i sna] or [walhs _i na]
<i>zapizapi</i> (f.) / <i>zipizipi</i> (f.)	/tspitspi/	[tspitspi] or [ts _i pits _i pi]

a Cf. § 3.2.8 for the spelling of *-mn*-clusters.

b Cf. chapter 7 for a treatment of the alternation between *-iet* and *-iat*.

c Also once *zikrilka* (f.), cf. § 5.3.115.

83 Cf. the individual treatments of these names in section 5.3 for overviews of their attestations, as well as for a more detailed treatment of their phonological interpretation (the ones given here are only preliminary).

The pair *kimarnala* / *kimirnala* will in § 5.3.30 be explained as possibly showing a morphological alternation.

An interesting case is formed by the pair *a-ar-nu-a-šu* (KKS, 6a: 3) and *ir-nu-wa-šu* (KKS, 6b: obv. 4), which are used to refer to a single man. We may assume that the underlying form was /rnuasu/, which could be realized as [rnuasu], spelled *a-ar-nu-a-šu*, as well as [ᵣrnuasu], spelled *ir-nu-wa-šu*. However, the initial plene spelling in *a-ar-nu-a-šu* may also point to the presence of an initial *aleph* /ʔ/ (Kouwenberg 2017: 27), so that we can analyse this name as /ʔrnuasu/, which was realized as [ʔrnuasu] (*a-ar-nu-a-šu*) as well as [ᵣrnuasu] (*ir-nu-wa-šu*).

3.2.4 The Spelling Alternation u/Ø

As we have seen above, one of the rulers of Kaniš was called /warsma/, whose name was sometimes spelled *waršama* and sometimes *warašma*. A third spelling occurs as well, however, namely *waršuma*.⁸⁴ The *u* that in this latter form is present between the *š* and the *m* is remarkable. It cannot have been a phonologically real vowel since it alternates with the absence of a vowel in the spelling *warašma*. However, it can hardly be a dead vowel either since, as we have seen above, the vowel *a* is the one that seems to be used in cuneiform writing as the default vowel when large consonant clusters need to be written. I therefore assume that, just as *i*, the *u* represents a vowel that was sometimes used in the pronunciation of this name, but was subphonemic. In other words, the name /warsma/ was usually pronounced [warsma] (spelled *warašma* and *waršama*), but could be pronounced [wars_uma] as well (spelled *waršuma*).

A similar situation can be found in the name of one of the debtors mentioned on the debt-note CTMMA 1, 90. On the tablet itself his name is spelled *ta-mu-ri-a* (CTMMA 1, 90a: obv. 2), whereas on the corresponding envelope his name is spelled *ta-am-ri-a* (CTMMA 1, 90b: 2, 4).⁸⁵ Since we are certain that the tablet and the envelope refer to a single transaction, the two different spellings must represent the name of a single individual. In order to explain these

84 *wa-ar-šu-ma* (TC 1, 122 [1b]: rev. 8; kt r/k 15 [1b]: 27 (-[ma]); kt 77/k 136 [1b] (Günbattı 2014, nr. 11): 18 (-š_u-)).

85 Other attestations of this name are: *ta-am-ri-a* (AKT 3, 7: 4; ICK 1, 30a: 2, 6, 9; ICK 1, 30b: 5; ICK 1, 60: 5; kt a/k 114: 15; kt c/k 268: 6; kt c/k 782: 1, 3, 9; kt 87/k 39 [1b?]: 27), *ta-mu-ri-a* (AKT 10, 24a: 15; AKT 10, 24b: 1; AKT 10, 36a: 13; AKT 10, 36a: 1; AKT 10, 56a: 13; AKT 10, 56b: 3; AKT 10, 62a: 20; AKT 10, 62b: 2; BIN 4, 190: 4, 10; BIN 6, 193: 7 (*ta*?-); BIN 6, 226e: 4 (*t[a-mu-ri]-a*), 12; BIN 6, 226t: 4; CCT 5, 49d: 6; ICK 1, 19a: 3; ICK 1, 19a: 3; ICK 1, 19b: 24; ICK 1, 19b: 24; ICK 2, 36: 3; KKS 31a: 8; KKS 31b: 13; TC 3, 253: 14; TPAK 1, 93: 4; kt h/t 330 [1b]: 2, 7; kt m/k 102: 7; kt n/k 32 [1b]: 13 (-*ri*-<*a*>), 16, 42, 44, 48; kt o/k 40: 2, 6; kt s/t 92 [1b]: rev. 8; kt 88/k 1082: 5, 11; kt 88/k 1082: 5, 11; kt 88/k 1087: 2), *ta-mu-ur-i-a* (ICK 1, 117: 4; ICK 1, 129: 3), *ta-mu-ur-a* (TC 3, 237: 5). Other attestations of “Tamria” are cited by OAPD for the unpublished texts kt 86/k 40 and kt v/k 152, and of “Tamuria” for kt e/k 162+164; kt 87/k 281; kt 87/k 316; kt 93/k 941a-b; kt 94/k 136; and kt 94/k 463.

spellings, I assume that the underlying phonological shape of the debtor's name was /tmria/, which could be pronounced [tmria] as well as [tm_uria].⁸⁶

Another name pair in which *u* alternates with *Ø* is *šupunaḥšu* (m.) vs. *išpunaḥšu* (m.), which has the variant *šapunaḥšu* (m.) as well (cf. § 5.3.62 for a more detailed analysis, including overviews of attestations). As we have seen above already, the spelling alternation *išp-* vs. *šap-* was interpreted as representing an underlying word-initial cluster /sp-/, that could be pronounced with a prothetic *i*, [i_{sp}-]. The existence of the spelling *šupunaḥšu*, with an *u* between the *š* and the *p*, implies that this cluster could also be pronounced with an anaptyctic *u*, [s_up-]. The same would then go for the name *šupunuman* (m.), which forms a pair with *išpunuman* (m.): both represent an underlying /spunoman/, which could be pronounced [s_upunoman] as well as [i_{sp}unoman]. Similarly in the pair *šupudaḥšu* (m.) / *išpudaḥšu* (m.), which point to an underlying /spudahsu/, which could be pronounced [i_{sp}udahsu] as well as [s_upudahsu]. Cf. § 5.3.61 for a more detailed treatment of these names and § 3.2.6 for the relationship between the different kinds of anaptyxis.

3.2.5 The Spelling Alternation a/u

In the text TC 1, 100, we read about a couple that gets divorced, and the name of the husband is spelled *a-ra-wu-ur-ḫ[i-na]* (line 1) as well as *a-ra-wa-ar-ḫi-na* (line 13, 18). It is therefore certain that the two spellings refer to a single person and thus must represent a single underlying form. Since we have seen above that the vowel *a* can be used as a graphic vowel to write consonant clusters, and the vowel *u* is sometimes used as an anaptyctic vowel in the pronunciation of clusters, it seems justified to me to assume that the underlying form of this name was /arawrhina/, which, besides being pronounced [arawrhina], was sometimes pronounced [araw_urhina] as well.

One of the witnesses mentioned on the debt-note AKT 1, 48 is *ḫalkiašu*, who is the son of a man whose name is spelled *ar-ku-li-a* on the tablet (rev. 9), but *ar-kà-li-a* on the corresponding envelope (obv. 5). Since we find a similar alternation between *a* and *u* as in the case of *arawarḫina* / *arawurḫina*, I assume that also here we are dealing with an underlying name containing a large consonant cluster, /arklia/, which sometimes was pronounced [arklia], but could be pronounced with an anaptyctic vowel as well: [ark_ulia].

86 Note that an analysis of the name as /tamria/ cannot explain the presence of the spelling *tamuria*: in all other cases where we find an intervocalic biconsonantal cluster, no anaptyxis is attested. The only way in explaining the anaptyctic vowel in *tamuria* is, to my mind, assuming the presence of a triconsonantal cluster, /tmria/.

The same alternation between *a* and *u* is found in the pair *šapunaḥšu* (m.) / *šupunaḥšu* (m.), which has been treated above as well (because of their alternation with *išpunaḥšu* (m.)). As explained above, all forms point to an underlying form /spunahsu/, which could be pronounced [spunahsu] as well as [s_upunahsu] (but also [s_ipunahsu]).

3.2.6 *The Difference between the Anaptyctic Vowels i and u*

In the treatments above, I argued that whenever the vowel *i* alternates with *∅* or with *a*, it probably represents an anaptyctic vowel that is sometimes used in the pronunciation of large consonant clusters, but has no phonemic status: e.g. the spellings *walhišna* / *walaḥšina* / *walḥašna* represent /walhsna/, which could be pronounced [walhsna], [walh_isna] as well as [walhs_ina], respectively. The same was assumed whenever in spelling the vowel *u* alternates with *∅* or with *a*. I argued that this *u* represents an anaptyctic vowel, too, being sometimes used in the pronunciation of large consonant clusters, but not having a phonemic status: e.g. the spellings *waršama* / *warašma* / *waršuma* represent /warsma/, which could be pronounced [warsma] as well as [wars_uma]. The question now arises: why do we in some names find the anaptyctic vowel *i* and in others the anaptyctic vowel *u*?

When we look at the names that display the anaptyctic vowel *u*, we see that in the large majority of cases this *u* is adjacent to a labial consonant, namely *p*, *m* or *w*: [wars_uma], [tm_uria], [s_upudahsu], [s_upunuman], [s_upunahsu], and [araw_urhina]. The only exception is [ark_ulia], but, as will be argued in § 3.2.7, it is quite possible that this name contained a labiovelar stop, /ark^wlia/, and that the anaptyctic *u* stood beside a labial consonant as well: [ark^w_ulia]. When we look at the names that show an anaptyctic *i*, in the majority of cases this *i* stands besides a non-labial consonant: [arts_inahsu], [harsumn_ilka], [h_istahsu], [h_istahsusar], [kikars_in], [n_ikilie/at], [s_ihisnuman], [s_ikrilka], [s_ikriuman], [s_isahsusar], [s_isalika], [t_irikuda], [tuth_ilia], [walh_isna], [walhs_ina], [ws_inuman]. The only exceptions are [s_imnuman] and [tsipits_ipi], which both start in a cluster consisting of a sibilant and a labial consonant, but show the anaptyctic vowel *i*.⁸⁷ Similar word-initial clusters are found in [s_upudahsu], [s_upunuman] and [s_upunahsu], but here we find the anaptyctic vowel *u*. It is interesting that

87 A third exception may be formed by *ta-at-kà-pu-ú* (ICK 1, 35b: 13) and the form [...]x-ki-pu-uš as found on the corresponding envelope (ICK 1, 35a: 4). If the latter form indeed refers to the same individual as the former, we may have to read it as [ta-a]t-ki-pu-uš (thus e.g. Hrozný 1952 (ICK 1): 18; CDLI; aATU). This means that we should not only assume that it shows *a/i*-interchange vis-à-vis *ta-at-kà-pu-ú*, but also that its extra -š forms a Hittite genitive case ending (because it probably follows KIŠIB: [KIŠIB ta-a]t-ki-pu-uš 'seal of t'), cf. § 4.2.3. The broken state of ICK 1, 35a makes it difficult to ascertain the reality of this

these latter three names all show a *u* directly following the labial consonant, and we may therefore assume that this is relevant for the choice of *u* as the epenthetic vowel. If this is correct, we may propose the following complementary distribution between the anaptyctic vowels *i* and *u*. In principle, in all consonant clusters that receive a subphonemic, anaptyctic vowel, this vowel is *i*, unless any of the adjacent consonants is labial (*p*, *m*, *w* or *k^w*); then the anaptyctic vowel is *u*. This does not go for word-initial clusters of the shape /(<t)sC-/ , which always receive an *i*, also when the consonant following the /s/ is labial. Only when behind that labial consonant a *u* is present, the anaptyctic vowel between the /s/ and its following consonant is a *u*.⁸⁸

Because of this complementary distribution between *i* and *u*, we may assume that both vowels are in fact manifestations of a single, underlying sound, and it is reasonable to assume that this was a schwa, [ə]. This schwa would then have been perceived by the scribes of the texts as either *i* or *u* dependent on the phonetic environment it is in. This means that we can now assume that, for instance, the name /warsma/ could be pronounced [warsma] (spelled *warašma* and *waršama*), as well as [warsəma], but that the [ə] of the latter form was perceived as a rounded vowel because it was adjacent to a labial sound and was therefore written as *u*: *waršuma*. In all other cases, the [ə] was perceived as an unrounded vowel and was therefore written as *i*. For instance, the name /hstahsu/ could be pronounced [hstahsu] (spelled *ħaštaħšu*) as well as [həstahsu], which was spelled *ħištaħšu*, with *i*.

3.2.7 Other Kinds of Alternations: Labialized Consonants

In the marriage contract ICK 1, 3, we read about *ħatala*, daughter of *enišru*, who gets married to an Assyrian man called Lā-qēpum. This same *ħatala* receives several letters from her husband Lā-qēpum, namely CCT 3, 50a and BIN 4, 228. In all three documents the name of this woman is spelled *ħatala*.⁸⁹ Another letter that is written by Lā-qēpum to his wife is ICK 1, 69, but here the name of the woman is spelled *ħutala*.⁹⁰ In another text, ICK 1, 67, we read

interpretation of [...]*x-ki-pu-uš*, however, and I will therefore leave the possible pair *ta-at-kà-pu-ú* / [*ta-a*]*t-ki-pu-uš* out of consideration.

88 Besides the triplet *šapunaħšu* / *išpunaħšu* / *šupunaħšu*, which represents an underlying /spunahsu/, we once find a name spelled *šipunaħšuš*, which clearly belongs here, too. At first sight, it seems to represent a pronunciation [sɪpunahsu], which would contradict the rule that an initial sequence /sC^{lab}u-/ receives the anaptyctic vowel *u* instead of *i*. In § 5.3.62 it will be argued, however, that *šipunaħšuš* may be interpreted otherwise.

89 *ħa-ta-lá* (BIN 4, 228: 2; CCT 3, 50a: 2, 3; ICK 1, 3: 1, 20).

90 *ħu-ta-lá* (ICK 1, 69: 2).

about a Lā-Qēpum, son of *wardum*, whose wife is called *huatala*,⁹¹ a spelling that may also be found in ICK 4, I 669, which is a letter send to *huat[a-...]*⁹² by a person named *la[-...]*. It is generally assumed that all these attestations refer to the same couple,⁹³ which means that the three spellings of the female name, *hatala*, *hutala* and *huatala*, must represent a single form. For instance, Zehnder (2010: 161), who states that the three spellings “Varianten desselben Namens darstellen”, proposes that “die vollste Graphie *Huatala* der originalen Lautung am nächsten kommen [dürfte], während *Hutala* und *Hatala* vereinfachte Schreibungen des unter Umständen als /Hwa^o/ anzusetzendes Anlauts sind”. Although I do not oppose the concept of simplified spellings, I find it difficult to believe this scenario. Why would an initial sequence /hwat^o/, besides by the expected spelling *huat*^o, also be spelled so defectively as *hatala* (omitting the phoneme /w/) and *hutala* (omitting the phoneme /a/)?

In view of the findings above, I would instead assume that the alternation between *a* and *u* in *hatala* vs. *hutala* indicates that the *a* is a graphic vowel that is used in the spelling of an initial consonant cluster, and that the *u* represents an anaptyctic vowel that in pronunciation is sometimes used to solve this cluster. Since we have seen above that an anaptyctic *u* is only used in clusters containing a labial consonant, I assume that the first consonant of this word was a ‘labialized laryngeal’, /h^w/, a sound that is nowadays commonly assumed to have been present in the Indo-European languages of 2nd millennium BCE Anatolia.⁹⁴ This would mean that in the spelling *hatala* the labiality of the laryngeal was not separately spelled out (note that Assyrian did not possess such a phoneme, so it is quite possible that the Assyrians may not always have heard the labiality at all), whereas in the spelling *huatala* the labio-laryngeal is spelled with an explicit marker of the labiality, namely with the sequence *hu-*. In other words, I assume that the underlying phonological form of this name was /h^wtala/, which was in principle pronounced [h^wtala] (spelled both *huatala* and *hatala*), but which was sometimes pronounced [h^wətala] as well (spelled *hutala*).

The presence of such a labialized laryngeal may also be assumed for the following case. The quadruplet *šaharpia* (m.),⁹⁵ *šuħarpia* (g.u.),⁹⁶ *šuhurpia* (m.),⁹⁷

91 *hu-a-ta-lá* (ICK 1, 67: 2).

92 *hu-a-t[a-lá]* (ICK 4, I 669: 2).

93 Hecker 1968: 33; Zehnder 2010: 161.

94 Kloekhorst 2006: 97–101; Kloekhorst 2008: 836–9; Melchert 2011: 128–9; Melchert fthc.

95 *ša-ħa-ar-pí-a* (AKT 10, 23a: 16; AKT 10, 23b: 2, 12).

96 *šu-ħa-ar-pí-a* (kt m/k 24: 40; kt m/k 35: 39; kt n/k 31 [1b]: obv. 6).

97 *šu-ħu-ur-pí-a* (AKT 6c, 65o: 4; AKT 10, 45a: 10 (-u[r-pí]-a); AKT 10, 45b: 2), *šu-ħu-ur-pí-a* (AKT 3, 88: 59; AKT 10, 1a: 13; AKT 10, 1b: 2; AKT 10, 55a: 12 ([šu]-); AKT 10, 55b: 1 (-[ur]-);

and *šihurpia* (g.u.)⁹⁸ show several kinds of alternations: an alternation between *a*, *u* and *i* in the sequence *šah*^o vs. *šuh*^o vs. *ših*^o, and an alternation between *u* and *a* in the sequence *hur*^o vs. *har*^o. This latter alternation can to my mind only be explained by assuming that the *a* is a graphic vowel that is used to write an underlying cluster, whereas the *u* represents an anaptyctic vowel that is sometimes used in the pronunciation of this cluster. Since *u* is only used next to labial consonants, we must assume that the *h* was in fact labialized: /-h^wr-/. The alternation between *a*, *u* and *i* in *šah*^o vs. *šuh*^o vs. *ših*^o can be understood, too, if we assume that *a* is a graphic vowel, whereas *u* and *i* are both anaptyctic. I therefore assume that the phonological shape of the underlying name was /sh^wrpia/, which was pronounced [sh^wrpia] (spelled *šaharpia*), [səh^wrpia] (spelled *šuharpia*) as well as [səh^wərpia] (in principle spelled *šuhurpia*, but also once *šihurpia*).⁹⁹

A similar case is formed by the triplet¹⁰⁰ *lahrahšu* (g.u.), *luhrahšu* (m.), and *lahurahšu* (g.u.).¹⁰¹ The alternation between *a* and *u* in the initial sequence *lah*^o vs. *luh*^o indicates that the *a* must be a dead vowel, and that the *u* must represent an anaptyctic vowel that sometimes is used in the pronunciation of an initial consonant cluster. The alternation between *u* and zero in the sequence *hur*^o vs. *hr*^o indicates that this is an underlying consonant cluster as well, and that the *u* is a mere anaptyctic vowel. The use of the anaptyctic vowel *u* both in front of and after the *h* indicates that this must have been a labial sound, and I therefore phonologically analyse this name as /lh^wrahsu/, which could be pronounced [lh^wrahsu] (spelled *lahrahšu*, without separately indicating the labiality of the labio-laryngeal) as well as [ləh^wrahsu] (spelled *luhrahšu*) and [lh^wərahsu] (spelled *lahurahšu*).

BIN 4, 170: 3; CCT 1, 34a: 24; TC 1, 122 [1b]: rev. 12 (-[pī-a]); TC 3, 214e [1b]: 4; kt f/k 59a [1b]: 1 (*šu-hu-ur-pī-a*); kt f/k 59b [1b]: 21 (-u[r]-); kt r/k 15 [1b]: 30 (-[a]); kt 89/k 376 [1b]: 2). The name *zu-hu-ur-pī-a* as attested on AKT 3, 87: 34 (cited there as “*Sū-hu-ur-pī-a*”; reading confirmed by collation, courtesy Prof. Hakan Erol (June 1, 2018) – p.c. G. Barjamovic) is formally almost identical to *šuhurpia*, but I do not know how to interpret the presence of the initial *z*- = [ts-]. Cf. footnote 354 for the name *zuhurpiala*, which seems to be related to *zuhurpia*.

98 *šī-hu-ur-pī-a* (kt n/k 72: 3).

99 According to the rules discussed in § 3.2.6 and 3.2.7, the form *šihurpia* is irregular: next to the labialized /h^w/ we would expect an anaptyctic vowel *u*, not *i*. It therefore can be no coincidence that *šihurpia* is attested only once, whereas *šuhurpia* occurs manyfold.

100 Cf. e.g. Jan Gerrit Dercksen, who in his unpublished collection (cf. the beginning of Chapter 1) cites *luhrahšu*, *lahrahšu* and *lahurahšu* under a single lemma.

101 Cf. footnotes 740, 741 and 742 for attestations of these three names.

Perhaps also the names *tarḫala* (m.), *tarḫula* (g.u.) and *tarḫuala* (m.)¹⁰² can in this way be interpreted as variants of each other. If so, we have to assume that the underlying name was /tarh^wla/, which could be pronounced [tarh^wla] (spelled *tarḫala*, without rendering the labiality, and *tarḫuala*, with a separate rendering of the labiality) as well as [tarh^wəla] (spelled *tarḫula*). If also the singular spelling *turḫala* (m.)¹⁰³ belongs to this group, we may assume an underlying form /trh^wla/, with *turḫala* representing a pronunciation [tər^hwla].¹⁰⁴

Earlier on, in § 3.2.6, we have come across the pair *arkalia* (m.) / *arkulia* (m.), which in view of the above considerations may be regarded as containing an underlying labiovelar: /ark^wlia/. This means that the spelling *arkalia* represents a pronunciation [ark^wlia], in which the labiality of the labiovelar remains unexpressed, whereas the spelling *arkulia* represents the pronunciation [ark^wəlia], in which the schwa was perceived as a rounded vowel because of the adjacent labial sound, and therefore was spelled as *u*.

If the spellings *kalakala* (g.u.)¹⁰⁵ and *kulakula* (m.)¹⁰⁶ form a pair as well, we may explain them with a similar scenario. The underlying phonological form would then be /k^wlak^wla/, which could be pronounced [k^wlak^wla] (spelled *kalakala*) as well as [k^wəlak^wəla] (spelled *kulakula*).

3.2.8 Other Kinds of Alternations: the Cluster -mn-

We have in § 3.2.3 already met the triplet *ḫaršumalka* (g.u.) / *ḫaršumilka* (f.) / *ḫaršumnalka* (f.).¹⁰⁷ Where the former two spellings show -*m*-, the latter spelling has -*mn*-. The spelling with -*mn*- is supported by the name *ḫaršumnuman* (m.),¹⁰⁸ which can now be regarded as containing the same initial element, *ḫaršumn*-. It is interesting to see, however, that besides *ḫaršumnuman* we also come across a few spellings *ḫaršunuman*. Moreover, according to Dercksen (2014: 198⁶), in some cases the names *ḫaršumnuman* and *ḫaršunuman* refer to a single person, so that we are certainly dealing with a single underlying name.

In order to account for these facts, I assume that in all cases we are dealing with an underlying cluster /mn/: /harsomnlka/ and /harsomnoman/.¹⁰⁹

102 Cf. footnotes 915, 917 and 918 for attestations of these three names.

103 Cf. footnote 919 for attestations.

104 See § 5.3.147 below for a more detailed analysis of these forms and an overview of their attestations.

105 *kà-lá-kà-lá* (ТРАК 1, 198: 9).

106 *ku-lá-ku-lá* (KKS 21b: 13, 23; KKS 21a: 6, 21; kt e/k 167 [1b]: 6).

107 See footnote 597 for an overview of attestations of these names.

108 See footnote 598 for an overview of attestations of this name and of *ḫaršunuman*.

109 Cf. § 5.3.35 for the /o/-s in these names.

Apparently, in pronunciation (or in this case perhaps better: in perception) this cluster could undergo an assimilation to either [-m:-] or [-n:-].

A similar treatment of the cluster *-mn-* is found in the pairs *šamnaḥšušar* (g.u.) / *šamaḥšušar* (g.u.), *ša/imnuman* (m.) / *ša/inuman* (g.u.), and *šimnilka* (f.) / *šinilka* (f.).¹¹⁰ In all these names, the original element seems to be *ša/imn-/smn-*, which is assimilated to either *šam-* [sm:-] or to *ša/in-* [s(ə)n:-].

The choice for whether the simplification of *-mn-* yields *-m-* or *-n-* seems to be partly based on the phonetic environment. When an *-m-* is following later on in the word, *-mn-* is assimilated to *-n-* (*ḥaršumnuman* > *ḥaršunuman*, *ša/imnuman* > *ša/inuman*). In the other cases, the *-mn-* usually yields *-m-* (*ḥaršumnalka* > *ḥaršuma/ilka*, *šamnaḥšušar* > *šamaḥšušar*), although we sometimes find *-n-* as well (*šimnilka* > *šinilka*).

3.2.9 The Spelling -Cua- vs. -Cuwa- vs. -Cwa-

One of the best attested persons with a Kanišite name is a man whose archive has been excavated on a single spot, and whose name is spelled *pí-ru-a*, *pì-ru-a*, *pí-ru-wa*, *pì-ru-wa*, *pì-ru-wa-a*, *pí-ir-wa*, *pì-ir-wa*, as well as *pì-ir-ú-a*.¹¹¹ Since it is in this case clear that we are dealing with a single individual, all these spellings must refer to a single underlying name. We can therefore assume that the spellings °Cu-a, °Cu-wa(-a), °C-wa, and °C-ú-a all represent a single phonological sequence, which I will write as /°Cua/.

3.2.10 The Difference between TA and DA

As we have seen above (§ 3.2.1), in Old Assyrian orthography, the signs TA and DA are relatively consistently kept apart, with TA in principle denoting the syllables /ta/ or /ṭa/, whereas DA in principle renders /da/. Also in the spelling of the Kanišite personal names the two signs in principle seem to be kept apart. For instance, the name *ḥa/ištaḥšu* occurs 24 times and is always spelled with the sign TA,¹¹² whereas e.g. *ḥumadašu* occurs 44 times and is always spelled with DA.¹¹³ It must be admitted that some names do show an interchange between TA and DA, but these do not seem to be structural. For instance, the name *dakniš* occurs eleven times spelled *da-ak-ni-iš*, with the sign DA,¹¹⁴ which

110 See § 5.3.118 for a more detailed treatment and an overview of attestations.

111 Cf. footnote 792 for an overview of attestations.

112 Cf. footnote 602 for an overview of attestations.

113 Cf. footnote 627 for an overview of attestations.

114 *da-ak-ni-iš* (AKT 2, 16: 14; AKT 3, 6: 4; AKT 6a, 202: 6; AKT 10, 53: 23 (-n[i-iš]); KTS 1, 33a: 4; TC 1, 90a: 3; TC 1, 90b: 3; TC 3, 227a: 17; TC 3, 227b: 1; kt v/k 182: 4), *da-ak-ni-iš* (kt n/k 101: 16). OAPD cites two more texts where “Dakniš” is attested (kt n/k 2088; kt 86/k 177), but since OAPD does not give precise spellings and does not consistently distinguish between

is quite more often than the spelling *ta-ak-ni-iš*, with the sign TA (3 times).¹¹⁵ The name *tarikuda* is 28 times spelled with an initial TA and a final DA, *ta-ri-ku-da* (4 times also *tí-ri-ku-da*), which is much more often than the spellings *da-ri-ku-da* (once) and *ta-ri-ku-ta* (9 times).¹¹⁶

It therefore seems a safe working hypothesis to assume that the sign TA and DA in principle designate different sounds. On the basis of their usage in the spelling of Old Assyrian, it is likely that TA denotes /ta/ and DA denotes /da/.

3.2.11 *The Spelling of -NC-clusters*

Although we find several names in which a nasal is found before another resonant (*šimnuman*, *ḥaršumnaḥšu*, *tamria*),¹¹⁷ we only rarely find instances where nasals can be found before obstruents.¹¹⁸ Two of these rare instances are the names *šimzur* (g.u.)¹¹⁹ and *šinzur* (m.),¹²⁰ which probably represent /simtsur/ and /sintsur/ (the latter having arisen from the former through assimilation of *m* to *n* because of the following dental consonant?). Interestingly, however, these two forms are very reminiscent of the name *šizur* (m.),¹²¹ which is attested multiple times. Could these names be regarded as cognate, or even as representing a single name? If so, we would have to assume that the nasal consonant was in the majority of cases not expressed in writing.

This seems to be corroborated by the following case. On the tablet ICK 1, 16b, a witness called *ku-ul-ša-an* is mentioned (line 8). On its corresponding envelope, ICK 1, 16a, the seal of this witness is accompanied by the phrase KIŠIB *ku-ul-ša-ta-áš* (line 2), however. Already Bilgiç (1945–1951: 4) assumed that this alternation indicates the spelling *kulšan* can be interpreted “als Wiedergabe

t-signs and *d*-signs, it cannot be ascertained that these attestations would be spelled with the sign DA as well.

115 *ta-ak-ni-iš* (ATHE 5b: 2; ATHE 5a: 18; kt v/k 182: 8).

116 Cf. footnote 1000 for an overview of attestations of all these forms.

117 But cf. § 3.2.8 for the fact that the cluster *-mn-* occasionally is assimilated to [-m:-] or [-n:-].

118 E.g. *ta-an-tù-li* (AKT 10, 23a: 3, 18; AKT 10, 23b: 1, 5). Since this name is attested on one pair of tablet and envelope only, it is unclear whether this name would always be spelled with an *-nt*-cluster.

119 *ší-im-zu-ur* (kt c/k 361: 6).

120 *ší-in-zu-ur* (AKT 10, 20a: 18). The appurtenance of the name *zi-en-zu*[-...] (kt 94/k 166: 8), cited by OAPD as “Sensur” (i.e. *sé-en-sú*[-ur]), is unclear to me.

121 *ší-zu-ur* (AKT 10, 2a: 23; AKT 10, 2b: 21; AKT 1, 14: 1, 17, 27 (-zu-ir¹); AKT 6a, 197: 22; AKT 10, 20b: 4; AKT 10, 21b: 5; AKT 10, 38b: 2; AKT 10, 52: 14; AKT 10, 53: 22; AKT 10, 59a: 19; BIN 6, 226: 4; C10 Landsberger: 18; KTH 5: 16; OrNS 52, 1a: 2; OrNS 52, 1b: 20; kt c/k 681: 5; kt c/k 797: 17; kt c/k 1635: 4, 7; kt v/k 152: 11; kt 01/k 319a [1b] (Günbatt 2014, nr. 9): 4), *ší-zur* (AKT 10, 62a: 5, 15; AKT 10, 62b: 7, 10, 16). Three more attestations of “Šēzur” are cited by OAPD for the unpublished texts kt t/k 9, kt 91/k 282, and kt 93/k 733.

eines **-ant*”, which implies that *kulšataš* represents an underlying form in */-antas/* (the *-aš* of which is usually regarded as representing the ending of the genitive case, cf. § 4.2.3). Apparently, its */-n-/* remained unexpressed in writing.

The absence in writing of the preconsonantal nasal in *šizur* = */sintsur/* (or */simtsur/*) and *kulšataš* = */kulsantas/* may well be linked to the assimilation of *n* to a following consonant, with gemination as a result, as can be observed in Old Assyrian. For instance, OAss. *i-ta-ak-ru-ú* ‘they have denied’ represents */ittakrū/* < **intakrū* (derived from the verb *nakārum*); *ta-šú-ur* ‘you guarded’ must represent */taššur/* < **tanšur* (derived from *našārum*).¹²² Since this assimilation also affects word-final *n* followed by enclitics (e.g. *a-da-ma* ‘I will give and’ /*addamma/* < **addan=ma*) and the *n* of apocopated proclitic *ana* ‘to’ and *ina* ‘in’ (e.g. *i-kà-ni-iš* ‘in Kaniš’ /*ikkanis/* < **in-kaniš* < *ina kaniš*), we may assume that it was still a synchronic rule in Old Assyrian. It therefore seems possible that Assyrians were simply unable to perceive clusters of the shape *-nC-* in the Kanišite personal names, and that they automatically analysed them as geminates.

3.2.12 Plene Spelling

Plene spelling is the phenomenon that after a *CV*-sign or before a *VC*-sign an extra *V*-sign is written, with the same vowel as in the *CV*- or *VC*-sign, e.g. *(-)pa-a(-)* or *(-)a-ap(-)*. This spelling practice is rare in the Kanišite personal names, although examples do occur.

In some cases, plene spelling is used next to non-plene spelling. For instance, in ICK 1, 35, a man occurs whose name is spelled *ša-lu-a-ta* on the tablet (line 1) but *ša-lu-a-ta-a*, with plene spelling of the final *a*, on the envelope (line 9). A similar situation can be found with the individual whose name is spelled both *a-ta-ta* and *a-ta-ta-a* on kt 89/k 383a [1b]. Other such pairs are *pu-ta* next to *pu-ta-a* (ICK 1, 19), *a-li* next to *a-li-i* (kt c/k 1634 / 1635), *a-zu* next to *a-zu-ú* (KKS 21), and *lu-lu* next to *lu-lu-ú* (AKT 10, 25). Since plene spelling in these names is not used consistently, it is difficult to interpret its function.

In other cases, the function of plene spelling may be to disambiguate ambiguous signs. For instance, the spelling *pì-ru-wa-a*, which stands besides *pì-ru-wa* and *pì-ru-a*, may be used to indicate that the sign PE/I, which can be read *wa* as well as *we*, *wi* and *wu*, should in this name be read *wa*. Similarly in the men’s name *ša-ra-pu-nu-wa-a* (which occurs besides *°pu-nu-wa*, *°pu-nu-a* and *°pu-un-wa*).¹²³

¹²² Examples taken from Kouwenberg 2017: 54.

¹²³ *ša-ra-pu-nu-wa-a* (AKT 10, 34a: 23; AKT 10, 34b: 4; kt 88/k 1050: 16), *ša-ra-pu-nu-a* (AKT 10, 9a: 8; AKT 10, 42a: 13; AKT 10, 42b: 3; CCT 1, 8b: 3; CCT 5, 49d: 14; KKS 31a: 18; KKS 31b: 5; TC

There are a few names that show consistent spelling with an extra *V*-sign, however. For instance, the name *ší-wa-áš-mì-i* always occurs spelled with an extra sign I (15 times); it is never spelled ***ší-wa-áš-mì*.¹²⁴ The same goes for *i-na-ar-mì-i*, which occurs spelled thus 8 times, but never ***i-na-ar-mì*.¹²⁵ Since it is quite likely that in both names we are dealing with a single onomastic element, *°mì-i* (cf. the fact that besides *ší-wa-áš-mì-i* we also find the name *šīwaškūnian*, and besides *i-na-ar-mì-i* we find the names *inar* and *inarahšu*), this observation becomes even more telling. Other names that may contain this element are *a-zu-mì-i* and *ip-mì-i*, and we even find the independent name *mì-i*.¹²⁶ One could argue that since the sign *mì* is in principle ambiguous regarding its reading (it can be read *me* as well), the sign I is used to disambiguate it. However, we have seen that in the case of *pì-ru-wa-a* besides *pì-ru-wa*, where it was argued that the plene spelling with the sign A may have been used for disambiguation of the ambiguous sign *wa/e/i/u*, the sign A is not used consistently at all. Moreover, if *e/i*-ambiguous signs would need disambiguation, we would expect to find plene spellings of the type *(-)Ci-i(-)* and *(-)Ce-e(-)* much more often in the corpus of the Kanišite personal names. It is therefore unlikely that the spelling with the sign I in *°mì-i* has disambiguation as its function. Zehnder (2010: 6) convincingly states that the element *°mì-i* must be connected with the element *-mei* that is attested in the personal name *ṁšandamei* as attested in Hittite.¹²⁷ Since this element is spelled *-me-i* (and not **-mì-i*, as would have been perfectly possible in Hittite), it is clear that it must have contained a diphthong, */°mei/*. If the connection between Kanišite *-mì-i* and Hittite *-me-i* is correct, which seems attractive, we can conclude that the presence of the sign I in *-mì-i* is in fact not a matter of plene spelling, but that it is consistently used because it designates a vowel that is different from the vowel that is expressed by the sign *mì*. In other words, these names should be read *ší-wa-áš-me-i*, *i-na-ar-me-i*, *a-zu-me-i*, *ip-me-i*, and *me-i*, respectively.

1, 87: 5; kt n/k 77: 4; kt 91/k 183b: 9; kt 93/k 941a: 7, kt 93/k 941b: 2), *ša-ra-pu-nu-wa* (AKT 1, 15: 8; AKT 10, 6b: 8; AKT 10, 9b: 12; AKT 10, 32a: 19; AKT 10, 32b: 3; AKT 10, 35a: 24; AKT 10, 35b: 5; AKT 10, 46a: 2, 16; AKT 10, 46b: 1, 4; AKT 10, 64a: 8; TC 1, 99: 12; kt c/k 361: 4; kt c/k 1637: 3), *ša-ra-pu-un-wa* (kt 94/k 382: 3), *šar-pu-nu-a* (kt 91/k 286: 4), *ša-ar-pu-nu-wa* (AKT 10, 6a: 6).

124 See footnote 856 for an overview of attestations.

125 See footnote 668 for an overview of attestations.

126 See footnotes 555, 678 and 450, respectively, for attestations of these names. Cf. § 5.3.43 for a treatment of the alleged name **hī-wa-áš-mì-i*.

127 *ṁša-an-da-me-i* (StBoTB 4.1, 26), [*ṁša-an-da-me*]-*i* (StBoTB 4.2 rev. 3), *ša-an-d[a-me-i]* (StBoTB 4.4 obv. 16), *ṁ[š]a-an-da-me-i* (StBoTB 4.5, 13), *ṁša-an-da-me-iš=ua* (KBo 25.196, 7). Cf. also the name *išpudašmei* (§ 5.2.11 and 5.3.61).

A similar case may be formed by the following name. On KKS 21, we come across a man whose name is spelled *a-šl-it* on the envelope,¹²⁸ but *a-šl-e-it*, with an extra sign E, on the corresponding tablet.¹²⁹ If the presence of this E is interpreted as plene spelling, we should read the latter name as *a-šé-e-et*, implying a reading *a-šé-et* of the former form, pointing to an underlying name /aset/.¹³⁰ Yet, in KTH 28, we come across a man whose name is spelled *a-šl-it* as well, but this time having the alternative spelling *a-šl-i-it*, with an extra sign I.¹³¹ This latter spelling precludes an analysis /aset/. Instead, the combination of the three spellings *a-šl-it*, *a-šl-e-it* and *a-šl-i-it* rather points to the presence of a diphthong, either /aseit/ (in which case the names should be transliterated *a-šé-it*, *a-šé-e-it* and *a-šé-i-it*, respectively) or /asiet/ (in which case we should transliterate *a-šl-et*, *a-šl-e-et*, and *a-šl-i-et*, respectively). A similar situation is found for the men's name *na-ki-li-it*, of which a by-form *na-ki-li-e-it* is attested as well.¹³² We therefore may assume that this name was either /nkileit/ or /nkiliet/. Interestingly, both names have a look-alike that ends in *-iat*: *ašiat* and *nakiliat*. As I will argue in more detail in section 7.1, in both cases we are probably dealing with a pair, namely /asiet/ vs. /asiat/ and /nkiliet/ vs. /nkiliat/, in which the alternation between /-ie-/ and /-ia-/ may be explained as morphological.

Having examined in this way some of the problematic aspects regarding the phonological interpretation of the Old Assyrian orthography employed in the writing of the Kanišite personal names, it is now time to look more closely into their possible linguistic background.

¹²⁸ *a-šl-it* (KKS 21b: 11, 15, 20 (-š[*l-it*])).

¹²⁹ *a-šl-e-it* (KKS 21a: 3, 9, 13, 19).

¹³⁰ Thus e.g. Donbaz 1988 ("Ašēd") and Michel 2011c: 101 ("Ašēt").

¹³¹ *a-šl-it* (KTH 28a: 13), *a-šl-i-it* (KTH 28a: 4, 7; KTH 28b: 6 (-[*i*]t), 10).

¹³² Cf. footnote 1009 for an overview of attestations.

Identifying the Linguistic Background of the Kanišite Personal Names

Above, in section 2.2, we saw that it is in principle difficult to prove the linguistic background of personal names if one cannot determine their lexical semantics on independent grounds. Nevertheless, we will in the following chapter treat all arguments that speak in favour of a specific linguistic interpretation of (some of) the Kanišite names. First, we will look at more general clues that are provided by Old Assyrian texts on the language or languages that was / were spoken in Kaniš.

4.1 The Term *nuwā'um*

It has sometimes been argued that the term *nuwā'um*, which is used by the Assyrians for referring to the local Anatolians, gives a hint as to the (ethno-) linguistic background of these people. For instance, Edzard 1989 contemplates the possibility that *nuwā'um* may have been derived from the Hittite sentence initial particle *nu*. It would thus mean 'the people that say *nu*' and indicate that the local population of Kaniš was Hittite. However, in Old Hittite the connector *nu* is not as omnipresent as it is in later Hittite,¹³³ and it therefore seems unlikely that such an interpretation of *nuwā'um* is correct.¹³⁴ Another interpretation was offered by Carruba (1992), who derives *nuwā'um* from **luwā'um*, a nisbe of the stem **luwa-*, from which also the toponym Luwiya would be derived. It would then point to the presence of Luwians in Kaniš. However, a change of **l- > n-* is awkward (Carruba's examples of *l/n*-alternations to support his idea are all either sporadic or obsolete). Moreover, as we will see in section 4.4, there are no good arguments for assuming that the people of Kaniš spoke

¹³³ That is, in the variant of Hittite as spoken in Ḫattuša. Cf. Chapter 9 for the recognition that Kanišite Hittite and Ḫattuša Hittite were closely related but nevertheless separate dialects. It therefore cannot be fully excluded that in Kanišite Hittite the sentence initial particle *nu* was used on a wider scale earlier in time already. However, this cannot at this moment be independently proven.

¹³⁴ Thus also Goedegebuure *apud* Yakubovich 2010: 222²⁰.

Luwian. All in all, the term *nuwā'um* does not seem to give any information on the (ethno)linguistic background of the local population of Kaniš.¹³⁵

4.2 Influence of the Local Language(s) of Kaniš on Old Assyrian

Although the far majority of Old Assyrian texts stem from archives that belonged to Assyrian merchants, the excavations at Kaniš have also yielded some archives that belonged to non-Assyrian, local individuals. We have, for instance, an archive of *pirua*, son of *šupiepra*, an archive of *šarnikan*, an archive of *šarapunua*, an archive of *šupiaḥšu*, an archive of *ašiet*, son of *arurupa*, etc. (cf. Michel 2011c: 95–102). Since it is clear that many Assyrian merchants were able to read and write (cf. Kryszat 2008a: 231–3; Larsen 2015: 55–6; Barjamovic 2015b: 60–4), it is an interesting question to what extent also Anatolians were able to write texts in Old Assyrian. According to Kryszat, it is not easy to answer this question:

[H]ow does one recognize that an Old Assyrian tablet was written by an Anatolian scribe? One might suppose that a very clumsily written text might point to an Anatolian. But we know for certain that there were many Assyrians who did not write very nicely too. Some tablets written by Anatolians feature a script, which is considerably larger than that of most Assyrians, but this is no proof either. And the fact that we have archives of Anatolian traders also does not tell us by itself that the tablets in these archives were written by natives. Many of the texts from Anatolian archives are debt notes of some kind. But among the witnesses we often have one person with an Assyrian name and this is in all likelihood the scribe.

KRYSZAT 2008a: 233–4; cf. also MICHEL 2011c: 105–7

However, according to Kryszat (2008a: 234f.) and Michel (2011c: 107–8), there is one clear criterion for assuming that an Old Assyrian text was written by an Anatolian individual, and that is when the text contains consistent grammatical mistakes.

¹³⁵ CAD (N: 356–7) connects *nuwā'um* with a root *nū'u* 'rude, uneducated, brute, stupid', which implies that the word originally meant 'barbarians', or the like. Cf. Edzard 1989: 107–8 and Yakubovich 2010: 222²⁰ for criticism, however. Larsen (2015: 137) thinks that *nuwā'um* is "possibly an onomapoeticon referring to incomprehensible speech like Greek *barbaroi*." Dercksen (2001/02: 198) points out that the term *nuwā'um* is attested in a text from Mari as well, and there refers to slaves who may have come from Anatolia.

4.2.1 *Grammatical Mistakes*

The idea that grammatical mistakes in a text may indicate that its author was non-Assyrian, goes back to Kienast (1984), who, during an investigation of twenty Old Assyrian documents containing contracts dealing with Anatolian individuals, noticed that there was only one text among these that shows no grammatical mistakes. All others contain linguistic peculiarities, which to his mind means “dass wir aus ihnen zwingend auf die nichtassyrische Herkunft der Schreiber schliessen müssen” (1984: 31). In the description of one of these peculiarities, Kienast remarks that it “auf den Einfluss der Muttersprache der Schreiber zurück zu führen sein [mag]” (*ibid.*: 35). Also Michel (2011c: 108) states that, although some of the cases described by Kienast “must be attributed simply to poor command of Akkadian”, others “can be regarded as conditioned by differences between the scribes’ mother tongue and the language in which they were writing”. These linguistic mistakes may thus reveal interesting information on the type of language spoken by the bearers of the Kanišite personal names.

Kienast’s list of peculiarities contains the following items (Kienast 1984: 32–5):

1. Aberrant use of CV- and VC-signs

E.g. “šu-ma ... té-pá-šā” (ICK 1, 27a: 10; ICK 1, 27b: 13) instead of expected *šu-ma ... té-pá-áš ‘when she does’; “i-šā-qá-lā” (ICK 1, 123: 10) instead of expected *i-šā-qá-ál ‘he will pay’; “ta-ta-ur” (ICK 1, 27b: 7) instead of expected ta-ta-ru ‘she will bring away’. This may be a feature that can be attributed to a poor command of the cuneiform script, and does not necessarily have to depend on the influence of the scribe’s mother language.¹³⁶

2. Broken spellings

Kienast only gives *iḥ-pí-ar* (BIN 6, 226a: 9; BIN 6, 226b: 14) as an example, but this form is unclear anyway, cf. Hecker 1968: 31. This feature should therefore be removed from this list.

¹³⁶ If we would follow Waal’s attractive hypothesis (Waal 2012) that already in Old Assyrian times the Anatolians possessed their own writing system, namely the Anatolian hieroglyphs, with which they wrote on wooden tablets (*iṣurtum*’s, cf. *ibid.* 291–8), it is possible, however, to think of a different kind of influence. Since the Anatolian hieroglyphic script only contains signs of the value *V* and *CV*, and not of the value *VC*, it would be perfectly understandable why an Anatolian person would write a word like *teppaš* ‘she does’ as *té-pá-ša*, or a word like *išaqqal* ‘he will pay’ as *i-ša-qá-lā*, because this would be the way in which words of such shapes would be written in the hieroglyphic script.

3. Plene spelling of vowels (both etymologically short and long ones)

E.g. *um-mu-šu-ú* (ICK 1, 35a: 6; ICK 1, 35b: 4) for normal *um-mu-šu* /ummu=su/ ‘his mother’; *ti-ḫi-i* (KKS 21a: 2) for normal *ti-ḫi* /tiḫī/ ‘besides’; etc. This feature may be attributed to a limited command of the orthographic conventions of Old Assyrian writing, and does not have to be caused by the linguistic background of the author.

4. The spelling of consonants that otherwise are assimilated

E.g. *i-dí-in-ši* (ICK 2, 76: 11) for normal *iddišši* ‘he has given her’; *i-ša-ba-at-sí* (ICK 1, 27a: 14; ICK 1, 27a: 9) for normal *iṣabassi* ‘he will seize her’. However, as Gojko Barjamovic informs me (p.c.), such spellings can be interpreted as morphographic writings, which are common also among native speakers of Assyrian, cf. the following examples from texts written by Assyrians: *i-dí-in-šu* (kt n/k 10: 17), *i-dí-in-šu-ma* (kt v/k 158: 9), *ni-dí-in-šu-ma* (AKT 6c, 636: 5).

5. Fricativization of stops

Kienast only gives the following example: “[*lá t*]ù-ḫa-lá-aḫ-ši” (ICK 2, 116: 11) instead of expected *lā tuḫallaqši* ‘sie darf sie nicht abhanden kommen lassen’. However, as this text is almost certainly authored by Ištar-bašti, an ethnically Assyrian woman, who purchased the slave in question, this example is irrelevant for the present discussion (p.c. Gojko Barjamovic).

6. Loss of mimation

E.g. “GAL *ma-ḫi-r*” (CCT 5, 26a: 2) for expected GAL *maḫirim* ‘head of the market’. This feature is found much more wide-spread in the Old Assyrian corpus (cf. Kouwenberg 2017: 66–7), and therefore was not influenced by the language of the Anatolian author.

7. Mixing up of singular and plural/dual

E.g. “*bé-tim*” ‘of the house’ (KKS 21a: 13) instead of expected *bētī* ‘of the houses’; “*i-dí-šu-nu*” ‘he had given them’ (CCT 5, 20a: 7) for expected *iddiššu* ‘he had given him’. This feature may simply be due to a poor command of Old Assyrian.¹³⁷

¹³⁷ Note however that the first example, gen.sg. *bētīm* instead of gen.pl. *bētī*, may be understandable for a scribe that spoke a language that had no difference between singular and plural in its genitive case, as I have argued to have been the case in Hittite, cf. Kloekhorst 2017a.

8. Mixing up of masculine and feminine gender

E.g. “[DUMU.]SAL-*sú*” ‘his daughter’ (KTP 43: 3) for expected DUMU.SAL-*sa* ‘her daughter’; the use of the prefix *i-* (3sg.m.) instead of expected *ta-* (3sg.f.) (ICK 1, 27; ICK 1,123). It is generally agreed upon that such mistakes in gender agreement¹³⁸ indicate that the mother tongue of the authors of these texts may not have had a distinction between masculine and feminine gender. It is often pointed out that this is a typical feature of the Indo-European Anatolian languages, like Hittite and Luwian (e.g. Dercksen 2007: 27⁶; Michel 2011c: 108⁴⁰). However, of the other known languages spoken in 2nd millennium BCE Anatolia, also Hurrian knows no grammatical gender.¹³⁹ It is interesting, however, that Hattic does make a distinction between masculine and feminine gender,¹⁴⁰ which means that it may be less likely that the authors of these texts spoke Hattic as their main language.

9. Mixing up genitival and accusative personal suffixes

E.g. “*a-šar li-bi-šl*” (ICK 1, 27b: 14) instead of expected *a-šar li-bi-ša* ‘to her wish’. This feature is likely caused by a limited command of Old Assyrian, and need not be influenced by the mother language of the author.

10. The use of tense in conditional clauses, which, according to Kienast, is “merkwürdig uneinheitlich”. This feature is likely caused by a limited command of Old Assyrian, and need not be influenced by the mother language of the author.

As we see, within the grammatical mistakes as signalled by Kienast, not many can be used for determining the linguistic background of the Anatolians who wrote some of the Old Assyrian texts. Only the mistakes in grammatical gender (which would point to a Hittite, Luwian or Hurrian – but not Hattic – background of the local authors) may be seen as a clear substratum influence.

However, apart from the peculiarities mentioned by Kienast, there are also some other linguistic features found in some Old Assyrian texts that can be ascribed to influence of the language (or languages) of the local population.

138 Cf. e.g. Albayrak 2005 [2006]: 101 and Kryszat 2008a: 234 for other examples.

139 Cf. Wegner 2007.

140 Soysal 2004: 182–4.

4.2.2 *Loanwords*

In the Old Assyrian texts there are a number of words that do not seem to be genuinely Assyrian because they have no Akkadian background and are unattested in other Akkadian dialects. These are therefore generally seen as loanwords into Old Assyrian, taken over from the local Anatolian language(s).¹⁴¹ According to Dercksen 2007, who offers the most recent treatment of a large part of these loanwords, their majority can be interpreted as deriving from Hittite, e.g. *ḫinišanum* ~ Hitt. *ḫani/ešša-* (a vessel), *ḫišanum* ~ Hitt. *ḫišša-* ‘pole’, *ḫulukanum* ~ Hitt. *ḫaluga-* ‘message, news’, *išpuruzinum* ~ Hitt. *išparuzzi-* ‘roof batten’, etc.

There is one word mentioned by Dercksen that would have a specifically Luwian origin, namely *targumanum* / *targumianum* ‘interpreter’, which according to Starke (1993) derives from a CLuwian word **tarkummann(i)-* ‘Bericht habend; Berichterstatter o.ä.’. However, this word is unattested in CLuwian; we only find a verbal form *tarkummī[ta]* ‘he reported’ there. The same verb is attested in Hittite as well: *tarkummae-^{zi}*, *tarkummiāe-^{zi}* ‘to declare, to proclaim, to interpret’. Although the Hittite verb is probably a loan, I do not see good reasons to assume that it should have been borrowed from Luwian. To my mind, it is equally possible that both Hitt. *tarkumm(i)ae-* and CLuw. *tarkummī-* were borrowed from a third source, which also yielded the Old Assyrian noun *targum(i)anum* ‘interpreter’.

Dercksen also mentions a group of loanwords from Hurrian (e.g. *alaḫinum* (an official), *purulum* (an official), *unušum* ‘corvée’). Interestingly, however, with only two exceptions, “these words of Hurrian origin were employed in other periods of Akkadian as well” (Dercksen 2007: 37–8). This implies that these Hurrian loanwords were not taken over in Anatolia, and they therefore need not say anything about the linguistic situation there.

In the case of Hattic, Dercksen is sceptical about the evidence that has been adduced in favour of Hattic loanwords in Old Assyrian, and he therefore doubts whether such Hattic loans occur at all (2007: 31).

We can thus conclude that when it comes to loanwords, it seems to be the case that Hittite was the main language from which they were taken over, which would make Hittite a good candidate for being (one of) the language(s) spoken in Kaniš.

4.2.3 *Non-Assyrian Case Endings*

Although Old Assyrian knows three cases (nominative, accusative and genitive), the Kanišite personal names are in principle never marked for case: they

¹⁴¹ Bilgiç 1954; Kronasser 1966: 136–40; Dercksen 2007.

always show a single form, no matter what function they are in. However, it does happen rarely that the Kanišite names seem to show inflection, but the endings that they then use are different from the Assyrian ones.¹⁴²

For instance, in kt 88/k 713 [1b]¹⁴³ we read about a man who is sold as a slave, and whose name is spelled *tù-ut-ḫi-li-a* (line 10, 16, 20, 25). This man has also sealed the tablet, and next to his seal we read KIŠIB *tù-ut-ḫi-li-áš* ‘seal of *t.*’ (line 9). We therefore may conclude that *tuthiliaš* forms an inflected form of the name *tuthilia*, and that this inflected form is the one used in possessive constructions.¹⁴⁴

A similar case can be found in ICK 1, 16. On the tablet containing this text a person named *ku-ul-ša-an* is mentioned as a witness, but on the corresponding envelope his/her seal is followed by the phrase KIŠIB *ku-ul-ša-ta-áš* ‘seal of *k.*’, with a seemingly inflected form. As we have seen in § 3.2.11, it is likely that the stem form represents an underlying /kulsant/, with the inflected form representing /kulsantas/. Again we see a form in *-áš* that is used in a possessive construction.

We find several others of such inflected forms in possessive constructions: e.g. *ša a-ma-[l]i-a-áš* ‘of *a.*’ (ATHE 6b: 3) besides the stem form *a-ma-li-a* on the corresponding envelope (ATHE 6a: 5);¹⁴⁵ KIŠIB *ki-ri-iš* ‘seal of *k.*’ (AKT 10, 22b: 7) besides the stem form *ki-ri* on the corresponding tablet (AKT 10, 22a: 7); *i-šé-er tù-nu-um-na-áš* ‘to the debit of *tunumna*’ (BIN 4, 208t: 2–3) vs. the stem form *tù-nu-um-na* on the corresponding envelope (BIN 4, 208e: 4).¹⁴⁶

In all the cases mentioned we find an ending *-áš* or *-š* that is used in a possessive construction. This clearly points to an Indo-European Anatolian language: in Hittite the genitive singular case shows the endings *-áš* and *-š* (Hoffner &

142 Cf. Laroche 1966: 312–3; Hecker 1968: 95; Kryszat 2008a: 235–6.

143 Donbaz 1993: 145–6; Kryszat 2008a: 235–6.

144 In fact, in this text we come across multiple examples of possessive constructions using a form in *-(a)š*: DUMU *[ša-al-ku-a]-ta-áš* ‘son of *š.*’ (line 1), KIŠIB *[ša-]al-ku-a-ta-áš* ‘seal of *š.*’ (line 1–2), KIŠIB *lá[-x-]ar-na-áš* ‘seal of *l.*’ (line 2), DUMU *a-ra-wa-áš* ‘son of *a.*’ (line 5), KIŠIB *ká-ru-nu-wa-áš* ‘seal of *k.*’ (line 8). Of these names, no forms in *-a* are attested in this text itself, but such forms do occur elsewhere: *šalkuata*, *arawa*, *karunua*. The form *tù-ut-ḫi-li-áš* of line 29 may in fact have a nominative ending, cf. below. The interpretation of the ending *-áš* of the name *ká-ru-nu-wa-áš* in line 12 is not clear to me.

145 According to Hecker 1968: 203, *amalia(š)* is not a personal name, but rather a toponym. Whether this is correct or not, the basic principle remains the same: *amaliaš* seems to function as a possessive case to *amalia*.

146 Cf. Laroche 1966: 312 and Hecker 1968: 95. Other examples may be DUMU *a-ru-ru-pá-áš* ‘son of *a.*’ (kt n/k 71: 3) besides the stem form *a-ru-ru-pá* (kt t/k 9: 15); IGI *šl-pu-na-aḫ-šu-uš* ‘eye (witness) of *š.*’ (AKT 3, 41: 17) vs. the many names ending in *-(a)ḫšu*; and the names of kt 88/k 713 as discussed in footnote 144.

Melchert 2008: 73.), and also in Hieroglyphic Luwian a genitive ending *-as* may be found (but this is much less secure, cf. Melchert 2012: 275). Crucially, Hattic and Hurrian do not know a comparable morpheme.

An example of another case ending may be found on kt h/t 330 [1b], where a man is mentioned whose name is spelled *lá-kà-an* when it forms the subject of a sentence (line 1), but whose name is spelled *lá-kà-ni* when it is preceded by the preposition *ana* ‘to’ (line 8). Although according to Old Assyrian grammar the preposition *ana* should be followed by a noun in the genitive case, here the case in *-(a)š* is not used: instead we seem to be dealing with an ending *-i*. Since *ana* ‘to’ is a preposition used to indicate indirect objects, it is attractive to compare this *-i* to the dative singular case ending *-i* that is known in Hittite and the Luwic languages. Again, Hattic and Hurrian do not know such a morpheme.

A third case ending may be found in the name *tù-ut-ḫi-li-áš* (kt 88/k 713 [1b]: 29), which shows an ending *-š* vis-à-vis the form *tù-ut-ḫi-li-a* as attested earlier on in the same tablet (lines 10, 16, 20, 25). In the sentence it occurs in, it is not used in a possessive construction, however, as the other names ending in *-š* treated above, but rather functions as the subject: (28) ... *a-na É [nu-nu]* (29) *tù-ut-ḫi-li-áš* (30) *i-za-bi-il₅* ‘(these things) Tuthilia will deliver to the house of [Nunu].’¹⁴⁷ This would fit the fact that in Hittite and Luwian an ending *-š* is used to mark the nominative case of common gender nouns (Hoffner & Melchert 2008: 69–70; Melchert 2003a: 186).¹⁴⁸

Not only personal names sometimes show a non-Assyrian case ending, this may also be attested in loanwords. According to Balkan (1979), the words *ma-ak-ri-e-iš* and *a-ší-iš* as attested on kt d/k 28 (= AKT 10, 40) are non-Assyrian, local words denoting parts of wagons and seeder ploughs. To his mind, these two words are “the first examples [of nouns] in one of the Anatolian languages, to show a trace of inflection (*-š*). Both words are used as accusatives in the text but their grammatical forms should have been probably nominative” (Balkan 1979: 56). Since the text talks about multiple *ma-ak-ri-e-iš* and *a-ší-iš*,¹⁴⁹ Dercksen (2007: 39) assumes that these words would stand in a plural case and he therefore argues that they contain the Hittite nom.pl. ending *-eš*. And

¹⁴⁷ Cf. Donbaz 1993: 146.

¹⁴⁸ Another possible Hittitoid nom.sg. form may be *ašuwanzi* (AKT 6a, 197: 1), which may be interpreted as a form in [-ants] = /-and-s/, containing an additional /-s/ when compared to the stem form *ašuwān* (as written in the remainder of AKT 6a, 197), which probably ended in /-and-/ (see § 5.2.3). Cf. also footnote 540.

¹⁴⁹ kt d/k 28b = AKT 10, 40a: (9) *ù 20 ma-ak-ri-e-iš* (10) *ù 20 a-ší-iš* (11) *i-du-nu* ‘and they will give 20 *m.*’s and 20 *a.*’s’. Cf. kt d/k 28a = AKT 10, 40b: (10) *20 ma-ak-r[i-e-i]š* 20 *a-ší-iš* ‘20 *m.*’s (and) 20 *a.*’s’.

indeed, the plene spelling with the sign E in *ma-ak-ri-e-iš* would fit an interpretation *ma-ak-ri-e-eš₁₅*,¹⁵⁰ on the basis of which *a-šl-iš* could be read *a-še-eš₁₅*, both showing an ending *-eš*. If this interpretation is correct, it would crucially show that the ending was Hittite, and not Luwic: the corresponding Luwian nom.pl.c. ending is *-inzi*.

4.2.4 *A Hittitoid Substrate Language*

Especially on the basis of these non-Assyrian case endings and the loanwords found in Old Assyrian texts, one may hypothesize that the (primary) local language spoken in Kaniš was Hittite or a language very closely related to it. It therefore stands to reason to first investigate to what extent arguments can be found for a Hittite interpretation of (a part of) the Kanišite personal names. It should be noted, however, that even if we would find arguments in favour of a close link between (some of) the Kanišite names and the Hittite language, there would always be a considerable time gap between the texts from Kaniš and the Hittite texts from Ḫattuša, which blocks the possibility of an exact match between these two linguistic strata.¹⁵¹ I therefore prefer to talk about a possible “Hittitoid” instead of a “Hittite” identification of these names.

4.3 Arguments for a Hittitoid Identification

A large group of Kanišite personal names contain elements that can be combined with other elements that are found within that group. For instance, there are many names ending in *-(a)ḥšu* (e.g. *apiziahšu*, *aruahšu*, *arzinahšu*, etc.), in *-(a)nika* (e.g. *ḥapuanika*, *iatanika*, *muanika*, etc.), in *-uman* (e.g. *akali-uman*, *atuman*, *ḥašiuman*, etc.), and several other elements. Interestingly, the initial parts of these names are sometimes found with several such elements. For instance, there is the triplet *šamnahšu*, *šamnanika* and *šamnuman*; and we also find *šupiahšu*, *šupianika* and *šupiuman*. It is therefore attractive to assume that these names are originally compounds, built up of two elements that can be combined with each other in different ways. A careful analysis of this large

¹⁵⁰ Dercksen himself reads *ma-ak-re-e-eš₁₅*, assuming that the plene spelling marks a long vowel, writing an ending *-ēš*. However, since plene spelling in Old Assyrian rather marks the presence of diphthongs (cf. § 3.2.12), and the Hitt. nom.pl.c. ending in principle was *-eš*, with a short vowel /e/ (only being lengthened when accented, cf. Kloekhorst 2014: 79–89), I rather assume that *ma-ak-ri-e-iš* is an *i*-stem form *ma-ak-ri-e-eš₁₅*, in which the plene *e* is used to spell the bivocalic sequence /ie-/.

¹⁵¹ Cf. Chapter 9 for arguments according to which the Kanišite Hittite names may be seen as deriving from a Hittite dialect that is slightly different from Ḫattuša Hittite.

complex of compound names yields good arguments in favour of a Hittitoid identification of them.

4.3.1 *Compound Names in -(a)ḫšu and -(a)ḫšušar*

Many of the Kanišite personal names end in the element *-aḫšu*: e.g. *apiziahḫšu*, *arunaḫšu*, *aruahḫšu*, *aruanaḫšu*, *arzanahḫšu*, *aśuahḫšu*, *ataḫšu*, etc. In all cases where we can determine the gender of the individuals carrying these names, they are male (for a full list of these names, cf. § 5.2.6). Another large group of names end in *-aḫšušar*: e.g. *arpuahḫšušar*, *eliahḫšušar*, *hapiiahḫšušar*, *hapuahḫšušar*, *ḫištahḫšušar*, etc. Interestingly, these names all refer to females (cf. § 5.2.7 for a list of these names).

Since formally the element *-(a)ḫšušar* seems to be an extension of *-(a)ḫšu*, we may assume that they are related to each other. This is supported by the fact that we find pairs of men's and women's names like *ḫapiaḫḫšu* (m.) vs. *ḫapiaḫḫšušar* (f.), *ḫištahḫšu* (m.) vs. *ḫištahḫšušar* (f.), *nimahḫšu* (m.) vs. *nimahḫšušar* (f.), *niwahḫšu* (m.) vs. *niwahḫšušar* (f.), *šadahḫšu* (m.) vs. *šadahḫšušar* (f.), and *šupiahḫšu* (m.) vs. *šupiahḫšušar* (f.).

It was Goetze (1933: 69²) who was the first to state that the element *-šar* therefore can be interpreted as a morpheme that represents the feminine gender. This prompted Bossert (1946: 154f.) to equate *-šar* with the Hittite feminizing suffix *-š(ša)ra-* that can be found in words like Hitt. *išḫaššara-* 'lady' (besides *išḫā-* 'lord') and **ḫaššuššara-* 'queen' (besides *ḫaššu-* 'king'). Moreover, Bossert argued that these suffixes have an Indo-European origin, since they can be connected with the element **-s(o)r-* that is reconstructed as a part of the PIE feminine cardinals **ti-s(o)r-es* 'three' and **k^wete-s(o)r-es* 'four' (besides the masculine forms **trei-es* and **k^wetuor-es*).¹⁵² This connection between Kanišite *-šar*, Hittite *-š(ša)ra-* and the PIE element **-s(o)r-* was taken over by Laroche (1966: 302–6), who adduced the Luwian feminizing suffix *-šr-* as attested in, for instance, CLuw. *nānašri(ia)-* 'of a sister' vs. *nāni(ia)-* 'of a brother'.

Having identified *-šar* as a likely Anatolian (in the Indo-European sense of the word) morpheme, Bossert investigated the possibility that the element *-aḫšu(-)* could be Anatolian as well (1946: 158f.). He refers to Bilgiç (unpublished 1943 dissertation) for the idea that the Kanišite women's name *ḫašušar* can be equated with Hittite **ḫaššuššara-* 'queen', and thus would contain the feminizing suffix *-šar* as well. Moreover, since this name resembles the

¹⁵² The reconstructions of **ti-s(o)r-es* and **k^wete-s(o)r-es* are based on Skt. *tisrās* 'three (f.)' and *cātasras* 'four (f.)' and OIr. *teoir* 'three (f.)' and *cetheoir* 'four (f.)'. Cf. already Lohmann 1936: 291–2 for the connection between Hitt. *-š(ša)ra-* and PIE **-s(o)r-*.

latter part of names like *ḥapiaḥšušar*, *ḥištaḥšušar* etc., he proposes that the *-a-* of *-aḥšu* and *-aḥšušar* should be analysed as belonging to the first elements of these names (e.g. *ḥapia-ḥšu(šar)*, *ḥišta-ḥšu(šar)*, etc.) and that *-ḥšu* and *-ḥšušar* are a “verkürzte Aussprache” of Hitt. *ḥaššu-* ‘king’ and **ḥaššuššara-* ‘queen’, respectively (1946: 158).¹⁵³

Bossert’s analysis of *-ḥšu(šar)* was rejected by Goetze (1954a: 355), however, who rather assumed that *-ḥšu*¹⁵⁴ is a derivative of the Hittite verb *ḥāš-i / ḥašš-* ‘to give birth to, to procreate’. In this way it would be semantically comparable to the Greek onomastic element *-γένης* ‘born’. Laroche (1966: 299–300, retracting his earlier approval of Bossert’s analysis in 1952: 105) agrees with Goetze that assuming a meaning ‘king / queen’ for the onomastic element *-ḥšu(šar)* is unattractive. He points out (*ibid.*: 301–2) that in HLuwian a noun *hasu-* exists that means ‘offspring’,¹⁵⁵ which would fit Goetze’s analysis. Moreover, Laroche argues that HLuw. *hasu-* may ultimately be identical to Hitt. *ḥaššu-* ‘king’, since the meaning of this latter word may then have developed out of an earlier meaning ‘descendant, born’ through the concept that the Hittite king was “*un primus inter pares, le plus racé des nobles*” (1966: 302). Since then, this analysis seems to have been generally accepted.¹⁵⁶

153 According to Bossert, support for this idea may come from a bilingual seal attested on a bulla from Tarsus (TARS 1, cf. Goetze 1936), where the cuneiform inscription reads *miš-pu-daḥ-šu* LUGAL.GAL DUMU *pa-ri-ja-ua-at-ri* ‘Išpudaḥšu, Great King, son of Parijaḡatri’, and the hieroglyphic inscription reads TONITRUS REX VITA BONUS₂. Since VITA and BONUS₂ are only of symbolic value, Bossert assumes that the name of *mišpudaḥšu* is rendered by the hieroglyphic signs TONITRUS REX. Since it was at that time already known that REX denoted ‘king’, he sees this as a confirmation that the element *-ḥšu* denotes ‘king’ (1946: 162). However, nowadays an equation between the name of *mišpudaḥšu* and TONITRUS REX is not assumed anymore (e.g. Laroche 1966: 299). Note, however, that Zehnder’s remark that Bossert’s analysis of *-ḥšu(šar)* is solely based on the “irrigle Gleichsetzung” of *mišpudaḥšu* with TONITRUS REX (2010: 74) does not do justice to Bossert’s argumentation, which is more extensive than that.

154 According to Goetze (1954a: 354), the name **taruḥšu-* as attested in Hittite texts (nom.sg. [...] *-šu-uš* (KBo 3.1 + KBo 12.5 ii 69), acc. [**t*] *a-ru-uḥ-šu-un* (*ibid.* ii 8), **ta-ru-uḥ-š[u-un]* (*ibid.* ii 27), gen.sg. **ta-ru-uḥ-šu-uš* (*ibid.* ii 53)) indicates that the second element in all these names was *-ḥšu*, not *-aḥšu*. Zehnder (2010: 74) states that this need not be the case, since **taruḥšu-* “könnte durch Synkope *uwa > u* aus **Taruw-aḥšu* entstanden sein”. As far as I am aware, however, such syncopes are not regular in Hittite. Since the sign *uḥ* can also be read *aḥ* (and *eḥ* and *iḥ*) one could, in principle, argue that the spelling **ta-ru-Vḥ-šu-* should be read **ta-ru-aḥ-šu-*, but in view of the absence of a spelling **ta-ru-ua-aḥ-šu-* this does not seem likely to me. I therefore agree with Goetze that **taruḥšu-* indicates that the element was *-ḥšu-* and not *-aḥšu-*.

155 Attested in KARATEPE 1 § 15.

156 Cf. e.g. Zehnder 2010: 73–4.

An Indo-European Anatolian analysis of the element *-ḫšu(šar)* also makes sense because many of the elements preceding it fit in well with such an interpretation (cf. Laroche 1966: 298–9 for a list). For instance, the element *ilalia-* in *ilaliaḫšu* could then be equated with the Hittite verbal stem *ilaliḫe/a-^{zi}* ‘to desire’, which would give for *ilaliaḫšu* a meaning ‘desired son’. Likewise, the element *apizia-* in *apiziaḫšu* could then be equated with the Hittite adjective *appezziḫa-* ‘backmost, rear’ (note that Kanišite *i* can stand for both /i/ and /e/, cf. § 3.1.3), which would give for *apiziaḫšu* a meaning ‘last/youngest son’. In the same vein, the element *šupia-* in *šupiaḫšu(šar)* could then be equated with the Hittite adjective *šuppi-* ‘purified, sacred’ (cf. section 5.1 and § 5.3.136 for a treatment of the *-a-* in *šupia-*), which would give for *šupiaḫšu(šar)* a meaning ‘sacred son / daughter’. Similarly, the element *niwa-* in *niwaḫšu(šar)* could then be equated with Hitt. *neḫa-* ‘new’ (with Kanišite *i* = /e/, cf. § 3.1.3), which would give for *niwaḫšu(šar)* a meaning ‘new son / daughter’. Importantly, if this latter equation is correct, it would point to a specifically Hittitoid instead of Luwic nature of this name, since the Luwian counterpart of Hitt. *neḫa-* is *nāḫa/i-* (cf. also Zehnder 2010: 73).

Although it was stated in section 2.2 that theoretically it is difficult to give absolute proof for the linguistic identification of personal names when their semantics are unknown, in this case the identification of the element *-šar* as a morpheme that indicates feminine gender does virtually prove its Indo-European Anatolian character. In this light, the equation of the preceding element *-ḫšu* with HLuw. *hasu-* ‘offspring’ and Hitt. *ḫaššu-* ‘king’ (< *‘descendant’) becomes an attractive hypothesis. The choice between a more Luwic or Hittitoid character of the names in *-ḫšu(šar)* is narrowed down by the fact that several of the elements preceding this element resemble Hittite, but not Luwian, lexemes. Moreover, a Hittite reading of these initial elements in combination with the element *-ḫšu(šar)* ‘son/daughter’ makes way to interpreting these names as compound names with meanings like ‘desired son’, ‘youngest son’, etc.,. Since such meanings have parallels in the semantics of compound names in other languages, they form an extra support for the interpretation of these names as Hittitoid.

All in all, it seems justified to state that a Hittitoid identification of the names ending in *-ḫšu* and *-ḫšušar* can be regarded as certain. This does not mean, however, that all details regarding their interpretation are clear: cf. § 5.2.6 and 5.2.7 for a more detailed treatment of these elements.

4.3.2 *Compound Names in -uman*

The initial elements of the compound names in *-ḫšu* and *-ḫšušar* are also found in combination with several other elements, one of which is *-uman*,

which always forms masculine names. For instance, besides *ḥaršumnaḥšu* we find *ḥaršumnuman*; besides *ḥištaḥšu* we find *ḥištuman*; besides *ilaliaḥšu* we find *ilaliuman*; etc. Note that in all these cases the final *-a-* of the first element is dropped before *-uman*.

The element *-uman* has already by e.g. Landsberger (1924: 226) and Goetze (1931) been equated with the Hittite ethnic suffix *-umen-* / *-umn-*, which forms derivatives of toponyms, like ^{LÚ}*nešumen-* ‘coming from Nēša’ or ^{URU}*ḥattušumen-* ‘person from Ḥattuša’ (note that also in Hittite the *-a-* of the first element is dropped).¹⁵⁷ This equation is attractive since, as Goetze shows, some of the elements preceding *-uman* in the Kanišite names are identical to geographical names. For instance, the name *akaliuman* may then be compared with the toponym ^{URU}*akališa*,¹⁵⁸ or *ḥaršumnuman* with ^{URU}*ḥaršumna*.¹⁵⁹ If the interpretation of the Kanišite element *-uman* as an ethnic suffix that can be equated with Hitt. *-umen-* / *-umn-* is correct, it points to a specifically Hittitoid identification as well, since in Luwian the corresponding suffix has the shape *-uann(i)-*.¹⁶⁰ Cf. § 5.2.13 for a more detailed treatment of *-uman*.

4.3.3 Compound Names in *-nika*

Some of the elements that combine with *-ḥšu(šar)* and *-uman* are also found with the element *-nika*, which always forms women’s names. For instance, besides *šamnaḥšu* and *šamnuman*, we find *šamnanika*; besides *šupiaḥšu*, *šupiaḥšušar*, and *šupiuman*, we find *šupianika*; etc. It was Laroche (1966: 308) who first equated the element *-nika* with the Hittite noun *nēka-* ‘sister’ (note that Kanišite *i* can represent /e/, cf. § 3.1.3), an equation that perfectly fits the feminine gender of these names. This equation, which has been generally accepted, would point to a specifically Hittitoid interpretation of these names as well, since the Luwian word for ‘sister’ is *nanašri-*. Cf. § 5.2.12 for a more detailed treatment of *-nika*.

4.3.4 Other Compound Names

The elements that combine with *-ḥšu(šar)*, *-uman*, and *-nika* are also found in combination with a limited number of other elements, namely *-ala* (m./f.), *-ali* (m.), *-an* (m.), *-ašu* (m.), *-ašue* (f.), *-kunian* / *-kunien* (f.), *-la* (m.), *-lka* (f.), and *-mei* (m.). As we will see in their individual treatments in section 5.2,

¹⁵⁷ Landsberger’s only example for this equation is the name *Dunumna*, which he analyses as “der Mann von Dunna”. However, as will be argued in footnote 479, this name probably cannot be analysed in this way.

¹⁵⁸ In fact ^{URU}*ankališa*, cf. Del Monte & Tischler 1978: 3, 17.

¹⁵⁹ Cf. Del Monte & Tischler 1978: 91.

¹⁶⁰ Cf. Kloekhorst 2008: 914–5.

the majority of these elements can straightforwardly be equated with Hittite lexemes or morphemes, which again supports a Hittitoid identification of these names.

In this way, we can identify in total 263 Kanišite personal names that with a high degree of certainty belong to this complex of Hittitoid compound names, whereas another 71 names may belong here (although their appurtenance is less certain). This large body of material will be presented in Part II of this book, where each of these names will receive a detailed analysis.

4.4 Arguments for a Luwic Identification

Although from the substratum influence on Old Assyrian not a single assuredly Luwian feature is known, it has in the past been suggested that some of the Kanišite personal names have a Luwic background. The most recent treatment of this possibility has been given by Yakubovich (2010: 208–223).¹⁶¹ According to him, in order to be sure that a name is of a Luwic origin, it “should either display a phonetic innovation peculiar of the Luwic subgroup, or contain two roots that occur in Luvian but not in Hittite. In addition, we must be able to account for every morpheme of the forms under consideration in terms of Luvian grammar” (*ibid.*: 211). Working from these criteria, Yakubovich cites sixteen names of which, in his view, a Luwic origin is “assured”. I will treat these names one by one.

ḥa-wa-wa-šu (kt m/k 36: 3) can according to Yakubovich be analysed as a compound name consisting of Luw. *ḥawa/i-* ‘sheep’ and *wašu-* ‘good’. This is a possibility, but cannot be independently argued. Moreover, note that the sign *wa* is phonetically ambiguous: it can be read *we*, *wi* and *wu* as well.

ḥa-wi-li-a (RA 58, 126: 35) is analysed by Yakubovich as containing the nominal stem *ḥawa/i-* ‘sheep’, enlarged by the adjectival suffix *-ili*. Note that reading *wi* instead of *wa*, *we* or *wu* cannot be independently argued: the form could also be *ḥawalia*, *ḥawelia* or *ḥawulia*.

ku-ul-zi-a (KTS 2, 6: 4) is interpreted by Yakubovich as consisting of the divine name ^d*gulza-* ‘(personified) Destiny’ followed by the adjectival suffix *-iya-*. However, as Waal (2014) has convincingly argued, the name of these fate-goddesses, which were formerly read ^d*gul-še-eš* (in Hittite) and ^d*gul-za-* (in Luwian), must in fact be read ^d*GUL-še-eš* and ^d*GUL-z^o* (in

¹⁶¹ Superseding the treatments of Goetze 1954b: 75f. and Carruba 1992; especially the former has in the meantime become largely outdated.

which the sign GUL is a sumerogram), representing the phonetic shapes *kuḫa(n)šeš* and *kuḫanz-*, respectively. This new interpretation¹⁶² makes Yakubovich's analysis of the name *kulzia* obsolete.

mu-a-na-ni (ICK 1, 115: 9) is interpreted by Yakubovich as a compound name consisting of the Luwian elements *muwa-* 'might' and *nana/i-* 'brother'. It is problematic, however, that this name refers to a woman. Yakubovich tries to bypass this problem by stating that we may have to interpret this name as "an exocentric compound "one who has the strength of her brother" (or something similar)" (2010: 218). This does not seem attractive, however. As an alternative, he states that "one can hypothesize that **nana/i-* in this period [i.e. the *kārum*-period, AK] functioned [as] an undifferentiated word for 'sibling', whereas *nanasri-* 'sister', attested in Iron Age Luvian, represents a later formation" (*ibid.*), an idea that may have some merit. However, as Yakubovich notices himself as well (*ibid.*: 218–9), there are several other names ending in *-nani*, none of which have an initial element that resembles anything Luwian: *ḫamanani*,¹⁶³ *ḫamištanani*,¹⁶⁴ *ḫurtunani* (g.u.),¹⁶⁵ *malanani*,¹⁶⁶ *šalanani*,¹⁶⁷ *šanišanani*,¹⁶⁸ *tilinani*,¹⁶⁹ *tuališanani*,¹⁷⁰ *tuzanani*,¹⁷¹ *ušnani* / *wašnani* (cf. below). To my mind, a Luwic identification of the name *muananani* therefore becomes doubtful as well.

mu-da-li-a (kt s/t 92 [1b]: 7) is interpreted by Yakubovich as consisting of the Luwian adjective *muwattalla/i-* 'mighty' to which a suffix *-iya-* is added. Although at first sight this interpretation may look appealing, it is awkward that it needs to invoke a syncope (Luw. *muwa-* > Kanišite *mu-*), and a 'wrong' spelling of the dental stop (Luw. *-tt-* = [-tɬ-] vs. Kanišite *-d-* = [-d-]).¹⁷²

162 The objections against Waal's interpretation as raised by Yakubovich 2013–2014 and Melchert 2016a are entirely unconvincing.

163 *ḫa-ma-na-ni* (Liv 8: 5).

164 *ḫa-mi-iš-ta-na-ni* (CCT 5.9b: 8, 13, 17, 26).

165 *ḫu-ur-tù-na-ni* (AKT 5, 54: 14).

166 *ma-lá-na-ni* (kt m/k 179: 12).

167 *ša-lá-na-ni* (kt m/k 22: 8).

168 *ša-ni-ša-na-ni* (kt s/t 93 obv. 3).

169 *ti-li-na-ni* (MAH 19616: 11).

170 *tù-a-li-ša-na-ni* (kt s/t 93 rev. 3).

171 *tù-za-na-ni* (CCT 5.20a: 5).

172 Note that Yakubovich cites this name as "*mu-tá-li-a*", in which the sign DA is transliterated as *tá*. However, as we have seen in § 3.2.10, the signs TA and DA seem to have been phonemically distinct, so that the spelling with the sign DA should be taken seriously.

pu-na-mu-wa-tí (WAG 48/1464 [1b]: 6) is analysed by Yakubovich as consisting of Luw. *puna-* ‘all’ and *muwa-* ‘might’. He does not give an interpretation of the element *-ti*, however.

pu-nu-wa-šu (kt d/k 2: 6) is interpreted by Yakubovich as consisting of Luw. *puna-* ‘all’ and *wašu-* ‘good’. He does not explain, however, why here the initial element would be *pun-* only, and not *puna-*, as visible in the preceding name. To be fair, this name is cited by Hecker (aATU) as “*Pu-na-wa-šu*” (thus also OAPD, who cites for this text a name “Bunawašu”), which may indicate that Yakubovich’s rendering of the name as *pu-nu-wa-šu* is a typo, and that he meant *pu-na-wa-šu* as well. If so, an analysis as *puna-* + *wašu-* makes more sense. However, since the tablet on which this name occurs (kt d/k 2) is unpublished, the true reading of this name cannot at this moment be verified.

ru-wa-tí-a (kt g/t 36 [1b]: 10) and *ru-tí-a* (kt 94/k 833) are both analysed by Yakubovich as representing the Luwian theonym *runtiṭa-*. He does not explain, however, why the former would contain an *a* whereas the latter does not.¹⁷³

tí-wa-li-is (kt s/t 92 [1b]: rev. 12) and *tí-wa-tí-a* (kt s/t 92 [1b]: obv. 8) are connected by Yakubovich with the Luwian theonym *tiwad-* ‘sun-god’.¹⁷⁴ He does not specify, however, why the former name contains an *l* where *tiwad-* has a dental stop, nor why it ends in *-is* (i.e. *-iz*). The interpretation of the latter name as a derivative in *-iya-* of the theonym *tiwad-* would in principle formally work.

wa-šu-na-ni (ICK 1, 71: 14), *wa-áš-na-ni* (TC 2, 37: 22, 30, 32),¹⁷⁵ and *uš-na-ni* (TC 3, 104: 12) are interpreted by Yakubovich as representing a single name, which can be analysed as consisting of Luw. *wašu-* ‘good’ and *nana/i-* ‘brother’.¹⁷⁶ He does not explain, however, why in the latter two forms the *u* of *wašu-* would be lost. Yet a larger problem is that the name that Yakubovich cites as “*wa-šu-na-ni*” (ICK 1, 71: 15) is read by Hecker (aATU) and CDLI as *wa-áš-na-ni* (note that the signs ŠU (𐎶) and ÁŠ (𐎶𐎵))

¹⁷³ Note that he cites the name of the deity as “*Ru(w)ntiṭa-*”, in which the presence of the *w* between brackets may be meant as a way to account for the spelling *ru-wa-tí-a*. However, Yakubovich does not make this explicit, and the exact rationale behind it escapes me.

¹⁷⁴ At least, this is my interpretation: Yakubovich does not specify for each name the reason for inclusion in the table of “assured” Luwic names, but only gives a more general statement on why the names in this table are supposed to be Luwic.

¹⁷⁵ Also attested on BIN 4, 40: 3.

¹⁷⁶ Similarly Zehnder 2010: 88, who refers to “^(m)*Wašunani* [...] ‘guter/lieber Bruder’”.

are relatively similar to each other),¹⁷⁷ and would thus be identical to the *wašnani* of TC 2, 37 and BIN 4, 40. We can conclude that a name “*wašunani*” probably did not exist at all, but was in fact *wašnani*,¹⁷⁸ and that a connection with Luw. *wašu-* thus becomes problematic. If we add to this insight the fact that we have seen above that none of the other names in *-nani* have a first member that looks specifically Luwic, we may conclude that a Luwic interpretation of these names is best forgotten.

wa-wa-lá (CCT 1, 11: 7, 16) is analysed by Yakubovich as containing the Luwian noun *wawa/i-* ‘cow’. He does not make explicit, however, what the element *-(a)la-* should be.

wa-wa-li (KUG 41: 2) is interpreted by Yakubovich as containing the Luwian noun *wawa/i-* ‘cow’ and the adjectival suffix *-alli-*.

As we see, of the sixteen names that according to Yakubovich can “assuredly” be interpreted as Luwic, upon close scrutiny only six remain for which a Luwic interpretation could in principle formally work: *hawawašu*, *hawilia*, *punawašu* (if Yakubovich’s “*punuwašu*” is a typo), *rutia* (if we ignore the seemingly variant *ruwatia*), *tiwatia*, and *wawali*. Note that five of these contain one or more instances of the sign *wa/we/wi/wu*, which is ambiguous regarding its reading, so that the reading given here cannot be independently proven. Moreover, only three of these would share an element (*hawawašu*, *hawilia* and *punawašu*),¹⁷⁹ which is a totally different situation from the one regarding the names that can be identified as Hittitoid.

Next to these “assuredly” Luwic names, Yakubovich cites 25 names that to his mind are “likely” Luwic (2010: 214–5): *a-ra-mu-wa* (kt o/k 103: 6), *ha-wa-a* (kt b/k 176: 3), *hu-da-ar-lá* (OIP 27, 27: 3), *hu-tár-lá-ni* (ICK 4, I 837: 1), *ku-lá-na-lá* (kt g/t 36 [1b]: 16), *ku-lá-na-aḫ-šu-šar* (kt 89/k 282: 3), *ku-ul-zi-ar* (KTH 22, 3: 5), *la-[ba]-ar-na-áš* (kt 88/k 713 [1b]: 3), *pu-na* (Sch. 17 (Garelli 1964: 117): 5), *ša-da-a[h-š]u* (TC 1, 99: 4), *ša-da-aḫ-šu-šar* (ICK 1, 24a: 3; ICK 1, 24b: 3, 5), *šu-pi-lá-áp-ra* (KUG 8: 7), *ú-pá-ti-a-aḫ-šu* (TC 3, 191: 16), *ú-ra-ni* (MAH 16552 (Garelli 1965: 26–7): 8), *ú-ra-nu-ma-an* (kt d/k 30a (= AKT 10, 42b): 2), *ú-ra-a* (Sch. 22

177 A similar confusion may have caused Laroche’s citation (1966: 206) of the names of TC 2, 37: 22, 30, 32 as “*wa-šu-na-ni*”, whereas they clearly read *wa-áš-na-ni* (cf., for instance, the attestation of line 22: .

178 If the name *ušnani* is indeed to be equated with *wašnani*, we would be dealing with an underlying form */wsnani/* (cf. § 3.2.1).

179 Yakubovich states that the names *hawilia* and *wawali* are “structurally similar”, but, according to his own interpretation, this is incorrect: the former would in Yakubovich’s interpretation consist of *hawa/i-* + *-illi-* + *-iya-*, whereas the latter would consist of *wawa/i-* + *-alli-*. They therefore cannot be used as examples for Yakubovich’s statement that these names “display a high degree of internal cohesion [...], which vindicates the correct segmentation of the respective lexemes” (2010: 213).

(Garelli 1964: 124–7): 38), *ut-ni-aḫ-šu* (EL 7: 16), *wa-at-ni-aḫ-šu* (kt m/k 179: 20), *wa-lá-áp-ra-a* (TC 3, 191: 22), *wa-ša-tap-ra* (kt 89/k 383: 2), *zi-da* (kt 90/k 176: 18), *zi-da-ni* (kt 94/k 833), *zu-ú-a* (ICK 1, 137: 8), and *zu-a-ni-a* (CCT 1, 7a: 19). According to Yakubovich, their Luwic character can be inferred from the fact that they contain elements that resemble the following Luwian words: *ḫawa/i-* ‘sheep’, *ḫutarla/i-* ‘servant’, *ku(wa)lan-* ‘army’, *gulza-* ‘(personified) Destiny’, *muwa-* ‘might (or sim.)’, *puna-* ‘all’, *Šanta* ‘War-god’, **dabra-* ‘rule’, *upati(t)-* ‘demesne’, *ura-* ‘large, great’, **wadni-* ‘country’, *zita/i-* ‘man, human’, *zuwa-* ‘food’, and *zuwan(i)-* ‘dog’.

However, eight of these names contain the very clear Hittitoid elements *-ala*, *-ḫšu*, *-ḫšušar* and *-uman*: *kulanala*, *kulanahšušar*, *šadahšu*, *šadahšušar*, *upatiahšu*, *uranuman*, *utniahšu* and *watniahšu*. These are therefore better analysed as Hittitoid names than as Luwic ones. For instance, the element *utni-* / *watni-* in the name *utniahšu* / *watniahšu* is more likely connected to the Hittite word *utnē* / *utni-* ‘land, country’ than to Luwian **wadni-* (which is even not attested as such).¹⁸⁰ In the case of *uranuman*, Yakubovich’s proposal that it may contain the Luwian suffix *-man* that would derive action nouns (2010: 217) has no merit: this name clearly should be analysed as *uran-uman*, showing the Hittitoid element *-uman* that is found in dozens of other names.

With regard to the other names of Yakubovich’s group of “likely” Luwic names, some interpretations do not make much sense. For instance, his suggestion that the name *zuwa* should be equated with the Luwian word *zuwa-* ‘food’ is unconvincing. In the case of the names *ura* and *urani* Yakubovich himself notes that on prosopographic grounds the individuals carrying these names probably were Assyrians (2010: 216¹⁰). With regard to the name *kulziar*, which Yakubovich connects with Luw. *gulza-* ‘(personified) Destiny’, we have seen above that Waal 2014 has demonstrated that a phonetic form “*gulza-*” never existed.

Moreover, Yakubovich himself notes that, apart from the Luwian elements that he proposes to recognize in these names, they contain other morphemes “the linguistic attribution [of which is] problematic” (2010: 216).

To my mind, the only name of Yakubovich’s list of “likely” Luwic names that may have merit is *ḫudarla*, since its shape is indeed identical to the Luwian word *ḫutarla-* ‘slave, servant’. However, this name is formally also reminiscent of the men’s name *ḫuturla*,¹⁸¹ which seems to belong to the Assyrian inventory of names.¹⁸²

¹⁸⁰ Cf. Melchert 1994a: 317.

¹⁸¹ *ḫu-tù-ur-lá* (BIN 4, 197: 6; BIN 6, 124: 17; ICK 4 I 438: 20, 28, 31).

¹⁸² The man called *ḫuturla* on BIN 4, 197 is the father of *aššur-bani*, and the *ḫuturla* of ICK 4 I 438 is a son of *aššur-malik*.

A third group of names that Yakubovich (2010: 217–8) interprets as Luwic consists of six names ending in *-wani*: *a-lá-ú-a-ni* (TC 3, 123: 1), *a-ni-wa-a-ni* (kt 94/k 1389: 2), *a-wa-wa-ni* (kt n/k 32 [1b]: 11), *ḥa-az-za-wa-ni* (TC 2, 37: 31), *wa-ni-i* (kt k/k 14a [1b]: 9; kt k/k 14b [1b]: 5), *wa-áš-ḥu-wa-ni* (kt d/k 23a (= AKT 10, 35b): 2). Since two of these names refer to women (*awawani* and *wani*; the gender reference of the other names cannot be determined), Yakubovich proposes that the element *-wani* “may be related to the Luvian word *wana/(i)-‘woman’*” (2010: 217). This may indeed have some merit. It must be remarked, however, that the Cuneiform Luwian word for ‘woman’ is not attested in the nominative or accusative case, and that therefore diagnostic forms are missing for determining whether it is an *i*-mutated stem or an *a*-stem. If it is an *a*-stem (cf. e.g. Melchert 1993: 254, who cites this word as *ṽānā-*), a connection with the Kanišite element *-wani* would be difficult.¹⁸³ As an alternative option, Yakubovich states that *-wani* “can be interpreted as the Luvian adjectival suffix *-wanni-*” (*ibid.*), which is the etymological counterpart of the Hittitoid suffix *-uman* (~ Hitt. *-umen-* / *-umn-*), both reflecting PIE **-h₂uen-*.¹⁸⁴ Although formally this connection would work, there are no real indications that point to such an interpretation of *-wani*. For instance, none of the initial elements of the names containing *-wani* is evidently to be equated with a toponym (which is in fact the case of many Hittitoid names in *-uman*). Furthermore, such an interpretation does not make sense for the independent name *wani*: the suffix *-wann(i)-* should always be attached to another stem. Moreover, the corresponding Hittitoid names in *-uman* always refer to men, whereas at least one name in *-wani* refers to a woman (*awawani*). These points are not favourable to an equation of Kanišite *-wani* to the Luwian suffix *-wann(i)-*. All in all, a Luwic background of these six names ending in *-wani* cannot be assured: a connection with the CLuwian word for ‘woman’ may have some merit, but only if it is *i*-mutated, *ṽāna/i-*, which is not fully clear.

Another group of names treated by Yakubovich (2010: 219–20) are the ones ending in *-wašḥe*:¹⁸⁵ *alawašḥe* (f.),¹⁸⁶ *kualšawašḥe* (f.),¹⁸⁷ *kušawašḥe* (f.),¹⁸⁸

183 Stefan Norbruis informs me (p.c.) that Luwian *a*-stem nouns show the dat.-loc.sg. ending *-a*, which is distinct from the ending *-i* as found in *i*-mutated stems. Since the dat.-loc. sg. of ‘woman’ in Cuneiform Luwian is attested as *ṽāni*, this would point to an *i*-mutated stem *ṽāna/i-*.

184 Kloekhorst 2008: 914–5.

185 Cf. also the name *malawašḥena* (f.) (*ma-lá-wa-áš-ḥe-na* (TC 1, 100: 11)), which seems to contain an extra *-na*.

186 *a-lá-wa-áš-ḥe* (TC 3, 238a: 4 (<*-lá->*); TC 3, 238b: 5).

187 *ku-al-ša-wa-áš-ḥe* (AKT 10, 9a: 5; AKT 10 9b: 3, 9). Note that OAPD reads this name as “Mašawašhi”, i.e. with the sign MA instead of with KU.

188 *ku-ul-ša-wa-áš-ḥe-e* (kt m/k 170: 4, 10).

liliwašhe (f.),¹⁸⁹ *madawašhe* (g.u.),¹⁹⁰ *malawašhe* (f.),¹⁹¹ *mali(a)wašhe/a* (f.),¹⁹² *maliniwašhe* (g.u.),¹⁹³ *mawašhe* (g.u.),¹⁹⁴ *titawašhe* (f.).¹⁹⁵ Whenever the gender reference of these names can be established, we are dealing with women's names, and we are therefore likely dealing with a coherent group. The element *-wašhe* is usually spelled *-wa-áš-ḪE/I*, which in principle could be read *-wašhi* as well. However, the few plene spellings *-wa-áš-ḪE/I-e* (e.g. *ku-ul-ša-wa-áš-ḫe-e*, *ma-lá-wa-áš-ḫe-e*) indicate that we should read the sign ḪE/I with its *e*-value here: *-wašhe*. According to Laroche (1966: 326), the names in *-wašhe* can be compared to three names found in Hittite texts from Ḫattuša: *ʿāššuiyašha*,¹⁹⁶ *ʿḫaruašha*,¹⁹⁷ and *ʿlalantiyašha*.¹⁹⁸ It is indeed striking that these three are female names as well, but the fact that the Kanišite element is *-wašhe*, with a final *-e*, whereas the attestations from Hittite texts clearly contain *-uašha*, with a final *-a*, makes a connection difficult. Laroche points out that the initial elements *ala-*, *ḫarua-* and *mala-* occur with the second element *-ziti* as well (*ʿma-la-LÚ*, *ʿḫar-ua-LÚ-ti-*, *ʿma-la-LÚ* / *ʿma-la-zi-ti-*, all attested in Hittite texts from Ḫattuša).¹⁹⁹ Since *ziti-* is a Luwian word, Laroche compares the element *-wašhe/a* to the Luwian word *uašha-* 'sacrifice (*vel sim.*)' (1966: 326–7). In the same vein, Yakubovich (2010: 219–20) states that *-wašhe*, because it "frequently co-occurs with divine names, such as Gulsa, Maliya, possibly Ala and Lilaya", may be compared to the Luwian adjective *uašḫaija-* 'sacred', which would yield meanings like "Sacred to Maliya", etc.

To my mind, however, the Luwic interpretation of these names is relatively weak. I find it problematic that *-wašhe* contains a clear *-e*, whereas it is generally recognized that the Luwian language did not contain a phoneme /e/. Moreover, Yakubovich's interpretation of some initial elements as representing

189 *li-li-wa-áš-ḫe* (AKT 10, 46a: 3).

190 *ma-da-wa-áš-ḫe* (BIN 6, 52: 2).

191 *ma-la-wa-áš-ḫe* (AKT 10, 55a: 16; AKT 10, 55b: 4 (*ma-la-wa[...]*), *ma-lá-wa-áš-ḫe* (AKT 8, 299: 3; kt m/k 172: 5), *ma-lá-wa-áš-ḫe-e* (kt m/k 172: 11).

192 *ma-li-wa-aḫ-šé* (EL 303a: 1), *ma-li-wa-áš-ḫa* (EL 303a: 12), *ma-li-a-wa-áš-ḫe* (EL 303b: 5). All three attestations are found on a single pair of tablet + envelope. Note the metathesis of *-šḫ-* to *-ḫš-* in the spelling *ma-li-wa-aḫ-šé*. The one spelling with *-wa-áš-ḫa* is remarkable, but is probably a mistake (the presence of word-final *-e* is guaranteed by the two other spellings).

193 *ma-li-ni-wa-áš-ḫe* (ICK 4, I 604: 21).

194 *ma-wa-áš-ḫe* (CCT 5, 48b: 3; CCT 5, 48c: 5, 8).

195 *tí-ta-wa-áš-ḫe* (kt j/k 288b: 1, 12).

196 *ʿa-aš-šu-i-ua-aš-ḫa* (KUB 39.98, 7 (*ʿa-aš-šu-ḫ[...]*), 11).

197 Nom.sg. *ʿḫar-ua-ú-ua-aš-ḫa-aš* (KBo 10.10 iii 9).

198 *ʿla-la-an-ti-ua-aš-ḫa* (KUB 34.58 i 3, 6, 8).

199 Cf. Laroche 1966: 27, 62, 110 for attestations.

Luwian theonyms is not very attractive. First, as we have seen above, the theonym *gulša-* probably did not exist,²⁰⁰ and if it did, its Luwian variant should have ended in *-za-*, not *-ša-*. Second, the theonym *maliḫa-* would be found in one attestation only, which is duplicated two times by *mali-*. Besides that, none of the other initial elements of the names in *-wašḫe* look very Luwian. In fact, they seem to show strange alternations (there is *ala-* next to *mala-*; there is *ma-* vs. *mada-* vs. *mala-* vs. *mali-* vs. *malina-*), which do not look Luwic.

All in all, we may conclude that, although it formally is possible that some of the Kanišite names are of a Luwic origin (*ḫawawašu*, *ḫawilia*, *ḫudarla*(?) and *punawašu*, perhaps the names in *-wani*), this assumption is beset with so many uncertainties, and the number of these names is so low, that we cannot draw any firm conclusions on them.²⁰¹ They certainly cannot be used as a secure argument that Luwians formed an ethnic minority in Kaniš (as rightfully remarked by Yakubovich 2010: 222 as well)²⁰² or that Luwian was a language spoken by its indigenous population.

4.5 Arguments for a Hurrian Identification

In a 2008 article, Wilhelm extensively treats the presence of Hurrians in the Old Assyrian texts from Kaniš, focusing especially on personal names from these documents that can be interpreted as Hurrian. He warns however, that “not all the Hurrian names in Kültepe texts can be used for defining the linguistic status of Hurrian in the West [i.e., Anatolia, A.K.]. Assyria itself borders Hurrian-speaking areas, and Assyrians operating in Anatolia may have born Hurrian names, or they may otherwise be related to Assyrians with Hurrian names” (Wilhelm 2008: 181–2). In other words, the presence of Hurrian names in the texts from Kaniš does not necessarily mean that the people bearing these names belong to the local population.

In Wilhelm’s view, it is necessary to have strict criteria for assigning names to Hurrian in order to “guarantee the exclusion of linguistically insufficiently defined names” (2008: 182). He therefore argues that we can only regard as certified Hurrian names that show the following structures (I cite here only a selection of his examples, cf. Wilhelm’s article for the entire material):

200 Waal 2014.

201 I am happy to see that Simon 2016 has come to largely the same conclusions as I have.

202 Yakubovich’s hypothesis that these names, which he regards as assuredly Luwian, were borrowed into Hittite because Luwian culture had a “high prestige [...] among the Hittites”, seems unjustified to me.

1. sentence-names with a finite verb in initial position, e.g. *na-ni-ip-LUGAL* (TC 1, 33: 10) = *nan=i=b-Šarri* ‘the (divine) king ...-ed (it)’; *ḥa-ši-im-na-wa-ar* (KTS 2, 29: 9) = *ḥaž=i=m(<b)-Nawar* ‘Nawar listened’.
2. sentence-names consisting of a nominal sentence (some with a connecting morpheme *-n-* or *-m-*), e.g. *a-ra-ši-ḥa-tal* (kt c/k 440: 33) = *Araššig-adal* ‘the Tigris is strong’; *ku-pi-na-tal* (TC 3, 91: 49) = *Kubi-n-adal* ‘Kubi is strong’; *ip-ri-ma-da-al* (kt g/k 188: 4, cf. Donbaz 1965: 148¹) = *evri-m-adal* ‘the lord is strong’.
3. names of the structure noun + */-am/*, e.g. *ḥu-pi-da-am* (CCT 1, 9b: 21) = *ḥubid(i)=a=m* ‘he is like a bull-calf’.

According to Wilhelm, “many other names attested in Old Assyrian texts from Anatolia that have been considered Hurrian, are too short for a sound judgement. Their linguistic background remains in the dark” (Wilhelm 2008: 185).²⁰³ He therefore concludes that “unambiguously Hurrian names are very rare [in Old Assyrian texts]”, and that therefore “[t]here is no reason to assume that in Kaneš and its vicinity Hurrian was a language spoken by the indigenous population” (*ibid.*: 185–6).

4.6 Arguments for a Hattic Identification

The first scholar who states that the Old Assyrian texts from Kaniš contain Hattic names is Bilgiç (1945–1951), who formulates several formal criteria that would reveal their origin. However, as Soysal remarks, many of Bilgiç’s analyses are “angesichts der gegenwärtigen Kenntnislage dieser Sprache nunmehr stark korrekturbedürftig” (Soysal 2004: 5¹¹). Nevertheless, one of Bilgiç’s ideas, namely that the Kanišite names ending in *-il* may be Hattic because this latter element can be equated with the “als protochattische Nisbe-Endung bekannte suffix” of the same shape, is nowadays generally accepted, cf. Lewy 1950: 408,²¹⁸ 412²⁶⁵ (independently?); Laroche 1951: 106; Garelli 1963: 153; Soysal 2004: 5.²⁰⁴ The names that possibly contain this element are: *aniškipil* (m.),²⁰⁵

203 Cf. collections of Hurrian names from Old Assyrian texts by e.g. Garelli: 1963: 155–8 and Kammenhuber 1977: 142–3.

204 Although nowadays Hattic *-il* is identified as a more general “Zugehörigkeitssuffix bei männlichen Wesen” (Soysal 2004: 180).

205 *a-ni-iš-ki-pi-il*₅ (TC 3, 191: 33).

ḥatušil (m.)²⁰⁶ (according to Bilgiç 1945–1951: 5 derived from the city name URU*ḥattuš*²⁰⁷), *ḥazamil* (m.),²⁰⁸ *ḥazimil* (m.),²⁰⁹ *ka/izḥanuil* (m.),²¹⁰ *tukail* (m.),²¹¹ and *ulamil* (g.u.)²¹² (according to Bilgiç 1945–1951: 5 derived from the city name URU*ullamma*²¹³).

Garelli (1963: 152–3) adds to this view that also names in *-ili* / *-li* may be regarded as Hattic since the suffix *-(i)li* would be derived from *-il*.²¹⁴ He cites as examples: *kazapali* (g.u.)²¹⁵ (according to Garelli 1963: 153 derived from the toponym URU*kazzapa*²¹⁶), *kudarili* (m.)²¹⁷ (according to Garelli 1963: 153 derived from the toponym URU*kuntara*²¹⁸), and *šimitili* (m.).²¹⁹ Other names ending in *-(i)li* that are possibly derived from toponyms are: *ḥašui* (g.u.)²²⁰ (from URU*ḥaššuḥa*²²¹), *ḥatili* (g.u.)²²² (from URU*ḥattum*), *ḥurmili* (m.)²²³ (from

206 *ḥa-tù-ší-il₅* (OIP 27, 14: 4, 19 ([*ḥa*]-*tù-ší*[-*il₅*]; kt 98/k 107: 8; kt 01/k 287: 151), *ḥa-tù-ší-il* (kt 98/k 108: 6).

207 Cf. Nashef 1991: 57–8.

208 *ḥa-za-mi-il₅* (AKT 10, 38a: 15; AKT 10, 38b: 1; AKT 10, 40a: 18; AKT 10, 40b: 1; AKT 10, 54a: 12; AKT 10, 54b: 2; JCS 14, 12: 2, 8), *ḥa-za-mi-il* (AKT 10, 62a: 18 (-[*z*]-*a*); AKT 10, 62b: 1 ([...-*z*]-*a-mi*-[...])). Note that in kt 94/k 362: 20 we find the spelling *ḥa-za-mi-li* (courtesy Barjamovic), ending in *-ili*, not *-il*.

209 *ḥa-zi-mi-il₅* (AKT 3, 42: 18; TPAK 1, 121: 2 (-<*zi*>-)). Note that Michel & Garelli (1997: 190) state that for *ḥa-<zi>-mi-il* in TPAK 1, 121: 2, “une autre restitution est également possible”.

210 *kà-az-ḥa-nu-il₅* (TC 3, 97: 4, 19), *ki-iz-ḥa-nu-wi-il₅* (KTS 1, 3a: 16), *ki-iz-ḥa-nu-il₅* (BIN 6, 227: 11; RA 59, p. 25 nr. 6: 5). According to Veenhof 2017 (= AKT 8): 291, the name *kà-az-kà-nu-i-il₅* (AKT 8, 203: 9) may represent a “phonetic variant” of *kazḥanuil*.

211 *tù-kà-il₅* (TC 3, 158: 22). Note that e.g. aATU transliterates *ki-tù-kà-il₅*, but according to Veenhof 1972: 26, the sign KI should be rather taken as the sumerogram meaning ‘with’ (note that Garelli 1963: 153 gave this possibility as well).

212 *ú-lá-mi-il₅* (BIN 4, 160: 1).

213 Cf. Nashef 1991: 127–8; Del Monte & Tischler 1978: 451.

214 Stating that the Hattic suffix *-il* is “passé en hittite sous la forme *-ili/-li*” (referring to Laroche 1951: 102, 106). This implies that these names would in fact be Hittitoid. However, also Soysal 2004: 5 cites names in *-(i)li* as Hattic.

215 *kà-za-pá-a-li* (ICK 1, 15: 7).

216 Cf. Del Monte & Tischler 1978: 204–5.

217 *ku-da-ri-li* (BIN 4, 25: 34, 36).

218 Cf. Del Monte & Tischler 1978: 223.

219 *ší-mi-tí-DINGIR* (CCT 1, 24b: 5, 7; KTS 1, 14a: 5; TC 1, 11: 4, 8). Cf. Garelli 1963: 153 and Laroche 1966: 162 for reading this form as *šimitili*, which is based on the attestations of a name ^m*šimitili* in texts from Ḥattuša.

220 *ḥa-šu-i-li* (AKT 6c, 604: rev. 13; AKT 9a, 91: 3), *ḥa-šu-i-lí* (kt 91/k 183: 9 (p.c. J.G. Dercksen)), *ḥa-šu-DIN[GIR]* (kt 91/k 183: 5 (p.c. J.G. Dercksen)).

221 Del Monte & Tischler 1978: 97–9.

222 Cited as “Hatili” by OAPD for the unpublished text kt 91/k 282.

223 *ḥu-ur-mi-li* (kt n/k 32 [1b] (Günbattı 2014, nr. 8): 18; kt 01/k 217 [1b] (Günbattı 2014): 1 (-[*l*])).

URU^{hurma?}²²⁴), *taḥili* (m.)²²⁵ (from ^{HUR.SAG}*taḥa?*²²⁶). The interpretation of other names in *-(i)li* remains uncertain, however.²²⁷

According to Garelli (1963: 153–4), there are also some other characteristics of certain names that could be attributed to a Hattic origin, namely: reduplication (e.g. *ḥadaḥada*, *kadakada*, *kulakula*, *kurukuru*, etc.); resemblance to Hattic nouns or divine names (e.g. *ḥamuria* ~ Hatt. *ḥamuruṣa* ‘beam’, *ḥapatali* ~ ^d*ḥapantali*, *inar* ~ ^d*inar*); and the presence of specific consonant clusters (e.g. *pithana* because of its *-th-*). Most of these connections are too non-specific or simply unlikely (reduplication is found in more languages than just Hattic; why would a person be called after a ‘beam’?; etc.). Only the comparison with Hattic theonyms seems a valid argument: cf. Soysal (2004: 5), who states that *ḥapatali* could “sehr wohl” be Hattic. However, also this criterion has its problematic side: we will see in § 5.3.58 that *inar* also occurs as an element in clear Hittitoid names, which shows that the linguistic appurtenance of theophoric personal names is difficult to ascertain.

All in all, the number of securely Hattic personal names in the Old Assyrian texts is hardly more than a dozen. Moreover, the number of attestations of each of these names is on the low side, too. It must be admitted that our knowledge of the Hattic language is much more rudimentary than of other languages spoken in 2nd millennium BCE Anatolia, so that it certainly cannot be excluded that there are Hattic names in the Old Assyrian texts that we simply do not yet recognize as such, cf. the dozens of names of an unclear origin as treated in the next section.

4.7 Names of an Unclear Origin

Although there are certainly arguments to be given for determining the linguistic background of a large group of Kanišite names (especially the Hittitoid ones: see also Part II of this book), there remains a large amount of non-Assyrian names the linguistic interpretation of which is unclear.

For many of these names this is due to the fact that they are too short to properly interpret, or that they seem to be so-called Lallnamen, i.e. names of

²²⁴ Del Monte & Tischler 1978: 124–6.

²²⁵ Cited as “Tahili” by OAPD for the unpublished text kt 94/k 1294.

²²⁶ Del Monte & Tischler 1978: 374–5.

²²⁷ Although below we will see some names ending in *-ali* that probably are Hittitoid.

the type *arara*, *lili*, *nunu*, *tutu*, etc. It seems quite unlikely to me that we will ever be able to say something meaningful about their linguistic background. These names are:²²⁸ *alili* (m./f.), *alulu* (m.), *alulua* (m.), *anana* (m./f.), *anunu* (m.), *arara* (m.), *atata* (m.), *atu* (m.), *atutu* (m.), *aziza* (f.), *ḥamalimali* (g.u.), *ḥanana* (m./f.), *ḥatutu* (g.u.), *ḥula* (g.u.), *ḥulu* (m.), *ḥunahuna* (f.), *ilila* (m.), *kadakada* (f.), *kakaria* (m.), *kala* (m.), *kalaka* (g.u.), *kalakala* (g.u.), *kalala* (m.), *kalkalia* (m.), *kalula* (g.u.), *kalulu* (m.), *kanakana* (f.), *kanana* (f.), *kanunu* (g.u.), *kanunua* (g.u.), *katutu* (m.), *kazaza* (m.), *kili* (g.u.), *kula* (g.u.), *kulakula* (m.), *kulali* (f.), *kulili* (g.u.), *kulkulia* (m.), *lili* (m.), *lulu* (m.),²²⁹ *manamana* (f.), *maza* (g.u.), *mulu* (m.), *mulua* (m.), *nunu* (m.), *papa* (g.u.), *papala* (m.), *pitipiti* (f.), *pulili* (g.u.), *šululi* (g.u.), *titimi* (f.), *tuda* (m.), *tutu* (m.), *tutuli* (m.), *walawala* (f.), *waliwali* (?) (f.),²³⁰ *waniwani* (?) (f.),²³¹ *zapizapi* / *zipizipi* / *tspitspi* / (f.), *zuza* (m.), *zuzu* (m.).

However, there is also a considerable group of names that have shapes that are too specific to be mere Lallnamen, and which therefore undoubtedly must represent linguistically real forms. Moreover, we sometimes find small groups that show specific patterns:

Names in -ar: *alpuar* (m.),²³² *ḥamar* (m.),²³³ *kuadar* (m./f.),²³⁴ *kuedar* (m.),²³⁵ *kurišar* (g.u.),²³⁶ *kurziar* (g.u.),²³⁷ *likitiar* (m.),²³⁸ *šiḥašar* (m.),²³⁹

228 This list is not meant to be exhaustive. In order to save space, I have not included references to places of attestations.

229 Laroche 1951: 116 wonders whether *lulu*, which he earlier on classified as a Lallname (*ibid.*: 103), “est aussi un mot hittite: ‘penis?’”. Semantically, this suggestion is not very attractive, however.

230 Cf. footnote 369 for a treatment of this name, where it is argued that it might have to be read *waniwani*.

231 This name is usually read *waliwali*, cf. footnote 369.

232 *al-pu-ar* (AKT 10, 32a: 2; AKT 10, 32b: 4, 10 (*al[-...]*)).

233 *ḥa-ma-ar* (AKT 10, 38b: 1; AKT 10, 40b: 1).

234 *ku-a-tár* (kt 99/k 138b [1b]: obv. 1), *ku-wa-tár* (kt n/k 32 [1b]: 5), *ku-wa-da-ar* (BIN 6, 193: 15). Note that the forms spelled with *ku-wa-* could in principle be read *ku-we-* as well, and would then be identical to *kuedar*, see the following footnote.

235 *ku-e-da-ar* (AKT 10, 61b: 4), *ku-e-ta-ar* (kt c/k 468: 17).

236 *ku-ri-ša-ar* (AKT 10, 60b: 8). Note that the envelope that corresponds to this tablet, AKT 10, 60a, has the name *ḥu-zi-ša-ar* in the place where the tablet shows *ku-ri-ša-ar*. The form *ḥu-zi-ša-ar* is undoubtedly a mistake, influenced by the preceding name *ḥu-zi-a*.

237 *ku-ur-zi-a-ar* (AKT 10, 33a: 18; AKT 10, 33b: 17, 19).

238 *li-ki-ti-a-ar* (TC 3, 191: 31).

239 *ši-ḥa-ša-ar* (kt 98/k 111: 4).

širwata[r] (m.),²⁴⁰ *taratar* (m.),²⁴¹ *titiar* (m.),²⁴² *tupawatar* (g.u.),²⁴³ *wališar* (g.u.).²⁴⁴

Names in -arna: *ašḥaḥarna* (m.),²⁴⁵ *ḥarnašarna* (m.),²⁴⁶ *zaparna* (m.).²⁴⁷

Names in -ina: *arawa(r)ḥamina* / *arawarḥumina* / *arawarhmina* / (m.),²⁴⁸ *arawa/urḥina* / *arawrhina* / (m.),²⁴⁹ *pulina* (m.),²⁵⁰ *tamapina* (m.),²⁵¹ *tilina* (m.).²⁵² Within this group, it seems likely that the names *arawa(r)ḥamina* / *arawarḥumina* and *arawa/urḥina* are related to each other. We may therefore assume that *arawa(r)ḥamina* / *arawarḥumina* represents /arawrhmina/, with a large cluster /-wrhm-/.

-
- 240 *ší-ir-wa-ta[-ar]* (kt 88/k 713 [1b]: 2). It is not fully clear to me why the editor of this text (Donbaz 1993: 145–6) has decided to add the sign AR in the gap.
- 241 *ta-ra-tar* (kt 94/k 401: 20 (courtesy Barjamovic)).
- 242 *tí-tí-ar* (kt 87/k 303: 3).
- 243 *tù-pá-wa-tár* (kt 99/k 138a [1b]: obv. 3).
- 244 *wa-li-i-ša-ar* (vat 4537 [1b]: 2). It is not fully clear to me to what extent this name should be equated with *wališra* (m.) (*wa-li-iš-ra* (AKT 10, 21a: 17; AKT 10, 21b: 2; AuOr 8, 197–205: 1; kt c/k 797: 2; kt n/k 31 [1b]: obv. 7; kt 88/k 1082: 8, 15)).
- 245 *áš-ḥa-ḥa-ar-na* (kt n/k 1854: 5).
- 246 *ḥa-ar-na-šar-na* (KKS 36a: 1; KKS 36b: 6).
- 247 *ša-pá-ar-na* (kt a/k 1263/a: 7). See footnote 292 for the possibility that this attestation should in fact be read *za-pá-ar<-áš>-na*. If so, the name *zaparna* should be stricken from our inventory.
- 248 *a-ra-wa-ar-ḥa-mi-na* (kt n/k 74: 5 (-ḥa-[mi-na]), 17), *a-ra-wa-aḥ-ḥa-mi-na* (kt n/k 74: 10), *a-ra-wa-ar-ḥu-mi-na* (AKT 10, 28a: 5; AKT 10, 28b: 5, 11). Another attestation of “Arawarhamina” is cited by OAPD for the unpublished text kt 94/k 156.
- 249 *a-ra-wu-ur-ḥ[i-na]* (TC 1, 100: 1), *a-ra-wa-ar-ḥi-na* (TC 1, 100: 13), *a-ra-wa-ar-ḥi<-na>-a* (TC 1, 100: 18).

- 252 *tí-li-na-a* (AKT 10, 19a: 4; AKT 10, 19b: 5 (-na[-a]), 7).

Names in *-iš*: *alaḥiš* (m.),²⁵³ *dakniš* / *takniš* (m.),²⁵⁴ *ḥaptuniš* (g.u.),²⁵⁵ *luapiš* (m.),²⁵⁶ *naniš* (m.),²⁵⁷ *tataiš* (m.),²⁵⁸ *tuḥupiš* (m.),²⁵⁹ *walḥiš* (m.).²⁶⁰

Names in *-kuni*: Zehnder (2010: 5–6) discusses a group of Kanišite names that all end in *-kuni*: *apikuni* (g.u.), *adamakuni* (m.), *elirakuni* (m.), *šamaraquni* (m.), *šiptikuni* (g.u.), *šura'akuni* (m.), *tunikuni* (m.), and *zura-kuni* (m.).²⁶¹ As another name in *-kuni*, Zehnder (*ibid.*) cites a *šupikuni* (f.) as well, with a first element *šupi-* that is seemingly identical to the Hittitoid element *šupi-*. Although at first sight one may therefore connect all these names to the group of Hittitoid compound names, Zehnder is hesitant in doing so. As he rightly argues, none of the other elements preceding *-kuni* are found with Hittitoid elements. We may add to Zehnder's argument that this *šupikuni* probably does not exist: OAPD rather reads this name (attested in KTH 20: 2) as *šu-pi-ma-ni*, with MA instead of KU (which is indeed the better reading; compare the shape of the sign MA in lines 9 and 11 in the same tablet). The fact that “*šupikuni*” would have been the only women's name within the group, whereas all other names in *-kuni* of which the gender reference is known refer to men, should have made us cautious to begin with.

As Zehnder rightly remarks, it is remarkable that six of the names in *-kuni* are found in a single text (TC 3, 191), and that two of these form a father-son pair (*zurakuni* and *šura'akuni*). This indicates that this group of names probably belongs to a single language, the identification of which is unclear.²⁶²

253 *a-lá-ḥi-iš* (kt k/k 14a [1b]: 4; kt k/k 14b [1b]: 3).

254 Cf. footnote 114 and 115 for attestations.

255 *ḥa-áp-tù-ni-iš* (AKT 10, 24a: 17; AKT 10, 24b: 2).

256 *lu-a-pi-iš* (kt 89/k 383: 6), *lu-a-pi-iš* (kt 89/k 367 [1b]: 38; kt 89/k 383: 16, 21).

257 *na-ni-iš* (kt 88/k 1087: 5).

258 *ta-ta-iš* (KKS 21b: 5, 21).

259 *tù-ḥu-pi-iš* (AKT 10, 46a: 6; AKT 10, 46b: 14).

260 *wa-al-hi-iš* (ICK 1, 190: 25; KTH 36: 9). Note that Ulshöfer 1995: 163 restores the attestation of KTH 36: 9 as *wa-al-[ḥ]i-ḥi-iš* / *[na]*.

261 Cf. Zehnder 2010: 5–6 for attestations. Alleged *šimišku[ni]* is better read *šimišku[nien]*, cf. § 5.2.11.

262 Thus also Laroche 1966: 310.

Names in *-nani*: *ḥamanani* (g.u.),²⁶³ *ḥamištanani* (m.),²⁶⁴ *ḥurtunani* (g.u.),²⁶⁵ *malanani* (g.u.),²⁶⁶ *muanani* (f.),²⁶⁷ *puzanani* (m.),²⁶⁸ *šalanani* (g.u.),²⁶⁹ *šanišanani* (m.),²⁷⁰ *tilinani* (g.u.),²⁷¹ *tuališanani* (g.u.),²⁷² *tuza-nani* (g.u.),²⁷³ *ušnani* / *wašnani* (/wsnani/?) (m.),²⁷⁴ *zunani* (g.u.).²⁷⁵ Since this group contains men's names as well as women's names, it is not clear whether to regard them as containing a single element. See above, section 4.4, for a discussion of Yakubovich's unconvincing proposal (2010: 210–3) to interpret some of these names as Luwic (*muanani* and *ušnani* / *wašnani*).

Names in *-pia(la)*: *anupia* (m.),²⁷⁶ *šaḥarpia* / *šiḥurpia* / *šuḥarpia* / *šuḥurpia* / *zuḥurpia* / (t)sh^wrpia/ (m.),²⁷⁷ *šipiala* (g.u.),²⁷⁸ *tutupiala* (g.u.),²⁷⁹ *ušrupia* (m.),²⁸⁰ *zuḥurpiala* (g.u.).²⁸¹ Since the names *šaḥarpia* / *šiḥurpia* / *šuḥarpia* / *šuḥurpia* / *zuḥurpia* and *zuḥurpiala* seem to be related to each other, I have treated the names in *-pia* and the ones in *-piala* as a single group here.

Names in *-ria*: *alaria* (m.),²⁸² *alkaria* (m.),²⁸³ *ḥamuria* (m.),²⁸⁴ *tamria* / *tamuria* / *tmria* / (m.),²⁸⁵ *taškuria* (g.u.),²⁸⁶ *utkaria* (m.).²⁸⁷

263 *ḥa-ma-na-ni* (Liv 8: 5).

264 *ḥa-mi-iš-ta-na-ni* (CCT 5, 9b: 8, 13, 17, 26).

265 *ḥu-ur-tù-na-ni* (AKT 5, 54: 14).

266 *ma-lá-na-ni* (kt m/k 179: 12).

267 *mu-a-na-ni* (ICK 1, 115: 9).

268 *pu-za-na-ni* (kt k/k 14a [1b]: 5).

269 *ša-lá-na-ni* (kt m/k 22: 8).

270 *ša-ni-ša-na-ni* (kt s/t 93 obv. 3).

271 *tì-li-na-ni* (MAH 19616: 11).

272 *tù-a-li-ša-na-ni* (kt s/t 93 rev. 3).

273 *tù-za-na-ni* (CCT 5, 20a: 5).

274 *uš-na-ni* (TC 3, 104: 12), *wa-áš-na-ni* (BIN 4, 40: 3; ICK 1, 71: 14; TC 2, 37: 22, 30, 32).

275 *zu-na-ni* (VAT 4536 [1b]: 23).

276 *a-nu-pí-a* (AKT 6c, 646: 5), *a-nu-pi-a* (AKT 6c, 646: 10).

277 Cf. footnotes 95, 96, 97, and 98 for attestations.

278 *ší-pi-a-lá* (kt s/t 92 [1b]: rev. 6).

279 *tù-tù-pi-a-lá* (kt v/k 147e: 3).

280 *uš-ru-pí-a* (AKT 10, 19b: 3 (note that AKT 10 reads this name as “*Du-ru-bi-a*”)).

281 Cf. footnote 354 for attestations.

282 *a-lá-ri-a* (AKT 10, 36a: 14; AKT 10, 36b: 2; ICK 1, 19a: 4; ICK 1, 19b: 26; POAT 40a: 19; POAT 40b: 3; TC 3, 253: 2).

283 *al-kà-ri-a* (ICK 2, 221: 1; ICK 4, I 513: 2, 4, 8, 10).

284 *ḥa-mu-ri-a* (ICK 1, 27b seal A; KTS 46a: 5).

285 Cf. footnote 85 for attestations.

286 *ta-áš-ku-ri-a* (CCT 1, 24a: 14).

287 *ut-kà-ri-a* (KKS 8a: 6; KKS 8b: 4, 9; TCL 1, 242: 9, 18; Kayseri 419: 2).

Names in -šna: *ḥatrašna* (m.),²⁸⁸ *puruašna* (m.),²⁸⁹ *walaḥšina* / *walḥašna* / *walḥišna* (m.) / *walhsna*,²⁹⁰ *warḥašna* (g.u.),²⁹¹ *zaparašna* (m.).²⁹²

Names in -una: *ḥazapuna* (g.u.),²⁹³ *karašuna* (m.),²⁹⁴ *šalkuna* (m.),²⁹⁵ *šarakšuna* (g.u.).²⁹⁶

Names in -unua: *ḥaptunua* (g.u.),²⁹⁷ *kanunua* (g.u.),²⁹⁸ *kapašunua* (m.),²⁹⁹ *kar(a)šunua* (m.),³⁰⁰ *karunua* (m.),³⁰¹ *punua* (m.),³⁰² *šaktunua* (m.),³⁰³ *šar(a)punua* (m.),³⁰⁴ *tuškurunua* (g.u.).³⁰⁵

Names in -upa: *ḥanupa* (m.),³⁰⁶ *tištiḥalupa* (g.u.),³⁰⁷ *ušḥupa* / *wašḥupa* / *wshupa* / (m.),³⁰⁸ *zurupa* (f.).³⁰⁹ Since this group contains men's names as well as (at least) one woman's name, it cannot be ascertained that this is a coherent group.

Names in -wašḥe:³¹⁰ *alawašḥe* (f.), *kualšawašḥe* (f.), *kušawašḥe* (f.), *lilawašḥe* (f.), *madawašḥe* (g.u.), *malawašḥe* (f.), *mali(a)wašḥe/a* (f.),

288 *ḥa-at-ra-āš-na* (AKT 10, 60a: 15; AKT 10, 60b: 2; kt c/k 857: 10).

289 *pur-wa-āš-na* (kt 88/k 1087: 3), *pu-ru-a-āš-na* (kt 89/k 367 [1b]: 11).

290 See footnotes 67 (*walḥašna*), 68 (*walaḥšina*) and 78 (*walḥišna*) for attestations.

291 *wa-ar-ḥa-aš-na* (C7 Landsberger: 14).

292 *za-pá-ra-āš-na* (AKT 1, 21: 3, 11; KTS 2, 6: 3, 11; TC 2, 66: 2 [-āš-na]); TC 3, 240: 14; VS 26, 101: 8). The attestation *za-pá-ar-na* (kt a/k 1263/a: 7) may well be a mistake for *za-pá-ar<-āš>-na*.

293 *ḥa-za-pu-na* (kt y/t 4: 13).

294 *kà-ra-šu-na* (AKT 10, 29a: 22; AKT 10, 29b: 3 (-š[u-na]); AKT 10, 43a: rev. 2 (*kà-r[a-...]*); AKT 10, 43b: 2; kt b/k 121: 14; kt c/k 1637: 2; kt 73/k 14 [1b]: 23).

302 *pu-nu-a* (AKT 1, 4: 2).

303 *ša-ak-tù-nu-a* (ICK 1, 129: 2), *ša-ak-tù-nu-wa* (KTP 44: 7; kt f/k 96 [1b]: 3, 9).

304 Cf. footnote 123 for attestations.

305 Cited by OAPD for the unpublished text kt 91/k 208.

306 *ḥa-nu-pá* (ICK 4, I 665: 4, 7).

307 Cited as "Tištiḥaluba" by OAPD for the unpublished text kt 94/k 519.

308 *uš-ḥu-pá* (KTH 28a: 3, 6, 12; KTH 28b: 5, 9, 12, 20), *wa-āš-ḥu-pá* (TC3, 253: 1; kt c/k 1639b: 26).

309 *zu-ru-pá* (kt n/k 4 [1b]: 10, 20, 32, 42).

310 There is also a name *malawašḥena* (f.).

maliniwašhe (g.u.), *mawašhe* (g.u.), *titawašhe* (f.).³¹¹ All names of which the gender is known refer to women, so it is very likely that we are dealing with a coherent group. As we have seen in section 4.4, these names have been proposed to be of a Luwic origin, but this is uncertain. Some of the initial elements found in this group occur with other second elements as well: *madamada* (g.u.), *madawada* (f.), *malawala* (g.u.).

The remaining Kanišite names do not contain obvious elements (although pairs like *idarda* – *idarzia* or *madamada* – *madawada* or *šipima* – *šipitua* could be assumed to contain the same initial element), but still are too specific to be mere Lallnamen. These names are:³¹² *anaḥluka* (g.u.), *anita* (m.),³¹³ *apiriḥ* (m.), *arka/ulia* /ark^wlia/ (m.), *atapila* (m.), *darakšu* (g.u.), *darḥašiat* (g.u.), *enišru* (m.), *ḥalitka* (m.), *ḥarkiwana* (g.u.), *ḥarpatiwa* (m.), *ḥaruašia* (g.u.), *ḥašaiškuama* (g.u.), *ḥašantarnawa* (g.u.), *ḥašarti* (g.u.), *ḥašḥaurra* (g.u.), *ḥuartula* (m.), *ḥurazi* (m.), *ḥutašama* (m.), *ḥuzura* (f.), *ḥuzuru* (m.), *idarda* (g.u.), *idarzia* (m.), *ipšudak* (g.u.), *išḥapuli* (m.), *kalazu* (m.), *kalilawitra* (g.u.), *kalilir* (m.), *kammalia* (m.), *kartinua* (g.u.), *katua* (m.), *kinuanua* (g.u.), *kunania* (f.), *kurdaša* (g.u.), *kurkazipa* (m.), *latušama* (m.), *laparša* (m.), *lišamawa* (g.u.), *luḥataḥuni* (g.u.), *madamada* (g.u.), *madawada* (f.), *malawala* (g.u.), *mamaruatia* (g.u.), *mašika* (g.u.), *mimipir* (m.), *nakiluišua* (f.),³¹⁴ *namazika* (g.u.),

311 See section 4.4 for an overview of the attestations of these names.

312 This list is not meant to be exhaustive. In order to save space, I have not included references to places of attestations.

313 According to Goetze (1954a: 358–9), this name is a thematic variant of a name in *-iat* (like *ašiat* and *na/ikiliat*, which probably are Hittitoid, cf. section 7.1), that is connected with the Hittite verb *aniye/a-zi* ‘to do, to perform’, ‘which is also the source of the [Hittite] noun *aniyatta/i-* ‘(ritual) vestments’’. It must be admitted that the spelling of this name in Hittite texts from Ḫattuša, ^m*a-ni-it-ta-*, could in principle be read ^m*a-ni-et-ta-* /*aniet:a-*/, which would make it appear to be closer to the Kanišite names that end in *-iat*, which had variants in *-iet* as well (cf. Chapter 7). However, if this were the real reading of this name, we would expect the Kanišite spelling to have been ^{**}*a-ni-e-ta*. This is not the case, however: this name is always spelled *a-ni-ta* (OIP 27, 1: obv. 1, rev. 2; OIP 27, 49a: 24; OIP 27, 49b: 27 ([*a-ḫni-ta*]; TC 3, 214a [1b]: 21; kt 89/k 371 [1b]: 26; another attestation is cited by OAPD for the unpublished text kt k/k 9 [1b]). There can therefore be no doubt that this name should be read /*anit:a*/, and has nothing to do with the Hittitoid names in *-iat* / *-iet*.

314 This name, attested in ICK 1, 123 and ICK 2, 182, is sometimes cited as *nakiluišue* (*na-ki-il₅-wi-iš-we*, e.g. Goetze 1960: 52²¹), which would make its latter part appear reminiscent of the Hittitoid element *-ašue* (f.). Moreover, the initial part *naki-* resembles the Hittitoid element *naki-*. Nevertheless, it is difficult to interpret this name as Hittitoid: the internal part *-lui-* would then be unclear, and the formal difference between *-išue* and *-ašue* would be unexplained. Moreover, there is no good reason to read the last sign of this name as *-we* instead of *-wa* (thus also Zehnder 2010: 229). It is therefore better to regard *nakiluišua* as a non-Hittitoid name.

paḥulu (m.), *palḥazia* / *palḥuša* (f.), *palui* (m.), *paritia* (g.u.), *paruawata* (g.u.), *pikula* (g.u.), *piliuma* (g.u.), *piluatišu* (m.), *pithana* (m.), *pului* (m.), *puluta* (m.), *punamuati* (f.), *purama* (g.u.), *purka* (f.), *puza* (f.), *puzazu* (m.), *puzuma* (m.), *šaḥarli* (f.), *šaḥišḥalaka* (g.u.), *šailati* (m.), *šalkuata* (m.), *šaluata* (/ *šaliata*) (m.),³¹⁵ *šanaḥurna* (m.), *šariḥu* (m.), *šawalia* (g.u.), *šawalku* (g.u.), *šawana* (m.), *šilumata* (g.u.), *šiliara* (m.), *šimašitiša* (f.), *ši(m)zur* / *ši(n)zur* (m.), *šipana* (m.), *šipima* (m.), *šipitua* (m.), *šišara* (g.u.), *šizuška* (m.), *šuluat* (m.), *šulupua* (m.), *šumiawa* (m.), *taparlu* (m.), *taḥani* (m.), *talḥata* (m.), *taltul* (g.u.), *taluhṭa* (g.u.), *taluka* (f.), *tamnia* (g.u.), *tarḥunia* (g.u.), *tarḥunu* (m.), *tarḥuṣit* (m.), *tarmalia* (m.), *tarmana* (m.), *tarmua* (g.u.), *tatka/ipu* (g.u.), *tatma* (m.), *tazkul(i)* (m.), *tiripa* (g.u.), *titimi* (f.), *titumian* (f.), *tiwaliz* (g.u.), *tuḥnada* (m.), *tuḥuṣili* (g.u.), *tuḥuṣipḥa* (m.), *tulinua* (m.), *tumana* (m.), *tunumna* (m.), *tunumnazu* (g.u.), *tupakili* (g.u.), *turupani* (m.), *tušua* (m.), *tušula* (g.u.), *tuthalia* / *tuthilia* / *tuthlia* / (m.), *tutuli* (m.), *uršiša* (f.), *uṣḥalia* (g.u.), *utkarišan* (m.), *uwašada* (g.u.), *wališra* (m.), *walkua* (m.), *wanuzal* (f.), *warašma* / *waršama* / *waršuma* / *warsma* / (m.), *warḥila* (g.u.), *warḥunu* (g.u.), *warika* (g.u.), *warkitila* (m.), *wašatapra* (m.), *wašḥimam* (g.u.), *wašḥuani* (g.u.), *wiškua* (m.), *zapikuti* (g.u.).

4.8 Conclusions: Kanišite Hittite

From the preceding discussions it may be clear that many of the Kanišite personal names defy a linguistic analysis, but that among the names that can be more or less securely assigned to a specific language, only a handful seem to have a Luwic, Hattic or Hurrian background, whereas the great majority can be identified as Hittitoid in character. The remainder of this book (Parts II and III) will therefore be devoted to presenting a full overview of all Hittitoid names from Kaniš, which from now on I will call ‘Kanišite Hittite’. Moreover, it will be discussed what the exact linguistic relationship is between the Hittite language as portrayed in these Kanišite names and the Hittite language that is known from the Hittite texts found in Ḫattuša, and how this would fit the historical ties between the cities Kaniš and Ḫattuša.

315 According to Goetze (1954a: 358–9), *šaliata* is the thematic version of a name in *-iat* (like *ašiat* and *na/ikiliat*, which probably are Hittitoid, cf. section 7.1), which is to be connected with the Hittite verb *šallije/a-zi* ‘to become great’. However, none of the other names in *-iat* ever shows a thematic version in *-iata*. Moreover, *šaliata* (attested on the tablet of BIN 4, 209) alternates with *šaluata* (as attested on the corresponding envelope), a name that is attested more often (ICK 1, 35; TC 1, 99). It therefore is questionable whether the name *šaliata* really existed as such, and, even if it did, I do not see a good reason to interpret it as Hittitoid. See Zehnder 2010: 10 for a discussion of the gender of this name.

PART 2

***Kanišite Hittite Personal Names:
the Material***

∴

Kanišite Hittite Compound Names

In this chapter and the following one, an overview will be provided of all personal names attested in the Old Assyrian texts from Kaniš that have a Hittitoid character, and which from now on will be called Kanišite Hittite. These names fall into two groups, namely a group of compound names (the bulk of the material), and a group of other names. In the present chapter, the compound names will be discussed, whereas the other Kanišite Hittite names are treated in Chapter 6.

As was stated above, on the basis of the recognition that women's names ending in *-ḫšušar* form the feminine counterpart to men's names in *-ḫšu* (*ḫapiaḫšušar* (f.) vs. *ḫapiaḫšu* (m.), *ḫištahšušar* (f.) vs. *ḫištahšu* (m.), etc.), it could be deduced that *-šar* is a feminizing element. On the basis of an equation between Kanišite *-šar* and the Hittite and Luwian feminizing suffixes *-š(ša)r(a)-*, which are of an Indo-European origin, it can be convincingly argued that the Kanišite personal names ending in *-ḫšu* and *-ḫšušar* have an Anatolian (in the Indo-European sense of the word) background. This is supported by the fact that often the elements *-ḫšu* and *-ḫšušar* are placed after elements that resemble Anatolian, and, more specifically, Hittite lexemes, like *apizia-ḫšu* ~ Hitt. *appezzi(ia)-* 'backmost, last', *niwa-ḫšu(šar)* ~ Hitt. *neṽa-* 'new'. Moreover, some of the initial elements of names ending in *-ḫšu(šar)* are found in front of other elements that resemble specifically Hittite lexemes and suffixes as well, like *-nika* (f.) ~ Hitt. *neka-* 'sister', or *-uman / -umen* (m.) ~ Hitt. *-umen- / -umn-* (suffix of appurtenance). It can therefore be concluded that we are dealing here with compound names that probably belong to a language of an Indo-European, Anatolian character that resembles Hittite the most, which we could therefore call 'Hittitoid'.

If one makes an inventory of the different elements that occur as the first member in compound names of which *-ḫšu(šar)*, *-nika*, and *-uman / -umen* are the second member, it turns out that these elements combine with other elements as well, namely *-ala* (m./f.), *-ali* (m.), *-an* (m./f.), *-ašu* (m.), *-ašue* (f.), *-kunian / -kunien* (f.), *-lka* (f.), and *-mei* (m.). I therefore regard all these elements as possibly Hittitoid.

5.1 The Linking *-a-*

If we compare the names *šupiaḥšu* (m.), *šupianika* (f.), and *šupiuman* (m.) to each other, it seems at first sight attractive to assume that they consist of an element *šupi-* to which the elements *-aḥšu*, *-anika*, and *-uman* have been attached. Likewise if we compare the three names *šamnaḥšu* (m.), *šamnanika* (f.), and *šamnuman* (m.): these seem to consist of an element *šamn-*, to which the same three elements, *-aḥšu*, *-anika*, and *-uman*, have been attached. However, if we compare the two names *ḥašušar* (f.) and *ḥašušarnika* (f.) to each other, we rather have to analyse the latter as consisting of an element *ḥašušar-* and an element *-nika*.

The question now is: to what extent is the element *-nika* as attested in *ḥašušar-nika* related to the element *-anika* that we find in *šupi-anika* and *šamn-anika*? Since both elements are used to form women's names, it is likely that they are related, but what to think of the *-a-* that is present in *-anika*, but is absent in *-nika*?

A part of the solution lies in the behaviour of the element *-uman*, which, as we have seen in § 4.3.2 (see also § 5.2.13), is generally equated with the Hittite suffix of appurtenance *-umen-* / *-umn-*. In Hittite, this suffix has the interesting characteristic that, when used to derive an adjective from an *a*-stem noun, the suffix *-a-* of that noun is deleted: cf. ^{URU}*nēša*- 'Kaniš' → *neš-umen-* 'inhabitant of Kaniš'; *aruna*- 'sea' → *arun-umen-* 'sea-dwelling'; etc. With this in mind, we may analyse the names *šupiuman* and *šamnuman* as being derived from the initial members *šupia-* and *šamna-*. This gives way to analysing the other names as mentioned above as *šupia-ḥšu*, *šupia-nika*, *šamna-ḥšu* and *šamna-nika*, respectively, with the initial elements *šupia-* and *šamna-*, and the final elements *-ḥšu* and *-nika*, the latter being identical to the element *-nika* as found in *ḥašušar-nika*. Also for the element *-ḥšu* this makes sense, since this can now be equated with Hitt. *ḥaššu*- 'king' and Hluw. *hasu-* 'offspring', pointing to an original meaning 'descendant, born' (see § 4.3, above, and § 5.2.6, below). Moreover, we can now connect the element *-ḥšušar* to the initial element *ḥašušar-* of *ḥašušar-nika* (cf. § 5.3.39 below).

However, the analysis of *šupiaḥšu* and *šupianika* as *šupia-ḥšu* and *šupia-nika* causes difficulties as well. The first element of these names is often equated with the Hittite adjective *šuppi-* 'pure, clean',³¹⁶ the stem of which ends in *-i-*, not in *-ija-*. The dilemma therefore is: should we analyse *šupia-ḥšu* and *šupia-nika*, giving up a connection with Hitt. *šuppi-* 'pure'; or should we analyse

³¹⁶ Cf. its treatment in § 5.3.136 for references.

šupi-aḥšu and *šupi-anika*, giving up the connection with Hitt. *ḥaššu*- ‘king’ / HLuw. *hasu*- ‘offspring’ and Hitt. *neka*- ‘sister’?

In my view, the answer to this dilemma lies in a combination of both analyses. I propose that we should analyse these names as *šupi-a-ḥšu* and *šupi-anika*, with a ‘linking -a-’ between the element *šupi*-, on the one hand, and the elements *-ḥšu* and *-nika*, on the other. The assumption of such a linking -a- would not only elucidate these two names, but may also give insight into the analysis of others. For instance, if we compare the names *kikaršan* /*kikarsn*/ and *kikarašnaḥšu* /*kikarsnahsu*/ to each other,³¹⁷ it is clear that the latter seems to be derived from the former. However, if we want to maintain *-ḥšu* as a separate element, the only way to analyse *kikarašnaḥšu* is as /*kikarsn-a-hsu*/, again with a linking -a- between the elements /*kikarsn*-/ and /-*hsu*/.

The presence of linking elements between two members of a compound is a typologically common phenomenon (cf. Bauer 2009: 346). With regard to the origin of -a- as a linking element, we may follow Zehnder who states that “[d]as unerwartete mittlere *a* von ⁽ⁿ⁾*Šupianika* [...] kann analogisch eingeführt sein, nämlich [...] nach den vielen Fällen, wo *-nika* an ein thematisches Vorderglied tritt” (2010: 88).³¹⁸ This amounts to saying that the *-o- of original *-o-stem nouns (= Hitt. *a*-stems) has spread as an enlarger of the first members of compounds, just like it did in other Indo-European languages, cf. Gr. original *μελάγ-χροος* ‘dark-skinned’ < **melh₂n-g^hrou-o-*, which is replaced by younger *μελαν-ό-χροος* < virtual **melh₂n-o-g^hrou-o-*.³¹⁹

In the treatments of the Kanišite Hittite compound names that follow it is therefore important to take into account the possibility that an -a- that is present between the first and second member of a name may be a linking -a-.

5.2 The Final Elements of the Kanišite Hittite Compound Names

In the following sections, I will treat all elements that occur in final position in the Kanišite Hittite compound names.

317 Cf. § 5.3.70, with footnotes 713 and 714, for a more detailed analysis of these names and for an overview of their attestations.

318 Zehnder also suggests that the -a- may be analogical “nach Namen, deren Zweitbestandteil mit *a* anlautet, z. B. kapp. [...] ⁽ⁿ⁾*Šupiašwe* [...], ^(m)*Ḥapuala*”. This seems less likely to me.

319 Brugmann 1904: 305. This usage of -o- has become so productive that in Modern Greek, “[t]he structure of most compounds contains a vowel -o- between the first and the second member”, which synchronically is to be regarded as a mere “linking vowel” (Galéas 2002: 150–1).

5.2.1 *-ala* (m./f.)

A Hittitoid element *-ala* can be determined on the basis of several names in which it is combined with a first element that is used with other Hittitoid final elements as well: *ḫapuala* (m.), *kulanala* (m.), *niwala* (g.u.), *piruala* (m.), *šimnala* (f.), *šiwanala* (g.u.), and *uštala* (m.). Cf. the treatment of the initial elements of these names in section 5.3 for their attestations and possible meanings.

Interestingly, *-ala* is found in both men's and women's names, a situation that is not found with many other Hittitoid final elements. We will see below that this gender fluidity may be etymologically explained, however.

Some of the initial elements with which *-ala* combines seem to be genuine *a*-stem nouns (*niwa-*, *pirua-*, cf. their respective treatments), whereas in the other names the *-a-* could in principle be a linking *-a-*: *ḫapu-ala* or *ḫapu-a-la*; *kulan-ala* or *kulan-a-la*; etc. If this latter analysis is correct, the final element of all these names would not be *-ala*, but rather *-la*. This idea could be further supported by the presence of the names *ašula* (g.u.), *marila* (m.), *šumila* (m.) and *tipula* (m.), which could in principle contain the initial elements *ašu-*, *mari-*, *šumi-* and *tipu-* (cf. their respective treatments below in section 5.3) and a final element *-la*. This may also go for the triplet *tarḫala* / *tarḫula* / *tarḫuala* (m.), of which it has been discussed in § 3.2.7 that these names, if they can be equated with each other, seem to point to an underlying shape /tarh^wla/ or /trh^wla/,³²⁰ with a final element *-la* instead of *-ala*.

However, from an etymological point of view, an analysis as *-ala* is more attractive than *-la*, since in Hattuša Hittite a suffix *-ala-* is present,³²¹ whereas a suffix *-la-* does not exist. The suffix *-ala-* (which in younger Hittite shows the variant *-alla-*)³²² forms nouns (usually agent nouns) that can be derived from: verbal stems (e.g. ^{LÚ}*arnuḫala-* (c.) 'deportee', derived from *arnu-*^{zi} 'to deport'; ^{LÚ}*tarḫešgala-* (c.) 'dancer', derived from *tarḫeške/a-*^{zi} 'to be dancing'); from substantives (e.g. ^{LÚ}*auriḫala-* (c.) 'guard', derived from *auri-* 'watchtower'; ^{LÚ}*išpantuzziḫala-* (c.) 'libation-bearer', derived from *išpantuzzi-* 'libation vessel'); as well as from adjectives (e.g. ^{LÚ}*paššandala-* (c.) 'taster(?)', derived from *paššant-* 'sipping').³²³ This would perfectly fit a morpheme that is used as a final element in personal names. Moreover, Hittite nouns in *-ala-* can have both male referents (e.g. ^{LÚ}*laḫḫiḫala-* 'warrior', derived from *laḫḫiḫe/a-*^{zi} 'to go on a military campaign') and female referents (e.g. ^{MUNUS}*ḫaḫḫallalla-* 'a female functionary', derived from *ḫaḫḫall-* 'vegetation'), a quality that fits the fact that the Kanišite names in *-ala* refer both to men (*ḫapuala*, *kulanala*, *niwala*,

³²⁰ Cf. § 5.3.147 for this latter option.

³²¹ Cf. also Zehnder 2010: 94–5 for an equation between Kanišite *-ala* and Hitt. *-ala-*.

³²² Cf. Oettinger 1986: 45.

³²³ Cf. Melchert 2014: 209.

piruala, etc.) and to women (*šimnala*). I therefore regard an equation between Kanišite *-ala* and the Hitt. suffix *-ala-* as attractive. This does mean, however, that the names *ašula*, *marila*, *šumila*, *tipula*, and *tarhala* / *tarhula* / *tarhuala* = /tarh^wla/ do not belong to this group. Below, in § 5.2.9, they will therefore be treated as forming their own class.

An element *-ala* does not only occur in the names mentioned above, but also in a set of other names attested in the Old Assyrian texts from Kaniš. However, since in these names the element *-ala* is attached to elements that do not occur in combination with any of the other Hittitoid elements, I regard the identification of these names as Hittitoid as far less secure. These names are: *adala* (m.),³²⁴ *anizala* (g.u.),³²⁵ *anušala* (m.),³²⁶ *arala* (f.),³²⁷ *awiala* (f.),³²⁸ *hamala* (m.),³²⁹ *haršala* (g.u.),³³⁰ *hatala* / *hutala* / *huatala* = /h^wta/ (f.),³³¹ *hazuala* (g.u.),³³² *hurdala* (g.u.),³³³ *huzala* (m.),³³⁴ *kalala* (m.),³³⁵ *katutala* (g.u.),³³⁶

324 *a-da-lá* (kt 88/k 1082: 6, 12; kt 88/k 1087: 2 (note that aATU reads this form as “*A-kal-lim*”, whereas Jan Gerrit Dercksen rather reads *a-da-lá*, undoubtedly because this person is mentioned as the father of *tamuria*, who in kt 88/k 1082 is securely attested as the son of *adala*)). Since the name is spelled with the sign DA, it seems to contain a /d/, which separates it from the element *ata-* (with /t/), that occurs in e.g. *ataḫšu*, etc. (cf. below, § 5.3.23).

325 *a-ni-za-lá* (CCT 1, 45: 2, 5, 20, 22).

326 *a-nu-ša-lá* (kt 01/k 247a [1b] (Günbattı 2014, nr. 6): 14 ([...] *-ša-lá*); kt 01/k 247b [1b] (Günbattı 2014, nr. 7): 8; kt 03/k 257a [1b] (Günbattı 2014, nr. 2): 20; kt 03/k 257b (Günbattı 2014, nr. 3): 15), *wa-nu-ša-lá* (kt 01/k 294 [1b] (Günbattı 2014, nr. 1): 13). Since both the names *anušala* and *wanušala* refer to the GAL *simmlitum* of king *paḫanu*, there can be no doubt that they are identical. Since *wanušala* occurs only once, after the conjunction *ù* ‘and’, we may think of a sort of sandhi-phenomenon: *u anušala* was pronounced [u^wanusala], spelled *ù-wa-nu-ša-lá*.

327 *a-ra-lá* (ICK 1, 46a + ICK 2, 77 + KKS 45b: left edge 2; ICK 2, 77: 1; kt m/k 1: 37; kt m/k 69b: 28; kt m/k 70: 19).

328 *a-wi-a-lá* (kt j/k 625 [1b]: 10). This transliteration is given by e.g. OAPD and aATU, although *a-wa-a-lá* and *a-wu-a-lá* are in principle possible as well.

329 *ha-ma-lá* (kt 01/k 325a [1b]: 10, 13, 16, 22 ([...] *-m*] *a-lá*); kt 01/k 325b [1b]: 1, 12, 13, 16, 19, 28, 51, 54).

330 *ha-ar-ša-lá* (kt 91/k 202).

331 Cf. footnotes 89, 90, 91, and 92 for overviews of attestations.

332 *ha-zu-a-lá* (AKT 6a, 1: 13, 41 (*ha-*)). The initial element of this name, *hazu-*, may be identical to the initial part of the toponym *hazušara*, which in footnote 1041 will be equated with the place name ^{URU}*hanzušra* as attested in Hittite texts from Ḫattuša. Moreover, this ^{URU}*hanzušra* was analysed as reflecting **h₂msusró-*, a derivative of the noun **h₂émsu-sr* ‘female descendant > queen’. If correct, *hazuala* would represent /hantsu-ala/ ‘the descendant one’.

333 *hu-ur-da-lá* (kt m/k 102: 22).

334 *hu-za-lá* (AKT 2, 4: 4; AKT 2, 26: 6; AKT 2, 49: 2, 5, 16; kt n/k 175: 15). Another attestation of “Huzala” is cited by OAPD for the unpublished text kt n/k 1090.

335 *kà-lá-lá* (kt 87/k 285: 2).

336 *kà-du-ta-lá* (AKT 6a, 14: 3, 5, 13, 19).

kurmala (g.u.),³³⁷ *madala* (g.u.),³³⁸ *malawala* (g.u.),³³⁹ *marušala* (g.u.),³⁴⁰ *mašala* (g.u.),³⁴¹ *ninala* (g.u.),³⁴² *papala* (m.),³⁴³ *šulala* (g.u.),³⁴⁴ *tarkuala* (g.u.),³⁴⁵ *taruašiala* (g.u.),³⁴⁶ *tutupiala* (g.u.),³⁴⁷ *urdala* (m.),³⁴⁸ *walawala* (f.),³⁴⁹ *walwala* (g.u.),³⁵⁰ *wanušala* (m.),³⁵¹ *warpišala* (g.u.),³⁵² *zapala* (g.u.),³⁵³ *zuḥurpiala* (g.u.).³⁵⁴

337 *ku-ur-ma-lá* (AKT 10, 33a: 4; AKT 10, 33b: 3, 6). Note that Günbatti 2016 (= AKT 10): 76–78 reads these attestations as *ku-ur-ma-mi*.

338 *ma-da-lá-a* (OIP 27, 30: 17).

339 *ma-lá-wa-lá* (kt g/t 36 [1b]: 18), but cf. section 4.7.

340 *ma-ru-ša-lá* (AKT 6b, 444: 18).

341 *ma-ša-lá* (kt 89/k 294: 18).

342 *ni-na-lá* (CCT 5, 41b: 22). Two other attestations of “Ninala” are cited by OAPD for the unpublished texts kt 94/k 286 and kt 94/k 514. Gojko Barjamovic (p.c.) informs me that kt 94/k 286 in fact reads *ni-na-li*, however, both on the letter and the envelope, whereas kt 94/k 514 twice contains *ni-na-lá*. Moreover, according to him (p.c.) both letters refer to the same individual. I do not know how this should be interpreted.

343 *pá-pá-lá* (AKT 3, 21: 10; AKT 4, 47: 1; AKT 10, 44a: 2; AKT 10, 44b: 4, 5; CCT 1, 23: 33; CCT 5, 9b: 1, 3, 11; ICK 4, 1 527: 2; TC 1, 68: 4, 7; TC 2, 53: rev. 4, 6, 23 ([*pá-p*]-*á*); TC 3, 50: 6; kt m/k 3: 7, 10; kt m/k 24: 2 (*-p[á-lá]*), 8; kt m/k 35: 8 ([*p*]-*á*), 49; kt 94/k 762: 14), *pá-pá-lá-a* (Chantre 2: 18; kt 99/k 139 [1b]: 3). Note that some of the individuals called *papala* have relatives with Assyrian names (e.g. *papala*, son of *aššur-ṭāb* in AKT 3, 21 and kt 94/k 762), whereas others have Anatolian relatives (e.g. *papala* son of *pirua* and husband of *palḫazia* in TC 1, 68; or *papala*, son of *tamuria* and brother of *mukulu* in kt 99/k 139).

344 *šu-lá-lá* (kt n/k 67: 23, 67, 68).

345 *ta-ar-ku-a-lá* (kt 89/k 294: 16). Formally, we may assume a connection with the Ḫattuša Hittite verb *tar(k)u-zi* ‘to dance’, which would imply that *tarkuala* must be analysed as /tark^wala/ (or /trk^wala/) and had the meaning ‘dancer’ (cf. the Hitt. noun *tarqešgala* ‘dancer’, derived from the imperfective stem *tarqe/iške/a-zi* that belongs to *tar(k)u-zi*).

346 *ta-ar-wa-ší-a-la* (kt b/k 21: 2 (*-la'*), 7, 20).

347 *tù-tù-pi-a-lá* (AKT 10, 17a: 7; AKT 10, 17b: 15, 18 (*t[ù-...]-lá*); TC 1, 87: 11; kt a/k 335: 11 (*tù[-...]*) (forms envelope to kt a/k 931); kt a/k 931: 1; kt f/k 60 (*tù-tù-p[í-a-lá]*), kt v/k 147e: 3), *tù-tù-pí-a-lá* (AKT 10, 17a: 15). Cf. section 4.7, however, for the possibility that this name is non-Hittitoid.

348 *ur-da-lá* (AnOr 6, 20: 7; BIN 6, 132: rev. 2), *ur-da-la* (CCT 5, 41a: 12).

349 *wa-la-wa-la* (ICK 1, 19a: 8, 15, 18, 23; ICK 1, 19b: 3), *wa-lá-wa-lá* (AAA 1, 13a: 2; ICK 1, 32: 1 ([*wa-lá-lá*]), 6 (*-[lá-w]*)-*a*); ICK 1, 19b: 11, 15, 20; OIP 27, 59: 24, 30; kt n/k 1716a: 1, 6; kt n/k 1716b: 3). Because of the clear reduplicative character of this name (*wala-wala*), it is unlikely that it should be analysed as containing an element *-ala*. Nevertheless, for the sake of completeness it is cited here.

350 *wa-al-wa-lá* (kt c/k 201: 3).

351 See the treatment of *anušala*, cf. footnote 326.

352 *wa-ar-pi-ša-lá* (kt o/k 277: 18 (cf. Günbatti 2014: 108)). According to Günbatti (*l.c.*), *warpišala* is a variant of *warpišali*, for which see the next section and footnote 370.

353 *za-pá-lá* (kt g/t 36 [1b]: 11).

354 *zu-ḫu-ur-pi-a-lá* (AKT 8, 294: 2; CCT 5, 34b: 8). Cf. section 4.7 for the possibility that this name is non-Hittitoid, however.

5.2.2 -*ali* (m.)

The existence of a Hittitoid element -*ali* is suggested by the names *atali* (m.), *ḥaštali* (m.) and *piruali* (g.u.), since their initial elements occur with other Hittitoid elements as well.³⁵⁵ Finding a good Hittitoid interpretation of this element is not easy though. I see two possibilities.

The first possibility takes as a starting point the possible equation of the Kanišite name *atali* with the Ḫattuša Hittite men's name ^m*attalli*,³⁵⁶ which would mean that -*ali* in fact contains a geminate /-l-/, /-al:i/. It would then be identical in shape to the nominal suffix -*alli*- that in Hittite is used to form nouns from nouns,³⁵⁷ both of common gender (e.g. ^{LÚ}*ḥimmalli*- (c.) 'imitator', derived from *ḥimma*- 'imitation'; *piḫantalli*- (c.) 'donated bread', derived from *piḫant*- 'given') and of neuter gender (e.g. *ḥaršanalli*- (n.) 'crown', derived from *ḥaršar* / *ḥaršan*- 'head'; *zeriḫalli*- (n.) 'cup-holder', derived from *zēri*- 'cup'). Such a denominalizing suffix would semantically be a good match to an element that is used as the second member of compound names. However, in recent years it has been argued that -*alli*- is not a genuine Hittite suffix, but rather the result of a modification of an original Hittite suffix -*āla*- under influence of its Luwian counterpart -*alla*/i-,³⁵⁸ having taken over both its geminate -*ll*- (which, to be sure, cannot be seen in the Kanišite forms) as well as the *i*-mutation suffix -*i*-. If Kanišite -*ali* would be identical to Hitt. -*alli*-, this would mean that Luwianization of this suffix had taken place already early on. This does not seem credible to me. In fact, I wonder whether the idea that all examples of Hitt. -*alli*- must have arisen under the influence of Luwian can be upheld in this way. It is true that there are clear examples where a Hittite form in -*alli*- is the result of Luwian influence, for instance in ^{LÚ}*ḥaršijalli*- (c.) 'bread-server', which exists next to ^{LÚ}*ḥaršijala*- (c.) 'id.'. However, there are forms in -*alli*- that occur already in Old Hittite manuscripts (e.g. ^{NINDA}*pí-ia-an-ta-al-li-iš* (KBo 17.29 iv 3 (OS), KUB 35.126 obv.² 2 (broken) (OS))), which look archaic to me. Moreover, the assumption that the -*i*- of -*alli*- is in fact the *i*-mutation suffix -*i*- of Luwian

355 For attestations and interpretations of these names, cf. the treatments of their initial elements below, in section 5.3.

356 The name of a Hittite tax collector in Ugarit, spelled ^m*at-ta-al-li(-iš)* (RS 17.109, 1, 10, 13, 18), cf. Laroche 1966: 47.

357 Cf. Hoffner & Melchert 2008: 55.

358 Going back to Melchert 2005: 455–6, cf. also Hoffner & Melchert 2008: 62.

is impossible for neuter nouns in *-alli-*, since the Luwian *i*-mutation suffix only occurs in common gender nouns.³⁵⁹ I am therefore inclined to believe that Hittite did have an original core of nouns (both common and neuter gender) that contained the suffix *-alli-*. If this is correct, it would be possible to equate the Kanišite element *-ali* with this suffix.

A second possible interpretation of *-ali* is the following. The Kanišite name *ḫaštali* is reminiscent of the stem *ḫaštali-* that can be found in the Ḫattuša Hittite words *ḫaštaliḫatar* (n.) ‘bravery’ and *ḫaštaliēšš-^{zi}* ‘to become brave’.³⁶⁰ On the basis of these derivatives, the Hittite stem *ḫaštali-* can be determined as denoting ‘brave’, which would be an excellent meaning for a personal name as well. Hitt. *ḫaštali-* can be analysed as *ḫašt-ali-*, in which *ḫašt-* is the root of the word *ḫaštai- / ḫašti-* ‘bone’,³⁶¹ and *-ali-* may be a suffix that forms adjectives as present in Hitt. *pattīali-* (adj.) ‘swift’ (derived from *paddai-ⁱ / patti-* ‘to run, to flee’), *puntariḫali-* (adj.) ‘stubborn(?)’ (derived from *puntariḫe/a-^{zi}* ‘to be stubborn(?)’), and possibly *šūnali-* (adj.)³⁶² ‘divine(?)’ (derived from *šūn(a)-* ‘deity’). Also this function would nicely fit a morpheme that is used as the second element in personal names. It must be admitted, however, that the number of adjectives in Ḫattuša Hittite containing *-ali-* is very low.

All in all, we may conclude that the identification of the Kanišite element *-ali* as Hittitoid does give possibilities for a connection with Ḫattuša Hittite morphemes (either with the nominalizing suffix *-alli-* or with the adjectivizing suffix *-ali-*), but that these connections are not unproblematic.

Apart from the three names cited above, there are other personal names attested in the Old Assyrian texts that end in *-ali*. However, since their initial parts do not occur with other Hittitoid elements, their identification as Hittitoid cannot be ascertained. In fact, we have seen above, in section 4.6, that some of these may be identified as Hattic, specifically because they end in *-li*. These other names ending in *-ali* are: *ḫa²malimali* (g.u.),³⁶³ *ḫapatali* (m.),³⁶⁴

359 Melchert’s statement that this “suggests in fact that in Old Hittite the complex Luwian pattern of “*i*-mutation” was lost in the borrowing process” (2005: 456) is not credible.

360 Cf. Kloekhorst 2014: 148 with footnote 561.

361 Which more often forms derivatives with a meaning ‘brave’, e.g. *ḫaštili(ia)-* ‘brave, heroic’.

362 If the stem of this adjective is not *šūnala-* instead, cf. Kloekhorst 2008: 764.

363 [*ḫ*]a²-ma-li-ma-li (kt r/k 17 [1b]).

364 *ḫa-pá-ta-li* (TCL 1, 240: 1, 6, 7, 15, 19, 21). See section 4.6 for the possible equation of this name with the divine name *^dḫapantali(ia)-* (cf. Van Gessel 1998: 90–1), which could point to a Hattic origin of this name.

kulali (f.),³⁶⁵ *tatali* (m.?),³⁶⁶ *tatuḫali* (g.u.),³⁶⁷ *turmali* (g.u.),³⁶⁸ *waliwali* (?) (f.),³⁶⁹ *warpišali* (g.u.),³⁷⁰ *wawali* (m.),³⁷¹ and *zapali* (m.).³⁷²

5.2.3 -an (m./f.)

The existence of a Hittitoid element *-an* is suggested by the names *ašuan* (m.), *šarnikan* (m.) and *tarḫuan* (m.), since their initial elements occur with other Hittitoid elements as well.

The interpretation of this element is relatively complicated, since within the corpus of Kanišite personal names we seem to encounter two different types of names ending in *-an*.

The first type is represented by the name *kulšan* (f.). As we have seen above as well (§ 3.2.11 and § 4.2.3), this name occurs in ICK 1, 16b as *ku-ul-ša-an*, but on the corresponding envelope ICK 1, 16a as *ku-ul-ša-ta-áš*. Already

365 *ku-lá-li* (AKT 10, 32a: 6; AKT 10, 32b: 8, 14). The fact that this is a women's name may indicate that it is not related to the other names in *-ali*.

366 *ta-ta-li* (ICK 1, 83: 27), *ta-ta-li-i* (AAA 1, 8: 1, 5).

367 Cited as "Tatuhali" by OAPD for the unpublished text kt 94/k 282.

368 *tur₄-ma-li* (AKT 10, 50a: 2; AKT 10, 63a: 8; kt 89/k 383a [1b]: 4; kt 89/k 383b [1b] (Günbatti 2014, nr. 13): 30), *tù-ur-ma-li* (AKT 10, 9a: 4; AKT 10, 9b: 2, 8), *tù-ur-ma-li-i* (kt m/k 170: 3, 9).

369 *wa-lí-wa-lí* (ICK 1, 46a + ICK 2, 77 + KKS 45b: left side 1; ICK 2, 76: 7, 12; ICK 4, I 675: 2 (-wa[-lí]); KTS 1, 3a: 17, 19; RA 60, 130: 17 (*wa-[lí]-[w]a-[lí]*); kt 89/k 371 [1b]: 16), *wa-li-wa-li* (OIP 27, 7: 18 (*wa-li-w[a²...*]); kt 89/k 371 [1b]: 31 (*wa-[lí-...]*)). Larsen (2014 (= AKT 6c): 247–8) cites a "Wa-li-wa-li" in a piece of text that is unclear regarding its meaning; it therefore cannot be ascertained that we are dealing with a personal name. Note the remarkable fact that the bulk of these attestations are spelled with *lí*, i.e. the sign N1. The two attestations that are reportedly spelled with the sign LI (OIP 27, 7: 18 and kt 89/k 371 [1b]: 31) are both broken. Moreover, of the former form (*wa-li-w[a²...*] on OIP 27, 7: 18) no independent evidence seems to exist for the reading of this name as *waliwali* (as read by Gelb 1935: 28). And the latter form (*wa-[lí-...]* on kt 89/k 371 [1b]: 31) stands besides a spelling *wa-lí-wa-lí* (*ibid.*: 16), so I wonder to what extent the transliteration *wa-[lí-...]* with the sign LI (thus Donbaz 1993: 139) is correct (note that on the photo of this tablet as provided in Donbaz 1993 the piece on which *wa-[lí-...]* should be present is not visible, so that the reading of the second sign as *[lí]* cannot be verified). I therefore am inclined to think that the attestations "wa-lí-wa-lí" (thus e.g. Hecker aATU and CDLI) are rather to be read as *wa-ni-wa-ni*. If this is correct, this name has nothing to do with the Hittitoid names ending in *-ali*.

370 *wa-ar-pi-ša-li* (Günbatti 2014, nr. 1: 21, 36). According to Günbatti 2014: 108, *warpišali* is a "compound of the Hittite words *warp-* 'to wash'" and *šalli* "big". This suggestion is nothing more than a guess, however, and does not take into account the morphological structure of the other Kanišite names in *-ali*.

371 *wa-wa-li* (Adana 237 A: 22 ([*wa-w*]a-), 27; CCT 3, 49b: 26; ICK 4, I 768: 15 ([*wa-*]wa-li); KTH 36: 38; KTS 1, 7a: 16, 23; RA 80 – TTC 5: 8; TC 3, 3: 9; VS 26, 121: rev. 8; kt 91/k 169: 13; kt 91/k 492: 8; kt 94/k 128: 23).

372 *za-pá-li* (kt n/k 73: 5).

Bilgiç (1945–1951: 4) therefore concluded that *kulšan* can be interpreted “als Wiedergabe eines *-ant”, with *kulšataš* representing a form in /-antas/ (with genitive ending, cf. § 4.2.3). Although the status of *kulšan* as a Hittitoid name is unclear,³⁷³ the interpretation of its latter part as *-ant-* is attractive for some assuredly Hittitoid names in *-an* as well, because these show variants in *-at:* *ašuan* besides *ašuat*;³⁷⁴ and *šarnikan* besides *šarnikat*.³⁷⁵ Moreover, an element *-an(t)* can be convincingly equated with the Hittite suffix *-ant-*, which occurs as marker of participles, and has an individualizing function in adjectives and nouns (Hoffner & Melchert 2008: 55–6). Furthermore, as Laroche (1966: 314) observes, several of the Kanišite names in *-an(t)* have a clear counterpart in Hittite lexemes ending in *-ant-*: *ašuan* / *ašuat* ~ Hitt. *āššuṽant-* ‘good, favourable, beloved’; *šarnikan* / *šarnikat* ~ Hitt. *šarninkant-* ‘compensated’.³⁷⁶ There can therefore be no doubt that these and other Kanišite names ending in *-an* have to be interpreted as containing an element *-ant-* as well.

It should be noted that the Hittite suffix *-ant-* is in fact [-and-], with a [d], which is clear from spellings *-an-ta-* next to *-an-da-* (cf. Kloekhorst 2013: 131–9 for the phonetic interpretation of this spelling). In the Kanišite names, this presence of a voiced stop may be confirmed by the spelling *inarawada* (besides *inarawa(n)*), with the sign DA (cf. § 6.1.5). We therefore should phonologically interpret this element as /-and-/, with a /d/.³⁷⁷

The second type is represented by the name *lakan*. As we have seen above as well (§ 4.2.3), on kt h/t 330 [1b] this name is found both as *lá-kà-an* and as *lá-kà-ni*, the latter variant of which can be interpreted as a Hittitoid dat.sg. form in *-i*. Since this latter form is written *lá-kà-ni* and not ***lá-kà-ti*, it apparently did not end in ***/-anti/* (***/-andi/*), but rather in */-ani/*. The name *lakan* therefore must be interpreted as ending in */-an/*, and not in ***/-and/*.³⁷⁸ Although the status of *lakan* as a Hittitoid name is unclear,³⁷⁹ there is a possibility to assume that its latter part *-an* is Hittitoid. This would mean that we can link

373 Its initial part, *kulš(a)-*, does not occur with any other Hittitoid element. In fact, it occurs with the probably non-Hittitoid element *-wašḫe* in *kulšawašḫe* (f.) (cf. section 4.7). Cf. footnote 381 for a treatment of this name.

374 Moreover, in AKT 6a, 197, the name *ašuan* occurs spelled *ašuwanzī* as well, which may represent a nom.sg. form ending in [-ants] (cf. footnote 540). This would be an extra argument to assume that *ašuan* underlyingly ends in *-ant-*.

375 Thus Laroche 1966: 314; Zehnder 2010: 11–2.

376 Cf. Laroche’s translation of *šarninkant-* as “réparé”. Cf. § 5.3.122, however, for the view that the original meaning of this name in fact was ‘compensating’.

377 If this is correct, the spelling of *ku-ul-ša-ta-āš* with the sign TA either must be viewed as a mistake, or it shows that this name does not in fact contain the Hittite suffix /-and-/ after all.

378 Cf. also Zehnder 2010: 13.

379 Its initial part, *lak-*, does not occur with any other Hittitoid element.

it to the Hittite nominal suffix *-an-* / *-en-* as is found in e.g. Hitt. *kutruṣan-* / *kutruēn-* ‘witness’. Moreover, an element *-an* is also present in the Hittitoid element *-uman* / *-umen* and, possibly, in *-kunian* / *-kunien* as well.

We can thus conclude that the Kanišite personal names contain two types of *-an*: one that in fact is *-and-*, and one that is simply *-an-*. The element *-and-* is clearly Hittitoid, whereas the status of the element *-an-* as Hittitoid may not be unlikely, but is difficult to ascertain.

It is not always easy to distinguish between the two elements. When a name in *-an* has a variant in *-at*, it is clear that it must have ended in *-and-*. However, if such a variant is not present, this does not mean that the name securely contains the element *-an-*. For instance, for the name *tarḥuan* (m.) no variant in *-at* is known, but it is nevertheless attractive to assume it ended in *-and-*, because in this way it can be compared to the Hittite participle *tarḥuuant-* (cf. § 5.3.147 for a treatment). Since I am aware of the fact that interpretations based on etymological considerations are in principle dangerous because they can lead to circular reasonings, I will always indicate what evidence the postulation of an element *-and-* is based on.

Note that Zehnder (2010: 13) argues that also names that are only attested ending in *-at* can sometimes be interpreted as containing the element *-and-*, because they can then be equated with Hittite participles, like e.g. Kanišite *ašiat* ~ Hitt. *āššijant-* ‘dear, beloved’. However, since *ašiat* is more likely a variant of *ašiet*, and the later name cannot be reconciled with a Hittite participle,³⁸⁰ I reject this interpretation of names in *-at*.

The names that are certainly Hittitoid (because their initial elements occur with other Hittitoid elements as well) and that probably ended in *-and-* are: *arawan* (m.), *ašuan* / *ašuat* (m.), *šarnikan* / *šarnikat* (m.), and *tarḥuan* (m.). Cf. the discussion of the initial elements of these names below (section 5.3) for their attestations and possible meanings.

Other names that could well have been Hittitoid and may have ended in *-and-* are the following: *a/ištalkian* (m.), *ḥaḥaluan* (f.), *ilališka(n)* (m./f.), *inarawa(n)* / *inarawada* (m.), *kunuan* / *kunuat* (m.), *šaḫiškan* (g.u.), and *watništuan* (m.). Since these names are not really compound names (except perhaps *watništuan*), I will treat them in Chapter 6.

One name that must have ended in *-and-* (or *-ant-*?, cf. footnote 377) but need not have been Hittitoid is *kulšan* / *kulšat-* (f.).³⁸¹ One name that certainly

380 Cf. section 7.1 for a treatment of the name pair *ašiat* / *ašiet*.

381 *ku-ul-ša-an* (ICK 1, 16b: 8; kt n/k 860: 4), *ku-ul-ša-ta-āš* (ICK 1, 16a: 2). Cf. § 4.2.3 for the interpretation of *kulšataš* as a form with a Hittitoid genitive ending. If the initial part *kulš(a)-* is to be equated with the initial element of the clearly non-Hittitoid *kulšawašhe* (f.), it would mean that *kulšan* / *kulšat-* probably was not Hittitoid either. Note that Kanišite *kulšan* / *kulšat-* is often equated with the participle *gulšant-* of the Hittite verb *gulš-zi* ‘to carve, to

must have ended in /-an/, but need not have been Hittitoid either, is *lakan* (m.).³⁸² The interpretation of the other names ending in *-an* is unclear. Not only whether they ended in /-an/ or in /-and/, but also to what extent they may have been Hittitoid. These are: *ašuran* (m.),³⁸³ *ḫatuan* (g.u.),³⁸⁴ *ḫaraštan* (g.u.),³⁸⁵ *ḫarḫaran* (g.u.),³⁸⁶ *ḫašušman* (g.u.),³⁸⁷ *kukran* (f.),³⁸⁸ *nakiahšan* (m.),³⁸⁹ *šitaraman* (g.u.),³⁹⁰ *tarakšan / tarkašan* (m.),³⁹¹ *titumian* (f.),³⁹² and *tuḫiumnan* (g.u.).³⁹³

inscribe' (e.g. Carruba 1966: 36; Tischler HEG 1: 628). However, as Waal (2014) has convincingly argued, the latter verb is in fact to be read GUL-š- (with GUL as a sumerogram), and phonetically probably was *kuḡa(n)š-*. This nullifies the connection with *kulšan / kulšat-*. Yakubovich's attempt (2013–2014: 288–95; followed by Melchert 2016a) to save the phonetic reading *gulš-* for the Hittite verb (even using the Kanišite name as an argument), is unconvincing.

- 382 *lá-kà-an* (kt h/t 330 [1b]: 1), *lá-kà-ni* (kt h/t 330 [1b]: 8). An element *lak-* does not occur in any other personal name that features a Hittitoid element (unless one wants to see a connection with *laknan-*, cf. § 5.3.82). Zehnder (2010: 13) suggests a connection with the Hitt. verb *lāk-¹ / lak-²* '(act.) to knock out; (midd.) to fall, to be felled', and more specifically the neuter abstract noun *lagan*, which he translates as "Neigung, Zuneigung". In his view, this noun is semantically suitable for being used in an onomasticon. However, Hitt. *lagan-* means just 'inclination, disposition', and sometimes has a clear negative connotation (cf. footnote 447). I therefore do not find this connection appealing.
- 383 *a-šu-ra-an* (kt c/k 183: 11). A connection with the Hittitoid element *ašu-* is difficult, since this would leave the *-r-* unexplained.
- 384 *[ḫ]a-tù-wa-an* (TC 3, 214b [1b]: 6). Read thus by OAPD ("Haduwan"), but cf. different readings by Donbaz 2001: 92 ("[S]á-du-wa-an") and Hecker aATU ("[Ku]-tù-wa-an").
- 385 *ḫa-ra-áš-ta-an* (LB 1218: 19; kt a/k 805a: 1, seal 1 (*ḫa-ra-áš[-...]*); kt a/k 805b: 15). If the name *ḫaraštal* (cited by OAPD for the unpublished text kt f/k 181 [1b]) is related, the alternation between *-n* and *-l* clearly indicates that this name is not Hittitoid.
- 386 *ḫa-ar-ḫa-ra-an* (CCT 1, 23: 16; TC 2, 53: rev. 15; kt 73/k 14 [1b]: 26).
- 387 *ḫa-šu-uš-ma-an* (ATHE 75: 5, 10). I wonder whether these two attestations should not in fact be read *ḫa-šu-ú-ma-an* and thus belong to the name *ḫašu'uman* (cf. footnote 612).
- 388 *ku-uk-ra-an* (BIN 4, 209e: 4, 9, 20; BIN 4, 209t: 3, 16; KTK 66: 11; POAT 47: 3 ([*ku-uk-ra-an*])). Another attestation of "Kukran" is cited by OAPD for the unpublished text kt k/k 32. Note that a name *kukra* (f.) exists, too (*ku-uk-ra* (kt 91/k 410: 1), also cited by OAPD for the unpublished texts kt 91/k 374 and kt 91/k 391), which may have to be equated with *kukran*.
- 389 *na-ki-a-ah-ša-an* (AKT 10, 29b: 1 (*na-[-...]-ša-an*); AKT 10, 34a: 21; AKT 10, 34b: 2; (the assumption that *na-[-...]-ša-an* of AKT 10, 29b stands for *na-[ki-a-ah]-ša-an* (e.g. Günbattı 2016 (= AKT 10): 68) is based on the fact that this person is mentioned as the father of a *pirua*, just as *nakiahšan* of AKT 10, 34 is mentioned as the father of a *pirua*). This name is reminiscent of *nakiahšu*, which has a clear Hittitoid character.
- 390 *ši-ta-ra²-ma-an* (KTS 51b: 18). Cf. footnote 478 for the fact that this name has sometimes – incorrectly – been interpreted as belonging to the Hittitoid names ending in *-uman*.
- 391 *ta-ar-ak-ša-an* (kt m/k 172: 4, 10), *ta-ar-kà-ša-an* (CCT 5, 34b: 20 (-ša'<-an>); TC 1, 87: 18). This name probably contained a cluster /-rks-/.
- 392 *tí-tù-mi-a-an* (kt 94/k 154: 3 (courtesy Michel)).
- 393 *tù-ḫi-um-na-an* (kt f/k 120: 3). The final part of this name is reminiscent of the Hittitoid element *-uman*. However, it is unclear what the relationship should be.

5.2.4 -ašu (m.)

There are many Kanišite personal names that end in -ašu,³⁹⁴ and a fair number of these occur with initial elements that are found with other Hittitoid elements as well, and therefore can be securely assumed to have a Hittitoid background. These names are: *apiziašu* (m.), *ḫalkiašu* (m.), *ḫapiašu* (m.), *ḫapuašu* (m.), *ḫaštašu* (g.u.), *ḫuziašu* (g.u.), *niwašu* (m.), and *šarnikašu* (g.u.). Cf. the discussion of the initial elements of these names below (section 5.3) for their attestations and possible meanings.

As we see, in all cases where the gender of the name can be determined, the name refers to a man. There may be one exception, however, namely the name *šupiašu* (kt 94/k 141 (courtesy Michel)), which refers to a woman since the individual bearing this name is mentioned as the secondary wife of an Assyrian merchant, *aššur-malik*, and as the daughter of the Kanišite pair *ḫapuašu* and *uniuni*. I would like to propose that we should emend it to *šupiašu<e>*, since the latter name is more often attested as a women's name (cf. the treatment of the element -ašue in § 5.2.5).

As we saw in § 1.5, the name *ḫapuašu* is generally equated with a name that occurs in texts from Ḫattuša and is then spelled ^m*ḫa-ap-pu-ṽa-aš-šu*.³⁹⁵ The presence of a geminate -šš- in the latter spelling implies that the Kanišite names contained a geminate /s:/ as well, and thus ended in /^oas:u/. When it comes to the -a- that is present in these names, it cannot be *a priori* decided whether it is a linking -a- or belongs with the final element of the name. One could therefore in principle parse either *apizi-ašu* or *apizi-a-šu*, either *ḫalki-ašu* or *ḫalki-a-šu*, etc. When looking for a possible cognate in Hittite, we should therefore take into account that we could be dealing with an element /-as:u/ as well as /-s:u/.

Already Hrozný (1932: 116) proposed a convincing connection for this element, namely with the Hittite adjective *āššu*- 'good, beloved' (cf. also Laroche 1951: 107; e.a.). Semantically, this connection makes good sense, since we can now translate e.g. *apizi-ašu* as 'last-beloved', *ḫalki-ašu* as 'beloved by the Grain

394 Some of the first elements used with -ašu also occur with -ḫšu (which will be treated below), e.g. *apiziašu* and *apiziahšu*, *ḫalkiašu* and *ḫalkiahšu*, *ḫapiašu* and *ḫapiaḫšu*. It has therefore sometimes been suggested that -ašu is "eine Lautvariante zu -aḫšu" (Bilgiç 1945–1951: 3) or that "[t]he possibility must be considered that -aš(š)u and -aḫšu are merely dialectic variants of the same suffix" (Goetze 1954a: 358) or "nur Lautvarianten" (Landsberger 1954: 122²⁷¹). However, since there are many names that only occur with -ašu, and many names that only occur with -(a)ḫšu (see at the treatment of -ḫšu for the nature of the -(a)-), there can to my mind be no doubt that these are two different elements. Thus also Bossert (1946: 156) who points out that, although names ending in -aḫšušar are manyfold (which are clearly -aḫšu + -šar), no names in *-ašušar are attested.

395 Cf. footnote 27 for an overview of attestations.

(god)’,³⁹⁶ etc. (cf. the treatments of the initial elements in section 5.3 for their possible translations). On the basis of this connection we can safely assume that the Kanišite element should be /-as:u/ instead of /-s:u/.³⁹⁷

Apart from the names cited above, there are also other Kanišite names ending in *-ašu* which use an initial part that does not occur with any other Hittitoid element. For two of these, I assume that they must have been Hittitoid anyway, namely *ḫumadašu* / *ḫumundašu* (m.) and *tarḫutašu* (m.), the initial elements of which will be treated in section 5.3. For the other names ending in *-ašu* I find it more difficult to decide whether they could be Hittitoid or not. These names are:³⁹⁸ *arašu* (g.u.),³⁹⁹ *arnuašu* / *irnuašu* (m.),⁴⁰⁰ *atuašu* (g.u.),⁴⁰¹ *ḫaḫuašu* (g.u.),⁴⁰² *ḫarašu* (m.),⁴⁰³ *ḫawawašu* (m.),⁴⁰⁴ *kanuašu* (g.u.),⁴⁰⁵ *kidašu* (m.),⁴⁰⁶

396 Thus already Hrozný 1932: 116.

397 Note that the Hitt. adjective *aššu-* should phonologically be interpreted as /ʔás:u-/ , with an initial glottal stop (cf. Kloekhorst 2014: 335, 648). This need not be problematic, since one can imagine that in compounding this glottal stop would be lost in postconsonantal and intervocalic position.

398 A name *ḫimadašu* is cited by Donbaz (1989: 80⁹) for kt e/k 167 [1b], the first line of which he gives as “[KI]ŠIB Ḫi-ma-[da-šu]” (likewise OAPD, which cites “Himadašu”). No justification of the restoration of *-da-šu* is provided, however, so it is unclear whether this emendation is trustworthy. It therefore seems best to strike the name “*ḫimadašu*” from our inventory. A name *šaktunuašu* is cited by CDLI for KTP 44 (*ša-ak-tù-nu-wa-šu* (obv. 7), *ša-ak-tù-nu-wa-šu* (rev. 4)). In both cases the name is preceded by *um-ma* ‘thus speaks’, however, and it is therefore more likely that the last sign of these forms should not be read *šu*, but rather *ma*, and that in both cases we are dealing with *šaktunua=ma* (note that the name *šaktunua* is attested elsewhere as well, cf. section 4.7, with footnote 303). A name “*Aš-kà-na-šu*” is cited by e.g. Goetze 1954a: 357 for TC 3, 191: 8 (which in Goetze’s view is “certainly to be combined with Hitt. *aška-* ‘gate’”). However, the form rather reads *áš-kà-na-šu-x[...]*, instead, and thus does not end in *-ašu*, and therefore does not belong here.

399 *a-ra-šu* (kt g/t 42 + z/t 11 [1b]: 43). In principle, the initial element *ar(a)-* could be equated with Hitt. *ār-ⁱ* / *ar-* ‘to arrive’, *ar-^{ta(r)}* ‘to stand’, or *arā-* ‘friend’. However, since no other Kanišite Hittite compound name contains this element, this is nothing more than speculation.

400 *a-ar-nu-a-šu* (KKS, 6a: 3), *ir-nu-wa-šu* (KKS, 6b: obv. 4). Note that both spellings refer to a single individual. Cf. § 3.2.3 for the possibility that the spelling alternation points to an underlying /rnu^o/ or /ʔrnu^o/. In principle, this element could be equated with the Hittite verb *arnu-^{zi}* ‘to move, to deport’ < **h₁r-neu-*. However, since this element is unattested with any other Hittitoid element, this is rather speculative.

401 *a-tù-k-šu* (kt v/k 52: 10; kt 87/k 296: 3 (courtesy Kryszat)). Note that the names *atu* and *atua* exist as well.

402 *ḫa-ḫu-wa-šu* (kt 73/k 14 [1b]: 9). Note that the name *ḫaḫua* exists as well.

403 *ḫa-ar-a-šu* (kt 94/k 282: 9 (courtesy Barjamovic)).

404 *ḫa-wa-wa-šu* (kt m/k 36: 3). Cf. section 4.4 for a discussion of Yakubovich’s interpretation (2010: 210–3) of this name as being of a Luwian origin.

405 *kà-nu-a-šu* (ICK 1, 172: 4).

406 *kī-da-šu* (AKT 3, 10: 7).

nawašu (m.),⁴⁰⁷ *nuašu* (m.),⁴⁰⁸ *paziašu* (g.u.),⁴⁰⁹ *pukdašu* (m.),⁴¹⁰ *punawašu* (g.u.),⁴¹¹ *šakuašu* (m.),⁴¹² *tiwadašu* (g.u.),⁴¹³ *zaḥudašu* (m.),⁴¹⁴ and *zawadašu* (m.).⁴¹⁵ The woman's name *utruašu*⁴¹⁶ certainly does not belong here, because of its deviant gender.

5.2.5 -*ašue* (f.)

The element -*ašue* occurs in several Kanišite names, three of which clearly belong to the group of Hittitoid compound names, since they contain an initial element that combines with other Hittitoid elements as well. These names are *šakriašue* / *šikriašue* (f.), *šupiašue* (f.), and *watniašue* (f.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

As we see, all three names are women's names, and this goes for the other names in -*ašue* as well (in as far as their gender can be determined). Because the combination of the element -*ašue* and feminine gender is so specific, I regard these names as securely Hittitoid as well: *iantašue* (f.), *laḥašue* (g.u.), *kapziašue* (f.), *muliliašue* / *puliliašue* (f.), *nišašue* (f.), *talḥamašue* (f.), and *pala'anašue* (g.u.). Their initial elements will therefore be treated in section 5.3 as well, where also discussions of these names, including attestations and possible meanings, can be found.⁴¹⁷

In a number of attestations of these names in -*ašue* the last syllable is spelled with the sign , which can be read *wa*, *we*, *wi*, and *wu*. However, on the basis of a comparison of the attestations *ša-ak-ri-áš-WA/E/I/U* (kt a/k 94a: 3) and *[ša-a]k-ri-áš-WA/E/I/U-e* (kt a/k 94b), which are found on a tablet and its matching envelope and therefore must refer to a single individual, it is clear that the sign E as used in the latter has the function to disambiguate the preceding ambiguous sign, which must therefore be read *we*, i.e.

407 *na-wa-šu* (kt c/k 1641: 17).

408 *nu-wa-šu* (AKT 10, 2a: 21; AKT 10, 2b: 2).

409 *pá-zi-a-šu* (AKT 10, 18a: 15).

410 *pu-uk-da-šu* (BIN 6, 92: 6).

411 *pu-na-wa-šu* (kt d/k 2: 6; kt k/k 100: 6 (courtesy Kryszat)). Cf. section 4.4 for a discussion of Yakubovich's interpretation (2010: 210–3) of this name as Luwic.

412 *ša-ku-a-šu* (AKT 10, 13a: 5; AKT 10, 13b: 2, 11). In principle, the element *šaku(a)-* could be equated with Hitt. *šākuḡa-* 'eye' ('beloved for/by the eye?'). However, without having security about the Hittitoid status of this name, this is mere speculation.

413 *tí-wa-da-šu* (kt k/k 100: 12 (courtesy Kryszat)).

414 *za-hu-da-šu* (KKS 31a: 5; KKS 31b: 2, 11).

415 *za-wa-da-šu* (Kayseri 308: 5, 9).

416 *ut-ru-wa-šu* (BIN 4, 68: 15), *ut-ru-a-šu* (POAT 31: 8).

417 The name *ḥašue* (g.u.) as attested once (*ḥa-šu-e* (OIP 27, 38: x+8)) will be left out of consideration: its initial part is too short to warrant an interpretation as a compound name.

[ša-a]k-ri-áš-we-e. This value then also goes for the former form, which we should transliterate *ša-ak-ri-áš-we*. The fact that we also find the spelling *ša-ak-ri-a-šu-e* (kt a/k 244: 4) confirms these readings. On the basis of this example it is attractive to read other names ending in -áš-WA/E/I/U as -áš-we as well, which in the case of *šu-pi-áš-we* nicely fits the attestation *šu-pi-áš-ú-e*.⁴¹⁸ All in all, there can be no doubt about the reading of these names: they all end in -ašue.

With regard to the interpretation of -ašue, I refer to Chapter 8, where it will be argued that -ašue can be analysed as -ašu-e, in which -e is a feminizing suffix that has been attached to the element -ašu /-as:u/ (§ 5.2.4), which forms men's names and probably means 'beloved'.

5.2.6 -hšu (m.)

The element -hšu is, together with -uman, one of the most common elements within the corpus of Kanišite names. In all cases where the gender of the person bearing a name in -hšu can be determined, this person is male. This is significant since, as we have seen above, the element -hšu thus stands in contrast with the element -hšušar (see its treatment in the next section), which always forms women's names. As discussed in section 4.3 (see there for references), the fact that the elements -hšu and -hšušar form a gender pair is the most important argument for identifying these names as Anatolian (in the Indo-European sense of the word), and the names in -hšu therefore can be regarded as forming the core of the Hittitoid compound names. Many of the names that use -hšu as its final part contain an initial element that is found with other Hittitoid elements as well. These names are: *apiziahšu* (m.), *arawaḫšu* (g.u.), *ašuaḫšu* (g.u.), *ataḫšu* (m.), *ḫalkiaḫšu* (g.u.), *ḫapiaḫšu* (m.), *ḫaršumnaḫšu* (m.), *ḫaštaḫšu* / *ḫištaḫšu* (m.), *ḫašuaḫšu* (g.u.), *ḫataḫšu* (g.u.), *ilaliaḫšu* (m.), *inaraḫšu* (m.), *išpudaḫšu* / *šupudaḫšu* (m.), *išpunaḫšu* / *šapunaḫšu* / *šipunaḫšu* / *šupunaḫšu* (m.), *kulanaḫšu* / *kulunaḫšu*(?) (g.u.), *mariaḫšu* (g.u.), *nakiaḫšu* (m.), *nimaḫšu* (g.u.), *niwaḫšu* (m.), *piruaḫšu* (m.), *šadaḫšu* (m.), *šakriaḫšu* (m.), *šamnaḫšu* (m.), *šupiaḫšu* (m.), and *utniaḫšu* / *watniaḫšu* (m.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

Apart from these names, of which I regard their Hittitoid character as certain, there are some thirty other names ending in -hšu, the initial part of which does not occur with other Hittitoid elements. Nevertheless, since -hšu is such a characteristic element, I regard these as certainly Hittitoid too. These

⁴¹⁸ Cf. footnote 879 for an overview of the different spellings of this name.

names are:⁴¹⁹ *a'ahšu* (m.), *alum(i)ahšu(?)* (m.), *amunahšu* (m.), *arunahšu* (g.u.), *aruaḥšu* (g.u.), *aruanahšu* (m.), *arzanahšu / arzinahšu* (m.), *ḥatkiahšu(?)* (g.u.), *ipiahšu* (g.u.), *kidahšu* (m.), *kikarašnahšu* (m.), *kiniahšu* (g.u.), *kunutaḥšu* (g.u.), *kupidahšu* (m.), *laḥraḥšu / laḥuraḥšu / luḥraḥšu* (m.), *maḥiraḥšu* (g.u.), *mišnahšu* (g.u.), *pirutaḥšu*^(?) (g.u.),⁴²⁰ *pišahšu* (m.), *pišanaḥšu* (g.u.), *šumiraḥšu* (g.u.), *tarahšu* (g.u.), *tuaraḥšu* (g.u.), *ulimaḥšu* (g.u.), *upatiaḥšu* (m.), *ušmanaḥšu* (g.u.), *wa'anaḥšu* (m.), *walahšu* (g.u.), and *zarzaḥšu* (m.). Their initial elements will therefore be treated in section 5.3 as well, where also discussions of these names, including attestations and possible meanings, can be found.

In all these names the element *-ḥšu* is preceded by an *a*.⁴²¹ In some cases, this *a* may belong with the initial element (e.g. *niwa-ḥšu*, *pirua-ḥšu*, *šada-ḥšu*), but in most cases I assume that the *a* is a linking element (cf. the discussion in section 5.1): e.g. *ašu-a-ḥšu*, *ḥalki-a-ḥšu*, *ḥaršumn-a-ḥšu*, etc.

Cf. § 4.3.1 for a full treatment of the equation between the element *-ḥšu* and Hitt. *ḥaššu*- ‘king’ and HLuw. *hasu*- ‘descendant’, which suggest that *-ḥšu* may have had the meaning ‘born, descendant’ (Goetze 1954a: 355). Cf. section 9.2 for a discussion of the prehistory of its shape.

5.2.7 *-ḥšušar* (f.)

The element *-ḥšušar* occurs in some seventeen Kanišite personal names, and is thus well attested. In all cases in which the gender of the individual bearing a name ending in *-ḥšušar* can be determined, we are dealing with a woman. As we have seen above, the fact that the feminine element *-ḥšušar* forms a pair with the masculine element *-ḥšu* is the most important argument in favour of an Anatolian (in the Indo-European, linguistic sense of the word) identification of these names. The majority of names ending in *-ḥšušar* have an initial element that also combines with other Hittitoid elements, and therefore can be securely regarded as Hittitoid. These names are: *ḥapiaḥšušar* (f.), *ḥapuaḥšušar*

419 Note that the name spelled *šu-up-a-aḥ-šu* (cf. footnote 876 for attestations) is interpreted here as representing *šupiaḥšu* (with the broken spelling *-up-a-* indicating the presence of the weak consonant *y*, cf. Kouwenberg 2017: 44). A name *kilariaḥšu* is cited by Dercksen (2014: 198) for kt 73/k 14 [1b]: 28, but Hecker (aATU) cites for this line a word *ki-lá-ri-wu*, whereas the signs *-aḥ-šu* rather belong with the name *pi-ša-na-aḥ-šu* of line 30 (cf. at the treatment of the element *pišan(a)-*, below). The name “Lahutahšu” as cited by OAPD for AKT 1, 79, should rather be read *laḥuraḥšu*, cf. footnote 742. An acephalic name [...]-*kà-da-aḥ-šu* is found in AKT 10, 11b: 1.

420 The reading of the second sign of this name is unclear; cf. § 5.3.106 for a discussion.

421 The only exception may be the name *^mtaruḥšu-* as attested in Hittite texts, and which was used by Goetze (1954a: 354) as an argument in favour of analysing all these Kanišite names as ending in *-ḥšu*, not in *-aḥšu*, cf. footnote 154.

(f.), *haš<t>aḥšušar*⁴²² / *hištaḥšušar* (f.), *hata<h>šušar* (f.),⁴²³ *inaraḥšušar* (f.), *nimaḥšušar* (f.), *niwaḥšušar* (f.), *šadaḥšušar* (f.), *šam(n)aḥšušar* (g.u.), *šašaḥšušar* / *šišaḥšušar* (f.), *šupiaḥšušar* (f.), and *uštaḥšušar* (f.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

The other names ending in *-ḥšušar* contain an initial element that is unattested with any other Hittitoid element. However, because of the specificity of the element *-ḥšušar*, as well as the fact that whenever the gender of these names can be determined, they are feminine, I regard these names as certainly Hittitoid as well: *aliaḥšušar* (f.[?]), *arpuaḥšušar* (f.), *eliaḥšušar* (g.u.), *kaḥšušar* (f.), *kuninaḥšušar* (f.), *laknanḥašušar* (f.), *liḥšušar* (f.), *nitaḥšušar* (f.), and *zilanahšušar* (f.). Their initial elements will therefore be treated in section 5.3 as well, where also discussions of these names, including attestations and possible meanings, can be found.

In the majority of cases, the element *-ḥšušar* is preceded by an *a*, which has led e.g. Zehnder (2010: 72) to define the element as *-aḥšušar*. However, the attestation of the name *laknanḥašušar*,⁴²⁴ which was unknown to Zehnder, shows that the element is in fact *-ḥšušar* (with *laknanḥašušar* representing /laknan-hsuser/), and that the *a* that so often precedes it must be the linking *-a-* (cf. section 5.1): e.g. *šupi-a-ḥšušar*.

The element *-ḥšušar* can within the group of Kanišite personal names be connected with the women's names *ḥašušar* (f.), *ḥašušarna* (f.), *ḥašušarnika* (f.) and *ḥašušra* (f.).⁴²⁵ Especially the fact that in the latter of these names no vowel is spelled between the *š* and the *r* indicates that in all cases where we find an *a* between these consonants, this is in fact a dead vowel, and that all these names should be analysed as ending in a cluster */-sr/*.

As we have seen in § 4.3.1, the element *-ḥšušar* is generally equated with the Hittite word **ḥaššuš(ša)ra-* 'queen', under the assumption that this word originally meant 'female descendant'.⁴²⁶ The Hittite evidence points to an

422 Cf. footnote 603 for the emendation in this form. Cf. § 3.2.3 for the *a/i*-alteration.

423 Cf. footnote 623 for the emendation in this name.

424 Cf. footnote 743 for an overview of attestations.

425 Cf. § 5.3.39 with footnotes 618, 619 and 620 for a more thorough treatment and overview of attestations of these names.

426 Thus also Zehnder 2010: 73–4.

underlying form /has:us:rá-/,⁴²⁷ with two instances of a geminate /-s:-/.⁴²⁸ As will be explained in section 9.2, in compounds we may assume that the first /-s:-/ of this element was lenited, and I will therefore phonologically analyse *-ḥšušar* as /-hsus:r/. Moreover, in section 9.2 it will be explained why there is no vowel between the /h/ and the /s/ of Kanišite /-hsus:r/. Furthermore, it should be noted that the Kanišite element *-ḥšušar* ends in an *r* (which is supported by the names *ḥašušar*, *ḥašušarna* and *ḥašušarnika*), whereas Hittite **ḥaššuš(ša)ra-* ends in an *-a-*. However, since in Hittite the *a*-stem inflection was productive, and since the PIE feminizing suffix **-sr-*, which is generally thought to be present in this word, was originally athematic,⁴²⁹ there can be no doubt that the Hittite *a*-stem noun **ḥaššuš(ša)ra-* originally was athematic, **ḥaššuš(ša)r-*. In that sense it thus is a perfect formal match to Kanišite *-ḥšušar*.

5.2.8 *-kunian* / *-kunien* (f.)

An element *-kunian* is attested in two Kanišite personal names only, which both refer to women: *šiwaškunian* (f.) and *tipukunian* (f.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

According to Zehnder (2010: 8), these names cannot be Hittitoid because, to his mind, they belong to the same sphere as the names ending in *-kuni*, for which he has convincingly argued that these have no connection to the Hittite language (Zehnder 2010: 5). His reasons for connecting the names in *-kunian* to the names in *-kuni* are weak, however. His first argument is that names ending in the element *-kunian* can be connected to the *-kuni*-names because “sie offenbar ebendieses Element enthalten” (2010: 8). This is an unfounded assumption, however. None of the *-kuni*-names have *šiwaš-* or *tipu-* as their initial element, so the comparison concerns the element *-kuni(-)* only. Moreover, the element *-kuni* forms men’s names, whereas *-kunian* forms women’s

427 Note that often the Hittite word for ‘queen’, which is itself unattested, is reconstructed as **ḥaššušara-*, with a single *-š-* in its suffix (thus Zehnder 2010: 74 and HW² H: 457f.), but it certainly must have ended in *-š(ša)ra-*, with a geminate *-šš-*, cf. Kloekhorst 2014: 81, with footnotes 277 and 278.

428 If the plant’s name *ḥašušara-* (n.), which shows single spelling of its first *-š-* (nom.-acc.sg. *ḥa-šu-uš-ša-ra-a-an* (KUB 7.41 i 21 (MH/NS), KBo 24.47 iv 19 (NS)), is originally identical to the word for ‘queen’, it may show that this word actually was /hasus:rá-/. However, since the word is unattested in phonetic spelling, we cannot ascertain this. Cf. Kloekhorst 2014: 81 for a discussion of these forms.

429 Cf. Skt. nom.pl.f. *tisrās* ‘three’ and *cātasras* ‘four’ < **-sr-es*.

names.⁴³⁰ Zehnder's second argument is that the element *šīwaš-* as found in *šīwaškunian* also occurs with *-mei*, which he views as forming a group with the *-kuni*-names (Zehnder 2010: 6–7). However, the assumption that the *-kuni*-names and the *-mei*-names belong to a single linguistic background is unfounded, as will be argued in § 5.2.11.

To my mind, a Hittitoid identification of the *-kunian*-names is probable. It is indeed true that the element *šīwaš-* is found with only a single other Hittitoid element (*šīwašmei*), so that its status as Hittitoid is less secure. However, the element *tipu-* is attested in two other Hittitoid names, *tipula* (m.) and *tipulka* (f.), and especially the latter is well established as Hittitoid because of the element *-lka*. There can therefore be no doubt that *tipu-* is a Hittitoid element, and it is therefore reasonably likely that *tipukunian*, and thus the element *-kunian*, is Hittitoid, too.

A variant of *-kunian* may be found in the woman's name *šī-mī-iš-ku-ni-in* (f.) as found once in kt 88/k 971: 38.⁴³¹ An element *šīmiš-* is known from the name *šīmišmei*, so that we can safely analyse *-ku-ni-in* as the second element. An equation between *-kunian* and this *-ku-ni-in* is attractive since both elements occur in women's names, and since the pair *šī-mī-iš-ku-ni-in* ~ *šīmiš-meī* would then be parallel to the pairs *šīwaš-kunian* ~ *šīwaš-meī* and *šīwiš-kunian* ~ *šīwiš-meī*.⁴³²

Formally, the connection between *-kunian* and *-ku-ni-in* may be compared to the connection between *-uman* and *°u-mī-in*, which will be treated below. As we will see, the variant *°u-mī-in* probably represents *°u-me-en₆* = */-omen/*, an original allomorph of *-uman* */-oman/*. If we are allowed to take this as a parallel, we have to assume that *-ku-ni-in* should be read *-ku-ni-en₆* = *-kunien*, and thus forms a variant of *-kunian* with *e* instead of *a*. The interpretation of the spelling *-ni-in* as denoting a diphthong *-ni-en₆* is unproblematic: cf. § 3.2.12 for the reading of e.g. *a-šī-it* as *a-šī-et* = *ašiet*.

Since *-kunian* / *-kunien* forms women's names, it may be attractive to think of a connection between its initial part, *-kun-*, and the Hittite word for 'woman', which must have had the shape **/k^wán:- / k^wn[̃]-/*.⁴³³ If this connection is valid, we may interpret its latter part, *-ian* / *-ien*, as a suffix comparable to the complex suffix **-i-on-* that is reconstructed for Hittite nouns ending in *-anzan-* <

430 Zehnder remarks that the element *-an* in *-kunian* could be a Motions-suffix (2010: 8), but without real pairs (like e.g. *ḫištahšu* (m.) vs. *ḫištahšušar* (f.)), this assumption cannot be substantiated.

431 Cf. Donbaz 2008a: 214–7, collated by Dercksen 2015: 57–8.

432 Cf. § 5.3.125, 5.3.127 and 5.3.128 for these initial elements.

433 Reflecting PIE **g^wen-h₂- / *g^wn-eh₂-*. Cf. Kloekhorst 2014: 460–1.

*-ent-i-on-,⁴³⁴ albeit with *e*-grade: *-i-en-s > /-ia(n)-s/ and *-i-en-m > /-ien-an/. However, it is clear that these considerations must be viewed as speculative.

5.2.9 -la (m.)

As we have seen above in the treatment of -ala (m./f.) (§ 5.2.1), there are several Kanišite names that have a Hittitoid initial element and that end in -la, which implies that -la is a Hittitoid element, too. These names are: *ašula* (g.u.), *marila* (m.), *šumila* (m.), *tipula* (m.), and *tarḫala* / *tarḫula* / *tarḫuala* = /tarh^wla/ or /trh^wla/⁴³⁵ (m.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

It is not easy to find a good Hattuša Hittite comparandum to this element, however. Bilgiç (1945–1951: 6) compared the name *ašula* to Hitt. *aššul(a)*- ‘favour, well-being’, a comparison that is semantically certainly attractive.⁴³⁶ However, within Hittite, it is clear that the original form of this noun was a neuter consonant stem *aššul-*, which only later on was thematicized to the common gender noun *aššula-*.⁴³⁷ This chronology is not favourable to a connection with Kanišite *ašula*. However, according to Rieken (2008: 247–53), Hitt. *aššul-* does in fact reflect an earlier formation in *-úlo-, which underwent syncope in its nom.-acc.sg. form *-úlom > *-úlm > *-úl. This still does not save the direct equation between Kanišite *ašula* and Hitt. *aššul* < *-úl-o-, since the latter noun is neuter. Nevertheless, the underlying idea could have merit for identifying the Kanišite element -la. In Rieken’s view, all Hittite -ul- and -il- stems derive from original *-lo- stems showing the developments *ú/i-lo-s > *ú/išs > -ú/iš and *ú/i-lo-m > *ú/išm > -ú/iš. This idea was extended by Melchert (2014: 209–10) to Hittite neuter stems in -Cal as well, which would have undergone a development *-C-lo-m > *-Cšm > *-Cal. If these views are correct (but I have my doubts, to be honest), it would imply that pre-Hittite did know a nominal suffix *-lo-, which may then be equated with the Kanišite element -la.

Note that if *tarḫala* / *tarḫula* / *tarḫuala* really represents an underlying /trh^wla/ (cf. § 3.2.7 for this option), it would imply an accentuation /trh^wlá/, with accent on the element -la.

434 Cf. Melchert 2003b.

435 Cf. § 5.3.147 for this option.

436 Likewise Alp 1952: 252⁹, who analyses *ašula* as “Hittite *ašu-* ‘good’ + Protohittite suffix -ul + Hittite thematic vowel -a”.

437 Cf. Rieken 1999: 459–60, who dates this thematicization to the second half of the 13th century BCE.

5.2.10 *-lka* (f.)

The element *-lka* occurs in some twenty-five names, the majority of which contains an initial element that is combined with secure Hittitoid elements, and we can therefore safely regard *-lka* as Hittitoid, too. These names are: *ašuelka* (g.u.), *atalka* (g.u.), *azulka* (f.), *azuelka* (f.), *ḥaršumalka* / *ḥaršumilka* / *ḥaršumnalka* (f.), *ḥatilka* (m.?), *iatalka* (f.), *ilalialka* / *ilalilka* (g.u.), *nakialka* (g.u.), *niwalka* (f.), *šakrilka* / *šikrilka* / *zikrilka* (f.),⁴³⁸ *šašalka* (f.), *šimnilka* / *šinilka* (f.), *šiwanalka* (f.), *šupilka* (f.), and *tipulka* (f.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

In almost all cases in which the gender of the individual bearing a name ending in *-lka* can be determined, this person is a woman. In only one case, namely *ḥatilka*, we seem to be dealing with a man's name: in kt 99/k 139 [1b] (Donbaz 2004: 276–7), we find both on the envelope and on the tablet the sentence ... *ḥatilka* DUMU *zuzupa* *išu* '*ḥatilka*, son of *zuzupa*, has a claim ...',⁴³⁹ in which DUMU 'son' as well as the 3sg.m. form *išu* 'he has a claim' seem to indicate that *ḥatilka* refers to a man. However, since kt 99/k 139 contains many Kanišite names, it cannot be excluded that the text was written by a local person. And since it is known that locals make gender mistakes (using, for instance, masculine verbal forms where feminine verbal forms would be correct, cf. § 4.2.1, point 8), we may be allowed to assume that *išu* is a mistake. This still leaves us with DUMU 'son' as an indication that *ḥatilka* is a man, however. Are we allowed to assume that in this case DUMU is used more generally for 'child'?⁴⁴⁰

Whatever be the right interpretation of *ḥatilka*, it is clear that in the vast majority of these names the element *-lka* marks feminine gender. This also goes for the remaining names ending in *-lka* whose initial parts are not attested with any other Hittitoid element. However, because of the peculiar shape of the element *-lka* in combination with the fact that it marks feminine gender (note that women's names are far less often attested than men's names), I believe that these names, too, can be securely regarded to belong to the group

438 The gender of the names *šakrilka* and *šikrilka* themselves cannot be independently determined, but note that the name *zikrilka*, which according to Michel (2001: 457, 460–1, with footnote 432) refers to the same individual to whom *šakrilka* and *šikrilka* refer, is certainly a woman's name.

439 kt 99/k 139a [1b]: (7) *ḥa-ti-il₅-kà* DUMU *zu-zu-pá i[-šu]*; kt 99/k 139b [1b]: (5) *ḥa-ti-il₅-kà* DUMU *zu-zu-p[á]* (6) *i-šu*....

440 Zehnder (2010: 84) states "alle entsprechenden Personen [scil. who bear a name ending in *-lka*], deren Geschlecht sich aus dem Kontext bestimmen lässt, [hatten sich] als Frauen erwiesen, bis schliesslich im 1999 gefundenen Dokument kt 99/k 139 ein Männername ^(m/f?)*Ḥatilka* auftauchte. Dadurch wird der Status von *-lka* als ausschliesslich Frauennamen bildendes Element in Frage gestellt."

of Hittitoid compound names: *ašalka* / *ašilka* (f.), *aš'alka*(?) (f.), *ašimnilka*(?) (f.), *enilka* (g.u.), *ḫuialka* (f.), *minuzilka* (g.u.), *pitianalka* (f.), *šunilka* (f.), *titipilka* (f.), *tupizialka* (f.), and *wanialka* (f.). Their initial elements will therefore be treated in section 5.3 as well, where also discussions of these names, including attestations and possible meanings, can be found.

We see that in some names the element *-lka* is preceded both by *a* and by *i*, e.g. *ašalka* / *ašilka* (both names referring to a single individual, cf. section 3.2), or *ḫaršumalka* / *ḫaršumilka*. As explained in § 3.2.3, this alteration between *a* and *i* indicates that *a* is a dead vowel, and that *i* is the phonetic rendering of a subphonemic anaptyctic vowel that is sometimes used in the pronunciation of consonant clusters. So *ašalka* / *ašilka* represent an underlying /aslka/, which could be pronounced [aslka], spelled *ašalka*, as well as [asəlka], spelled *ašilka*. Likewise, *ḫaršumalka* / *ḫaršumilka* represent an underlying /harsumnlka/ (cf. the spelling *ḫaršumnalka* with *-mn-*), which could be pronounced [harsum:lka], spelled *ḫaršumalka*, as well as [harsum:əlka], spelled *ḫaršumilka* (for the rendering of /mn/ as [m:], cf. § 3.2.8). However, not all cases where we find an *i* before *-lka* this is an anaptyctic vowel. For instance, in *šupilka* it must be part of the initial element *šupi-* (cf. § 5.3.136). Likewise, not all cases of *a* before *-lka* represent a dead vowel: in e.g. *niwalka*, the *a* is probably part of the element *niwa-* (cf. § 5.3.102). Moreover, there are some names in *-lka* where we seem to find a linking *-a-* as well, namely in *nakialka*, which probably should be analysed as *naki-a-lka* (cf. § 5.3.98 for the treatment of *naki-*).

Note that the analysis of the *i* preceding *-lka* as a possible anaptyctic vowel has interesting consequences for some names. Take for instance, the name *šimnilka*, which contains the initial element *šimn-* that in other names is spelled *šamn-* as well and thus must represent an underlying /smn-/.⁴⁴¹ Taking the *i* before the element *-lka* as an anaptyctic vowel, this would mean that *šimnilka* represents an underlying /smnlka/, pronounced [səmnəlka]. Since in /smnlka/ there is only one vowel, /a/, I assume that this bore the accent: /smnlká/. Similarly in *šašalka*, in which the first *a* may be a dead vowel (cf. the alteration *šaš(a)-* / *šiš(a)-* in other names, cf. § 5.3.123), and the second as well, yielding an underlying form /sslka/, which can only be accentuated /sslká/.

It is not easy to provide the element *-lka* with a Hittite interpretation. Some scholars⁴⁴² have argued that *-lka* is the syncopated version of an element *-lika* that is present in the women's names *šašalika* and *šišalika*.⁴⁴³ Others have taken over this idea and argued that the element *-lika* may be a dissimilated vari-

441 Cf. § 3.2.3.

442 Lewy 1938: 136¹; Goetze 1954a: 353.

443 Cf. footnote 843 for an overview of attestations of these names.

ant of *-nika*, e.g. Laroche (1966: 309): “Une dissimilation de *-niga* après nasale (*Harsum-*, *Pitiana-*, *Niwa-* ?) n’est pas exclue ; cf. hitt. *laman* < **naman*”.⁴⁴⁴ This view is problematic for several reasons, however. First, there are many names in *-lka* that do not have a nasal in their first part: *ašuelka*, *azulka*, *ḥatilka*, *iatalka*, *ilalialka*, *šakrilka*, etc. Second, there are many names ending in *-nika* that do have a nasal in their initial element: *aškunanika* / *iškunanika*, *ḥamananika*, *makanika*, *šamnanika*, *šaptamanika*, *tamnanika*. In fact, these names form the majority of names in *-nika* (cf. § 5.2.12). The data therefore do not point towards an old distribution between an original *-nika* and a dissimilated *-l(i)ka* at all. Third, the assumption that *-l(i)ka* is in fact the same as the element *-nika* does not explain why the former element has undergone syncope of its *i*, whereas the latter has always remained unsyncopeated (no names in ***-nka* exist). Fourth, the names in *-nika* use in the vast majority of cases a linking *-a-* between the first and second element (e.g. *šamn-a-nika*, *šupi-a-nika*, *ḥapu-a-nika*), whereas *-lka* is usually directly attached to the initial element (e.g. *ašalka* / *ašilka* = /as-lka/, *azu-lka*, *ḥarsumalka* / *ḥaršumilka* = /harsum:-lka/). This speaks against the idea that these elements were originally identical. Fifth, there are quite a few examples of names in which *-lka* and *-nika* combine with the same element (*iatalka* vs. *iatanika*, *šimnilka* vs. *šamnanika*, *šašalka* vs. *šašanika*, *šupilka* vs. *šupianika*). These strongly speak against the idea that *-l(i)ka* and *-nika* were originally complementarily distributed. I therefore agree with Zehnder when he states about the equation of *-l(i)ka* with *-nika* that “[d]ieser Erklärungsversuch nicht viel Kredit [verdient]” (2010: 84). This does not mean that I do not think that there could be a connection between the names in *-lka* and the names *šašalika* and *šišalika*. As said above, I think that the name *šašalka* stands for an underlying /sslká/, and it does not seem impossible to me that this name could be pronounced in different ways, namely as [sslká], spelled *šašalka*, as [ssləká], spelled *šašalika*, and as [səsləká], spelled *šišalika*. In other words, the *i* in the element *-lika* is not, as has been thought for a long time, an original vowel that was syncopeated after which *-lka* developed, but rather a secondary, anaptyctic vowel that developed in the original sequence *-lka*. This means that in order to find a possible origin of these names, we should use *-lka* as our point of departure, not *-lika*.

According to Landsberger (1954: 124), *-lka*, as well as *-nika* and *-ška*,⁴⁴⁵ are all a “Liebkose-Suffix”, and are “identisch [...] mit den gleichlautenden, noch heute in den slavischen Sprachen gebräuchlichen [Suffixe]; so lautet im

444 Others who have spoken in favour of a connection between *-nika* and *-lika* are Landsberger 1954: 124 and Neumann 1974: 280.

445 Which, in fact, is only attested in the name *ilališka(n)*, which will be treated in § 6.1.4.

Čechischen die Koseform des PN *Anna* etwa *Anninka*, *Anneška*, *Andulka* mit vielen Spielformen". As we have seen, it is clear that *-lka* has nothing to do with *-nika*, however, and the same goes for *-ška*. Moreover, the enormous productivity of such hypocoristic suffixes in Slavic rather speaks against an ancient genetic relationship with the Kanišite Hittite suffixes (similarly Hamp in his comments on these ideas as cited by Landsberger himself, 1954: 124²⁸⁶). This suggestion is therefore best forgotten.

A more interesting analysis is provided by Zehnder (2010: 84–5), who rightly states: "Die Struktur der *lka*-Namen erinnert an einen indogermanischen Kompositionstyp, dessen Hinterglieder aus einer nullstufigen Wurzel und dem Themavokal bestehen, vgl. griech. νεογνός 'neugeboren' < idg. **neuo-ǵn̥(h₁)ó-*, [...] ved. *gopá-* 'Beschützer' < idg. **g^uou-ph₂ó-* 'Rinder schützend'". He therefore hesitatingly suggests a connection between *-lka* and the Hittite verb *lākⁱ* / *lak-* '(act.) to knock out; (midd.) to fall, to be felled' (PIE **leg^h-* 'to lie down'), "dessen semantisches Feld zum Teil auf 'Neigung, Zuneigung, Liebe' (vgl. heth. *lagan-* n. '(Zu-)Neigung' [...]) übergreift" (2010: 85). However, the Hittite noun *lagan-* probably means just 'inclination, disposition',⁴⁴⁶ and has no connotation of 'love' at all.⁴⁴⁷ There is therefore no reason to assume that the verbal root *lāk-* / *lak-* could yield an element having the semantic sphere of 'love'. If *-lka* is indeed cognate with the Hittite verb *lāk-* / *lak-*, it can only have a meaning that has to do with 'falling' or 'having fallen, be lying down'. Since these are not very likely semantics for an onomastic element, it is better to give up a connection between Kanišite *-lka* and Hittite *lāk-* / *lak-*.

Still, I think that Zehnder's idea that *-lka-* may contain the zero-grade of a verbal root is attractive, and would like to offer a suggestion along these lines. As we will see in more detail in section 9.2, the fact that the elements *-ḥšū* and *-ḥšušar* have no vowel between the *ḥ* and the *š*, whereas the Ḫattuša Hittite words to which these elements correspond, namely *ḥaššu-* and **ḥaššuš(ša)ra-*, do have a vowel there (/hás:u-/ and /has:us:rá-/), respectively), shows that in Kanišite Hittite names in unaccented elements under some conditions syncope could take place. This makes it in principle possible that in the element *-lka*, too, syncope has taken place, and that we may have to reconstruct **-lVka*. If so, then a connection with the Hittite verb *lukk^{-tta}* 'to get light, to dawn' (PIE **leuk-*) may be possible. Formally, we would then have to assume that *-lka* is the result of syncope in an earlier sequence **-/luk:-á/*, which seems certainly

446 CHD L: 18: "bent, inclination, disposition(?); HED L: 36: "mindset, disposition(?)".

447 In fact, in KUB 41.8 iv 1 // KBo 10.45 iv 1–2, we read [(*nu* GE₆)]-aš KI-*paš laga(n)=šmit ēp* "O dark earth, restrain their (the evil deities') inclination!" (thus CHD L: 18), which implies that 'inclination' is used here as something bad, certainly not something like 'love'.

possible to me (note that this would mean that *-lka* represents /-lk:á/, with a geminate /k:/). Also semantically, this connection would make good sense, since *-lka* < **-lukk-a* may then mean something like ‘dawn’, ‘the light/bright one’, or similar. Nevertheless, it is clear that this suggestion is nothing more than a possibility: at this point there is nothing that could prove it.

5.2.11 *-mei* (m.)

An element *-mei* is found in ten names, most of which contain an initial element that combines with other Hittitoid elements as well, and therefore seem to be reasonably well embedded in the group of Hittitoid personal names. These names are: *azumei* (g.u.), *inarme* (m.), *šimišmei* (g.u.), *šivašmei* (m.), *šivišmei* (m.), *šupudašmei* (m.), and *šupime* (m.).⁴⁴⁸ Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings. Two other names in *-mei* contain initial elements that are not found with other Hittitoid compound names, so their status is less secure:⁴⁴⁹ *ipmei* (g.u.) and *šuišmei* (g.u.). Nevertheless, because of the specificity of the element *-mei*, I will also treat these names in section 5.3 below.

In all cases where the gender of the person bearing a name in *-mei* can be determined, we are dealing with a man. Interestingly, the element also occurs on its own, namely as the name *mei* (m.),⁴⁵⁰ and possibly also as the initial part of a compound name, namely *meimit* (g.u.)⁴⁵¹ (although a final element *-mit* is unattested in any other personal name).

The element *(-)mei* is consistently spelled *(-)mì-i*, with plene spelling with the sign I.⁴⁵² As discussed in § 3.2.12, this plene spelling points to the presence of a diphthong, /(-)mei/. This reading is supported by the Hittite personal names *išpudašmei*⁴⁵³ and *ṣṣandamei*, which both are spelled *-me-i*,⁴⁵⁴ with a clear diphthong /ei/. Moreover, if we are allowed to compare the initial parts of these names, *išpudaš-* and *šanda-*, to the Kanišite elements *išpud(a)-* and

448 It cannot be excluded, however, that *šimišmei*, *šivašmei* and *šivišmei* in fact represent a single name, cf. the individual treatments of their initial elements in section 5.3.

449 Cf. § 5.3.43 for a treatment of the ghost form *ḫiwašmei*. For alleged *šupurmei*, cf. footnote 681.

450 *me-i* (kt 99/k 138a [1b]: 11; kt 99/k 138b [1b]: rev. 3).

451 *me-i-mì-it* (kt n/k 75: 8). Since this name is attested only once, it cannot be excluded that the spelling with the sign I here does not necessarily indicate the presence of a diphthong, which would mean we should read the form as *mì-i-mì-it*.

452 Once we find the spelling *-mì-e*, however (*i-na-ar-mì-e* (AKT 9a, 8o: 3)), which is probably to be read *-me-e*, and which may just represent a mishearing of underlying /-mei/.

453 Which must be identical to Kanišite *šupudašmei* (m.), cf. its treatment later on in this section.

454 Cf. footnote 127 for attestations.

šad(a)-, which combine with Hittitoid elements, the identification of *-mei* as a Hittitoid element becomes even stronger.

The view that the names in *-mei* are Hittitoid is not shared by Zehnder (2010: 6–7), however. He rather associates them with a group of names that end in *-kuni* (e.g. *apikuni*, *adamakuni*, *elirakuni*, etc.), of which he has convincingly argued that they probably have no connection with the Hittite language (cf. Zehnder 2010: 5 for names and discussion; cf. also section 4.7). This association is based on two arguments. First, Zehnder states that “[w]ie bei *-kuni* sind die meisten Erstbestandteile [of the names in *-mei*] rätselhaft, besonders *Ip-*” (2010: 7). Although it is true that the elements *ip-* and *šuiš-* are not found in any other name,⁴⁵⁵ and therefore could indeed be called “rätselhaft”, this situation is not different from the ones concerning the other Hittitoid elements. For instance, also secure Hittitoid elements like *-ḫšu* or *-nika* are sometimes combined with elements that are not found elsewhere and are therefore likewise “rätselhaft” (e.g. *ipia-ḫšu*, *kida-ḫšu*, *maḫira-ḫšu*, *hamana-nika*). Such names are therefore not very telling. The focus should instead be on the elements that we do find with other Hittitoid elements, of which, in the case of *-mei*, there are enough to make a Hittitoid interpretation likely.⁴⁵⁶

Zehnder's second reason to associate the names in *-mei* with the names in *-kuni* is based on a comparison of their initial elements, which, according to Zehnder, points to an “Anschluss” of the *-mei*-names with the *-kuni*-names (2010: 6). However, Zehnder only mentions two arguments in favour of this statement, which both are weak. The first is a comparison between *šimišmei* and *šimišku[ni]*, which share the element *šimiš-*. However, the name *šimišku[ni]* is attested only once, as *ši-mi-iš-ku[-...]* (ICK 4, I 674: 6), and the reading of this name as *šimišku[ni]* is, as far as I know, not based on any good evidence. In fact, since *šimišku[...]* is a woman's name,⁴⁵⁷ whereas all other personal names ending in *-kuni* are men's names,⁴⁵⁸ it seems odd to assume that this name ended in *-kuni*. It is more likely that it should be read *šimišku[nien]*, cf. the existence of the woman's name *šimiškunien* in kt 88/k 971.⁴⁵⁹ This name therefore cannot be used to prove a connection between the names in *-mei* and the names in *-kuni*. Zehnder's second argument is a comparison between the names *šupimei* and *šupikuni*. These indeed share the element *šupi-*, but, as

455 Zehnder also cites the name *ḫiwašmei*, but this probably did not exist, cf. § 5.3.43.

456 In the case of the names in *-kuni*, the situation is indeed different, cf. the discussion in section 4.7.

457 She is mentioned as the wife of a man called *pirua*.

458 Cf. the list in Zehnder 2010: 5. The only exception is *šupikuni* (f.), but this name may have to be read differently, cf. section 4.7, the paragraph on *-kuni*-names.

459 Cf. § 5.3.125 below at the treatment of the element *šimiš-*.

will be argued in more detail below, it is exactly *šupi-* that is a very well attested element in securely Hittitoid compound names. It is therefore remarkable to use the name *šupimei* as an argument against a Hittitoid interpretation of the names in *-mei*. Moreover, the status of the name *šupikuni* (KTH 20: 2) is unclear: it probably is to be read *šupimani*, cf. its treatment in section 4.7.

All in all, Zehnder's reluctance to interpret *-mei* as a Hittitoid element is unfounded. However, finding a good comparison between Kanišite *-mei* and a Hittite suffix or lexeme is not easy. Alp (1950: 125–6) compared the name *šīwašmei* with Old Hittite *ḫšiušmiš* (KBo 3.22 rev. 47),⁴⁶⁰ and interprets the Kanišite name as “Hittite *šīua-* “god” + *-šmi* “your” or “their”” (1952: 252¹⁴). This does not do justice to the fact that the latter element is in fact *-mei*, not *-šmei*. Nevertheless, since nowadays Hitt. *ḫšiušmiš* is analysed as *ḫšiuš=miš* ‘my god’, containing the 1sg. possessive pronoun *=mi-* / *=me-* / *=ma-*, Alp's analysis of *šīwašmei* could be rewritten as *šīwaš* ‘god’ + *-mei* ‘my’. However, the fact that *mei* occurs as an independent name as well is not favourable to this interpretation. The comparison is therefore best forgotten.

A clue to the interpretation of *-mei* is formed by the Kanišite name *šupudašmei*, which must be identical to the name *išpudašmei* that is known from Hittite texts. Their initial element reminds of the initial element of Kanišite *išpudaḫšu* / *šupudaḫšu*, which can be analysed as *išpud(a)-* / *šupud(a)-* + *-ḫšu*.⁴⁶¹ If the initial elements of the two name pairs can be compared, it means that in *išpudašmei* / *šupudašmei* an extra element, *-(a)š-*, is found between the initial element *išpud(a)-* / *šupud(a)-* and the final element *-mei*. Thus far, we have not seen a linking element *-(a)š-*, but we seem to find a parallel to it in three Hittite names, namely *ḫaššūuaš-inar*, *ḫiṣpudaš-inar*, and *ḫpešnaš-inar*, of which especially *ḫiṣpudaš-inar* is relevant. All three names show peculiar spellings, namely *ḫa-aš-šu-ua-aš-i-na-ar*,⁴⁶² *ḫiṣ-pu-da-aš-i-na-ar*,⁴⁶³ and *ḫpé-eš-na-aš-i-na-ar*,⁴⁶⁴ respectively, i.e. with a broken spelling *-aš-i-*. This may indicate that these names are recent univerbations of the elements *ḫaššūuaš*, *iṣpudaš* and *pešnaš*, respectively, with the element *inar* attached to them.⁴⁶⁵ The elements *ḫaššūuaš* and *pešnaš* are within Hittite transparently analysable

460 Thus also Kronasser 1959: 65 (with a different analysis); Tischler 1995: 363.

461 Cf. § 5.3.61.

462 *ḫa-aš-šu-ua-aš-i-na-ar* (StBoTB 4.11, 29), *ḫa-aš-šu-ua-aš-[i-na-ar]* (StBoTB 4.17, 11).

463 Nom.sg. *ḫiṣ-pu-da-aš-i-na-ra-aš* (KBo 3.34 iii 15), *ḫiṣ-pu-da-aš-i-na-ar-aš* (*ibid.* 28), acc.sg. *ḫiṣ-pu-da-aš-i-na-ar-an* (NB the broken spelling of the ending!) (*ibid.* 21), dat.-loc.sg. *ḫiṣ-pu-ta-aš-i-na-ri* (*ibid.* 18).

464 *ḫpé-eš-na-aš-i-na-ar* (StBoTB 4.40, 7).

465 This seems to be implied already by Laroche's rendering of the attestations of *ḫiṣpudašinar* as “*ḫiṣ-pu-da-aš-i-na-ar*”, with capitalization of the element *inar* (Laroche 1966: 81).

as gen.sg. forms of the words *ḥaššu-* ‘king’ and *pešn- / pišen-* ‘man, male person’. This implies that the names ^m*ḥaššuṣaš-inar* and ^m*pešnaš-inar* go back to original syntagms meaning ‘*inar* of the king’ and ‘*inar* of the man’, respectively. This means that *išpudaš* in ^m*išpudaš-inar* may be an original gen.sg. form as well, and, as a consequence, we may now analyse *išpudaš-mei* / *šupudaš-mei* as consisting of a similar construction: ‘*mei* of the *išpud-* / *šupud-*’. In this light, it can be no coincidence that both *inar* and *mei* are in the Kanišite material attested as independent names as well.

If this analysis of *išpudašmei* / *šupudašmei* is correct, we may extend such an analysis to *šivašmei*, which may then mean ‘*mei* of the *šiw-*’. Since, as will be argued § 5.3.61, Kanišite *išpud-* / *šupud-* may be connected with Hitt. ^(d)*išpant-* ‘(god of the) night’ and Kanišite *šiw-* with Hitt. ^(d)*šiu-* ‘god (of the day)’, the two names may mean ‘*mei* of the night(-god)’ and ‘*mei* of the (day-)god’, respectively, which adds to the attractiveness of the analyses.

If the interpretation of all these names (*išpudaš-mei* / *šupudaš-mei*, *šivaš-mei*, ^m*ḥaššuṣaš-inar*, ^m*išpudaš-inar*, and ^m*pešnaš-inar*) as recent univerbations of gen.sg. forms + the names *mei* and *inar*, respectively, is correct, we may assume that the names *mei* and *inar* have a comparable origin. Since *inar* is generally seen as being identical to the Hattic theonym ^d*inar* (cf. its treatment in § 5.3.58), we may assume that *mei* originally was a theonym as well. However, as far as I am aware, a deity of the name *mei* is unattested anywhere, and this analysis therefore must remain hypothetical.

5.2.12 *-nika* (f.)

An element *-nika* is found as a final element in sixteen names, seven of which contain an initial part that also occurs with other Hittitoid elements, and which can therefore securely be regarded as Hittitoid: *aškunanika* / *iškunanika* (f.), *ḥapuanika* (f.), *iatanika* (f.), *šamnanika* (g.u.), *šašanika* (f.), *šu²minika* (g.u.),⁴⁶⁶ and *šupianika* (f.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

As we see, in all cases where the gender of the person bearing a name ending in *-nika* can be determined, we are dealing with a woman.⁴⁶⁷ This also goes for the names in *-nika* that are attached to an initial element that is not found in other names. Because of the specificity of the combination of *-nika* and feminine gender, these names clearly belong with the securely Hittitoid

466 Cf. Zehnder 2010: 276–7 for a discussion of the gender of the person carrying this name.

467 Note that the men’s name *šarnika* clearly does not belong with this group of names, but is rather cognate with the men’s names *šarnikan* and *šarnikat*, which will be treated in § 5.3.122.

ones, and I regard them as securely Hittitoid, too. These names are: *ewanika* (g.u.), *ḥamananika* (f.), *ḥašušarnika* (f.), *ianika* (g.u.), *lapadanika* (f.), *maḥanika* (f.), *muḥanika* (g.u.), *šaptamanika* (f.), *tamnanika* (f.), and *watruanika* (f.). Their initial elements will therefore be treated in section 5.3 as well, where also discussions of these names, including attestations and possible meanings, can be found.

The element *-nika* is consistently spelled *-ni-kà*. Since the sign NI can in principle be read *lí* as well, some scholars have suggested to read the element as *-lika*.⁴⁶⁸ At first sight, this reading seems to be supported by the existence of a woman's name spelled *ša-ša-li-kà*, with the sign LI, which can then be seen as a variant of the woman's name spelled *ša-ša-NI-kà*, pointing to an interpretation *ša-ša-lí-kà* for the latter. However, a computerized search of all Old Assyrian texts from Kaniš as available in the CDLI database (5,105 texts) has shown that in these texts the syllable /li/ is spelled with the sign LI some 5,100 times, and with the sign NI = *lí* some 1,500 times, giving a ratio of 77% LI vs. 23% NI. If the element under consideration would have been *-lika*, we therefore may expect that it, too, would have been spelled with the sign LI in 77% of its occurrences, and with the sign NI in only 23% of its occurrences. However, in my database of Kanišite names, I find 47 attestations spelled *-NI-kà*, but only 6 times the spelling *-LI-kà*,⁴⁶⁹ pointing to a completely different ratio, namely 11% LI vs. 89% NI. Moreover, of these six attestations with the sign LI, five occur on a single tablet plus envelope (TC 3, 214 [1b]) in order to spell the name *šašalika*, and one on a different tablet to spell the name *šišalika*.⁴⁷⁰ Since the initial elements *šaš(a)-* and *šiš(a)-* are probably variants of each other (cf. § 5.3.123), we are effectively dealing with only a single name that shows spellings with *-LI-kà* besides spellings with *-NI-kà* (*ša-ša-NI-kà*), whereas all other names are consistently spelled *-NI-kà*. This distribution is so different from the overall distribution between the signs LI and NI in the spelling of the syllable /li/, that it seems out of the question that the spelling *-NI-kà* should be read *-lí-kà*. It is instead better to assume that *-NI-kà* spells *-nika* and needs to be separated from the spelling *-LI-kà*, which represents *-lika*.⁴⁷¹ The fact that the name *ša-ša-LI-kà* / *ši-ša-LI-kà* now cannot be equated with *ša-ša-NI-kà* is only a small sacrifice: we have seen above that *šašalika* / *šišalika* may be a

468 Bilgiç 1954: 16³⁴; Matouš 1973: 311.

469 I did not count the names *ḥa-li-kà* (kt r/k 19: 22) and *kà-li-kà* (kt n/t 2100: 18), because in both cases their gender cannot be determined, and in both cases an analysis as a compound name is not self-evident.

470 Cf. footnote 843 for an overview of attestations of these names.

471 Thus also Zehnder 2010: 87, on the basis of different arguments.

variant of the name *šašalka* (the *-l-* of which is assured), and thus has nothing to do with the names ending in *-nika*.

Although in many of the names ending in *-nika* this element is preceded by an *a*, the names *ḥašušarnika* and *šuʾminika*, in which such an *a* is absent, indicate that the *a* that is present in the other names either belongs to the first element of the name, like in *šaptama-nika*(?), or is a linking *-a-*, like in *šupi-a-nika* (cf. section 5.1 above).

According to Goetze (1954a: 353), the woman's name *ʿar-na-ni-ga* as attested in a Middle Babylonian text from Alalaḥ (AT 298 iv 16) may belong to these Kanišite names in *-nika* as well. This is indeed an interesting suggestion, since we could then analyse the name as *arna-niga*, the initial part of which may be compared with the Kanišite Hittitoid element *arn(a)-* that is found in the man's name *arnuman* (cf. § 5.3.9). The spelling of this name with the sign GA may be relevant, since in Alalaḥ Akkadian the sign GA was in principle kept distinct from the sign KA, the former spelling the syllable /ga/, and the latter denoting /ka/.⁴⁷² The Alalaḥ spelling *ʿar-na-ni-ga* may therefore indicate that the Kanišite element *-nika* in fact contained a voiced stop [g].⁴⁷³

It was Laroche (1966: 308) who first compared the element *-nika* with the Hittite lexeme *nēka-*. At that time it was only known that *nēka-* denotes “une parenté féminine ou un nom d'état féminin”, but nowadays it has been established that it means ‘sister’.⁴⁷⁴ This comparison has generally been accepted,⁴⁷⁵ and this is indeed semantically attractive: a name like *šupianika* could then mean ‘pure sister’ (thus Neumann 1974: 279). Formally, it fits well, too. The Hittite noun *nēka-* can phonologically be interpreted as /néka-/,⁴⁷⁶ which

472 Cf. Kloekhorst 2010a: 237 (but note that this article deals with the spelling principles of texts from Alalaḥ level VII (Old Babylonian), and not with those of texts from Alalaḥ level IV (Middle Babylonian), so it cannot be excluded that the spelling conventions had shifted through time).

473 According to Goetze (1954a: 353), the Kanišite element *-nika* may also be found in the woman's name *ʿšu-šu-ma-an-ni-ga* as found in Ḥattuša (KUB 7.1 iv 5; KUB 30.48 obv. 15; KUB 30.49 iv 12). He uses this name as an argument that *-nika* must have contained a geminate *-nn-* (e.g. “*Iatannika*”). However, the presence of a geminate *-nn-* contradicts the single spelling of *-n-* in *ʿarnaniga* as found in Alalaḥ, where geminate consonants are in principle always written as such. Since the initial element of *ʿarnaniga* matches the Kanišite element *arn(a)-*, whereas the initial element of *ʿšušumanniga* (which is compared by Goetze to the first part of the Hurrian theonym *ʿšušumāḥi*) has no parallel in Kanišite names, I take *ʿarnaniga* as the true cognate to the Kanišite names in *-nika*, indicating that its *n* was single. Likewise Zehnder (2010: 87, 125), who states that *ʿšušumanniga* “besser fernzuhalten [ist]”.

474 Cf. CHD N: 425.

475 E.g. Neumann 1974: 279; Tischler HEG N: 300; Zehnder 2010: 88.

476 Cf. Kloekhorst 2014: 101.

was probably pronounced [né-ga].⁴⁷⁷ Since the Old Assyrian script did not consistently distinguish between the vowels *e* and *i*, nor between voiceless and voiced stops, the Kanišite spelling *-ni-kà* can certainly be interpreted as */-neka/* = [-nega] (cf. the Alalah spelling *-ni-ga* that confirms the presence of [g]). We may therefore regard the equation between Kanišite *-nika* and Hittite *nēka* ‘sister’ as highly likely.

5.2.13 *-uman* / *-umen* (m.)

The element *-uman* is the most prolific element in Kanišite names, occurring in more than seventy of them. In fourteen of these names, the element *-uman* is attached to an element that also combines with other Hittitoid elements, and these names can therefore be regarded as securely Hittitoid: *ašu’uman* (m.), *atuman* (m.), *ḫaršumnuman* / *ḫaršunuman* (m.), *ḫatuman* (g.u.), *ḫištuman* (m.), *ilaliuman* (m.), *išpunuman* / *šupunuman* (m.), *mariuman* (g.u.), *nakiuman* (m.), *šakriuman* / *šikriuman* (m.), *šamnuman* / *šimnuman* (m.), *šivanuman* (g.u.), *šumiuman* (g.u.), and *šupiuman* (m.). Cf. the treatments of the initial elements of these names in section 5.3 for their attestations and possible meanings.

In all cases where the gender of the person bearing one of these names can be determined, we are dealing with men. This also goes for the more than fifty other names that end in *-uman*, and I therefore regard these as very likely Hittitoid as well: *akaliuman* (m.), *arḫanuman* (g.u.), *arnuman* (m.), *elaniuman* (g.u.), *ḫašiuman* (g.u.), *ḫašu’uman* (m.), *ḫiluman* (g.u.), *ḫupišnuman* (g.u.), *ḫurluman* (m.), *ḫuršunuman*(?) (g.u.), *ḫušiliuman* (g.u.), *ḫušiuman* (m.), *ḫuziuman* (g.u.), *iḫiliuman* (g.u.), *kapium[an]* (g.u.), *kapuiuman* (g.u.), *kapu’uman* (g.u.), *kapuwuman* (g.u.), *karašuman* (g.u.), *kipu’uman* (m.), *kuluman* (g.u.), *kušuman* (g.u.), *lawatuman* (m.), *liḫšuman* (g.u.), *luḫatuman* (g.u.), *parualiuman* (m.), *šaḫišnuman* / *šiḫišnuman* (m.), *šalinuman* (g.u.), *šariuman* (m.), *šiliuman* (m.), *šununuman* (g.u.), *šupianuman* / *šupienuman* (m.), *šupišamnuman* (g.u.), *šupiunuman* (g.u.), *takšanuman* (g.u.), *taliuman* (g.u.), *tiliuruman* / *tiliwaruman* (m.), *tizaruman* (g.u.), *uliliuman* (m.), *upu’uiuman* (g.u.), *uranuman* (m.), *ušinuman* / *ušnuman* / *wašinuman* (m.), *ušušnuman* (g.u.), *utunuman* (g.u.), *wašuḫuruman* (m.), and *zupanuman* (m.). Their initial

477 Cf. Kloekhorst 2014: 182 for the idea that in Hittite a phonological short accented /é/ is in open syllables pronounced as a half-long [é̄]. Cf. Kloekhorst fthc.a for the concept that intervocalic lenis stops, which phonologically were voiceless, in intervocalic position were realized as voiced stops.

elements will therefore be treated in section 5.3, where discussions of these names, including attestations and possible meanings, can be found as well.⁴⁷⁸

As was briefly discussed above (§ 4.3.2), already Landsberger (1924: 226) and Goetze (1931) equated Kanišite *-uman* with the Hittite suffix *-umen-* / *-umn-*.⁴⁷⁹ This equation is attractive, for several reasons.

First, as Goetze (1931) shows, some of the elements that in the Kanišite names precede *-uman* are identical to geographical names. He mentions as examples *akaliūman* ~ ^{URU}*akaliḫa*, *arnuman* ~ ^{URU}*arana*,⁴⁸⁰ and *tiliuruman* ~ ^{URU}*tiliura*.⁴⁸¹ Other interesting cases are *ḫaršumnuman* ~ ^{URU}*ḫaršumna*, *ḫašu'uman* ~ ^{URU}*ḫaššuḫa*, *ḫupišnuman* ~ ^{URU}*ḫupišna*, *ḫurluman* ~ ^{URU}*ḫurla*, *liḫšuman* ~ ^{URU}*liḫša* or ^{HUR.SAG}*liḫša*, and *takšanuman* ~ ^{URU}*takšana*. This is fully parallel to the way in which Hitt. *-umen-* / *-umn-* is mainly used: it almost exclusively forms derivatives of toponyms, like ^{LÚ}*nešumen-* '(person) coming from Nēša'.

Second, whenever *-uman* is combined with an initial element that in other compound names ends in an *a* (whether that *a* belongs to that element itself

478 Goetze (1931: 261) includes in his list of names ending in *-uman* the name *šitaraman* (*ší-ta-ra²-ma-an* (KTS 1, 51b: 18)), as well. However, since none of the other names in *-uman* are ever spelled *-aman*, it seems clear to me that *šitaraman* does not belong here. The same goes for the name *ta-wa-ú-i-ma-an*, which is cited by Bilgiç (1945–1951: 26; referring to an unpublished text) and Goetze (1954a: 351, following Bilgiç) as belonging to the *-uman*-names. Again, since none of the real *-uman*-names ever shows a variant in *-iman*, *tawauīman* can hardly belong here. Note that Goetze (1954a: 351) also cites a name “*Ú-šu-nu-ma(-an)*” for ICK 1, 35b: 10 (the addition of *-an* is confirmed by the corresponding envelope, ICK 1, 35a, where in line 1 we read KIŠIB [...]-*ma-an*), but this name in fact reads *ú-šu-na-ma<-an>*, i.e. with the sign NA instead of NU. It thus does not belong to the group of names in *-uman*.

479 Note that e.g. Landsberger (1924: 226), Goetze (1931) and Bilgiç (1945–1951: 2–3) cite the suffix as *-uman* / *-umna*. This latter shape is based on the name *tunumna*, which Landsberger analysed as “der Mann von Dunna”. However, this can hardly be correct. If *tunumna* would really contain the same suffix as the other names in *-uman*, I would expect that it would occur as ***tunuman* as well, but this is never the case: it is always spelled *tù-nu-um-na* (BIN 4, 208e: 4, 6; BIN 4, 208t: 3 (*tù-nu-um-na-áš*); Chantre 2: 15; CCT 1, 8b: 15; TC 1, 87: 3, 16; kt m/k 103). Conversely, the names in *-uman* always end in *-uman*, and never show a by-form in ***umna*. There is therefore no evidence for regarding *tunumna* as belonging to the group of names ending in *-uman*, and the postulation of a by-form *-umna* besides *-uman* is therefore incorrect.

480 Although the spelling of this toponym, ^{URU}*a-ra-na-*, clearly points to a form /*arana-*/, with an /*a*/ between *r* and *n*, which is absent in Kanišite *arnuman*. The comparison is therefore rather weak.

481 He also compares the Kanišite name *šitaraman* to the toponym ^{URU}*aštira-* (1931: 261), but note that *šitaraman* does not end in *-uman* (cf. footnote 478), and that the toponym ^{URU}*aštira-* does not exist, but is rather ^{URU}*ḫaštira-*. This comparison is therefore best left out of consideration.

or is a linking *-a-*), this *a* is lost before *-uman*. For instance, *ḫišta-ḫšu*, *ḫišta-ḫšušar*, but *ḫišt-uman*; *ilalia-ḫšu*, *ilalia-lka*, but *ilali-uman* (cf. also the existence of the independent name *ilalia*); etc. This is exactly parallel to the behaviour of Hitt. *-umen-* / *-umn-*, which also causes its preceding part to drop its *a*, e.g. ^{URU}*ḫattuša*, but ^{URU}*ḫattuš-umen-* ‘coming from Ḫattuša’; ^{URU}*lūia*, but ^{URU}*lūi-umen-* ‘coming from Luwiya’; etc.

Third, the Hittite suffix *-umen-* / *-umn-* is used in personal names as well, the best known of which is ^{mš}*uppiluliuma*, litt. ‘coming from Šuppiluliuma’.⁴⁸²

Fourth, as was mentioned in section 1.5, the Kanišite name *ilaliuman* can be equated with the name ^m*ilālium(m)a* as attested in texts from Ḫattuša,⁴⁸³ and the same goes for the Kanišite name *šupiuman* and the Ḫattuša name ^{mš}*uppiuman*.⁴⁸⁴ In both cases, the Ḫattuša names are spelled *-u-ma(-an)*, i.e. with the sign U, of which it has relatively recently become clear that it spells the vowel [o].⁴⁸⁵ This means that the Ḫattuša names are [ilālioma] and [sup:ioman], respectively. The Kanišite names are spelled with the sign Ū, however (*i-lá-li-ú-ma-an*, *šu-pi/pí-ú-ma-an*),⁴⁸⁶ which in principle represents the sound [u]. However, as has been explained in Chapter 3, we may assume that the Old Assyrian orthography did not make a distinction between the vowels [o] and [u], which makes way to interpreting the Kanišite spellings *i-lá-li-ú-ma-an* and *šu-pi/pí-ú-ma-an* as representing /ilālioman/ and /sop:ioman/,⁴⁸⁷ respectively, with an /o/. Also the Hittite suffix *-umen-* / *-umn-* must have contained an /o/, as is clear from spellings like ^{URU}*ḫa-aš-šu-u-ma-aš* /has:omas/ (or /has:uomas/?) ‘coming from Ḫaššuua’, ^{URU}*za-al-pu-u-ma-aš* /tsalpomas/ ‘coming from Zalpa’, and ^{URU}*lu-ú-i-u-ma-na-aš* /lūiomanas/ ‘coming from Luwiya’.

482 As far as I am aware, the only Hittite inflected form that is attested for this name is nom.sg. ^{mš}*uppiluliumaš*, which is regular for a stem in *-umen-* / *-umn-* (with **-umen-* + *-s* > **-umans* > *-umaš*), but could in principle also fit an *a*-stem noun. The fact that in akkadographic constructions in which this name is used (which form the majority of attestations), the stem form ^{mš}*uppiluliuma* is used, may indicate that in Hittite the name had been reinterpreted as an *a*-stem noun.

483 ^m*i-la-a-li-u-ma* (StBoTB 4.28, 24 (MH/MS), StBoTB 4.29, 24 (MH/MS)), [^m*i-la*]²-*a-li-u-ma* (StBoTB 4.9 obv. 7 (MH/MS)), [^m*i-la-a-li-u-ma* (StBoTB 4.36, 5 (MH/MS)), ^m*i-la-li-u-ma* (KUB 3.89 + KBo 1.27 i 13 (OH/undat.)), [^m*i-l[a]-a-li-u-ma* (*ibid.* ii 2 (OH/undat.)) (cf. Hoffmann 1984: 60 for this reading)). For the explanation why this name ends in *-uma* and not *-uman*, cf. the discussion of Hittite ^{mš}*uppiluliuma* in the preceding footnote. The occasional geminate spelling *-mm-* is a feature of younger Hittite, and has no bearing on the original phonetics of this name.

484 ^{mš}*u-up-pí-u-ma-an* (KBo 3.34 ii 22 (OH/NS)), ^{mš}*u-up-pí-um-ni* (*ibid.* 24 (OH/NS)).

485 Cf. Rieken 2005; Kloekhorst 2008: 35–60.

486 Cf. footnotes 657 and 882 for attestation places.

487 Cf. § 5.3.136 for the /o/ in the element /sop:i-/.

This is therefore an additional argument in favour of equating Kanišite *-uman* with Hitt. *-umen-* / *-umn-*.

Fifth, we once find the man's name *šaḫišunumin*,⁴⁸⁸ which is reminiscent of the men's name *šaḫišnuman*.⁴⁸⁹ If we are allowed to equate the initial parts of these names (*šaḫišn-* and *šaḫišun-*),⁴⁹⁰ we may conclude that *-uman* had a variant *-umin*. In Hittite, three allomorphs of the suffix *-umen-* / *-umn-* are attested, namely *-uma(n)-* (in nom.sg. *-umaš*), *-umen-* (in nom.pl. *-umen-eš*, but originally also in acc.sg. **-umen-an*⁴⁹¹), and *-umn-* (in dat.-loc.sg. *-umn-i*).⁴⁹² Since in the Old Assyrian script no systematic distinction is made between /i/ and /e/ in CV- and VC-signs, it is possible to read the spelling ^o*u-mi-in* as /-omen/, which could then be seen as identical to the Hittite allomorph *-umen-* = /-omen-/. The shared allomorphy between the Kanišite element (*-uman* and *-umen*) and the Hittite suffix (*-uma(n)-* and *-umen-*) is a convincing additional argument in favour of their equation.

On the basis of these arguments we can regard the equation between Kanišite *-uman* / *-umen* and Hittite *-umen-* / *-umn-* as certain. Etymologically, Hitt. *-umen-* / *-umn-* can be equated with CLuw. *-uann(i)-*, HLuw. *-wan(i)-*, Lyc. *-ñn(i)-* and Mil. *-wñn(i)-*, which all are suffixes of (geographic) appurtenance as well. Together, they point towards a PAnat. shape **-ḡuén-* / **-ḡun-*, which can be compared with Skt. *-van-* / *-vn-* and Gr. *-ᾱον-* 'belonging to' < PIE **-h₂uén-* / **-h₂un-*.⁴⁹³ This suffix probably inflected hysterodynamically, i.e. nom.sg. **-h₂uén(-s)*, acc.sg. **-h₂uén-m*, gen.sg. **-h₂un-és*. This implies that the accent in this formation in principle never fell on the stem from which it was derived. This situation seems to also be present in the Kanišite names. Consider, for instance, the name *ḫištuman*. Since its initial part, *ḫišt(a)-*, in other names has a variant *ḫašt(a)-*, we can analyse it as representing an underlying form /hst(a)-/. This means that *ḫištuman* represents /hstoman/. The absence of vowels in the initial part of this name implies that the accent fell on the suffix, /hstomán/, which perfectly fits its etymology.

It should be noted that, although the connection between Kanišite *-uman* / *-umen* and the Hittite 'ethnicon suffix' *-umen* / *-umn-* can be regarded as certain, this does not necessarily mean that every Kanišite element that combines with *-uman* is automatically a toponym. Consider cases like *ilaliuman*, *nakiuman*,

488 Cf. footnote 814 for its place of attestation.

489 Attested multiple times, cf. footnote 813.

490 Cf. § 5.3.113.

491 Cf. Oettinger 1982: 170–7.

492 Cf. Kloekhorst 2008: 914–5.

493 Cf. Kloekhorst 2008: 914–5.

šupiuman, etc., where the initial elements are connected with Hittite *ilālije/a*⁴⁹⁴ ‘to desire’, *nakki*- ‘important’, and *šuppi*- ‘pure, sacred’, respectively.⁴⁹⁴

5.3 The Initial Elements of the Kanišite Hittite Compound Names

After having treated the final elements of the Kanišite Hittite compound names, it is now time to turn to their initial parts. Of each element it will be discussed with which final element it occurs, how its spelling can be phonologically interpreted, and whether a Hattuša Hittite comparandum can be found, which may yield a possible meaning for the names in which these elements are found.

5.3.1 *a’a-*

This element is only found in the name written *a-a-aḫ-šu* (m.).⁴⁹⁵ The hyperplane spelling *a-a-aḫ-* is interesting, and as far as I know unparalleled in the corpus of Kanišite personal names. From an Old Assyrian point of view, such a spelling must be interpreted as a disyllabic sequence in which a weak consonant (? or *y*) is present between the two vowels.⁴⁹⁶ For *a-a-aḫ-šu*, this means that we could interpret it as [aʔa-hsu] or [aya-hsu], but neither of these yields an evident Hittite comparandum.

5.3.2 *akalia-*

This element only occurs in the name *akaliuman* (m.).⁴⁹⁷ As was argued already by Goetze (1931: 260–1), *akali(a)-* may be compared with the city name

494 Therefore, the list of toponyms as presented by Dercksen 2014: 198, which contains many cases that are solely based on names ending in *-uman*, should be used with care. Their status as a toponym can only be ascertained when independent evidence in favour of such an analysis is found.

495 *a-a-aḫ-šu* (CCT 1, 34a: 12; kt 87/k 39: 12). Note that the name as found in CCT 1, 34a is often cited as *a-a-aḫ-šu-nu* (thus e.g. Hecker aATU, CDLI, OAPD (“Ayahšunu”)), but this is probably wrong: at the end of line 12 we clearly read *a-a-aḫ-šu*, but below the sign ŠU there are two wedges that do not belong to line 13, and are therefore assumed to form a sign NU that then should follow the ŠU of line 12, yielding the name *a’ahšunu* (thus CCT 1: 19). To my mind, however, the wedges that are drawn on the hand copy of this text do not really justify a reading NU (collation is needed). Moreover, since the name *a-a-aḫ-šu* is found thus on kt 87/k 39, it seems evident to me that in CCT 1, 34a we should read *a-a-aḫ-šu* as well.

496 Cf. Kouwenberg 2017: 40.

497 *a-kà-li-ú-ma-an* (AKT 10, 54a: 6; CCT 1, 7a: 3). The name spelled *a-kà-al-ú-ma-an* (m.) (AKT 10, 17a: 20; AKT 10, 17b: 4) probably is the same as *akaliuman*, with the broken spelling *-al-ú-* representing */alyu-/* (cf. Kouwenberg 2017: 40 for this possibility).

^{URU}*akaliija*-, which is also spelled ^{URU}*ankaliija*-.⁴⁹⁸ Note that the loss of the word-final *a* of ^{URU}*a(n)kaliija*- would be regular in front of the element *-uman* (cf. § 5.2.13). We therefore may analyse the name *akaliuman* as representing an underlying /ankaliomán/ ‘(man) coming from Ankaliija’.

5.3.3 *ali(a)-*

This element is only found in the name *aliaḫšušar* (f.[?]),⁴⁹⁹ which is attested only once. Formally, one may think of a connection with Hitt. ^{SIG}*ali*- ‘wool’, but this is semantically not very evident. Alternatively, one may assume that *aliaḫšušar* should be equated with *eliaḫšušar*, see § 5.3.27.

5.3.4 *alum(i)(a)-(?)*

This element is only found in the name that is spelled *a-lu-um-a-aḫ-šu* (m.) (OIP 27, 15: 31). The broken spelling in *-um-a-* may represent the presence of one of the weak consonants *ʔ*, *y* or *w* (cf. Kouwenberg 2017: 29–30, 40–1 for discussion), which would point to *-umʔa-*, *-umya-* or *-umwa-*. I know of no Hittite comparandum for *alumʔ(a)-*, *alumpy(a)-*, or *alumw(a)-*, however. Note that Stamm (1939: 285) interprets this name as Assyrian, translating “Wo ist sein Bruder?”. This may have some merit since on an Old Assyrian tablet from Boğazköy (KBo 9.9) we come across the phrase DUMU ša *a-lu-ma-aḫ-ši* ‘the son of Alumaḫši’, in which the name *alumaḫši* seems to be an Assyrian inflected form of *alumaḫšu* (cf. Dercksen 2001: 51⁶⁷ for a possible equation between these two names). However, since the latter does not show broken spelling, this cannot be ascertained. All in all, it must remain unclear whether *a-lu-um-a-aḫ-šu* is a Hittitoid name or not.

5.3.5 *amuna-*

This element is only found in the name *amunaḫšu* (m.), which is attested only once.⁵⁰⁰ It may be identical to the name *amuna* (m.),⁵⁰¹ which would yield for *amunaḫšu* a meaning ‘(male) child of Amuna’, “Amuna-born”. In Hittite texts from Ḫattuša we find references to several individuals, including an Old Hittite king, who are called ^m*ammuna*.⁵⁰² The Hittite spelling with geminate

498 Cf. Del Monte & Tischler 1978: 17.

499 *a-li-a-aḫ-šu-šar* (AKT 8, 209b: 2). Cf. Veenhof 2017 (= AKT 8): 300 for the idea that, together with *išḫašara* (*ibid.*), *aliaḫšušar* forms a couple, which makes it likely that *aliaḫšušar* is a woman.

500 *a-mu-na-aḫ-šu* (kt 87/k 382: 20).

501 *a-[m]u²-na* (kt 89/k 367 [1b]: 27). Two more attestations of “Amuna” are cited by OAPD for the unpublished texts kt f/k 178 [1b] and kt §/k 8.

502 Cf. Laroche 1966: 30.

-*mm*- indicates that the Kanišite name probably contained a long /-m:/ as well: /am:una-/.

The origin of this name is unclear, but it is interesting that it is formally identical to the toponyms ^{URU}*ammuna*⁵⁰³ and ^{HUR.SAG}*ammuna*,⁵⁰⁴ and we therefore may assume that the personal name *ammuna* was taken after one of these.

5.3.6 *apizia-*

This element occurs in two names, namely *apiziašu* (m.)⁵⁰⁵ and *apiziaḫšu* (m.)⁵⁰⁶. It was already Laroche (1951: 107; 1966: 298) who connected it with the Hitt. adjective *appēzziā-* ‘backmost, last’, a connection that is followed by e.g. Landsberger (1954: 123), Goetze (1954a: 356), Puhvel (HED 3: 245) and Zehnder (2010: 73), and is indeed convincing (note that in Old Assyrian orthography, *i* may stand for /e/, cf. § 3.1.3). In Hittite, *appēzziā-* represents an underlying form /əp:ētsia-/,⁵⁰⁷ and we can therefore analyse the names *apiziašu* and *apiziaḫšu* as /əp:ētsiās:u/ ‘last-beloved’ and /əp:ētsiāhsu/ ‘last-born’, respectively.

In TC 1, 99: 5, we come across the man’s name *a-pá-zi-a-šu*, of which it is unclear to me whether we should equate it with *apiziašu*.⁵⁰⁸

5.3.7 *arawa-*

This element occurs in the names *arawaḫšu* (g.u.)⁵⁰⁹ and *arawan* (m.)⁵¹⁰. It is generally viewed as being identical to the independent name *arawa* (m.)⁵¹¹. It was Alp (1952: 252) who was the first to connect *arawa*(-) to the Hittite adjective *arāḫa-* ‘free’,⁵¹² which makes excellent sense semantically. We therefore

503 On the basis of the Hattic ethnicon ^{URU}*am-mu-na-a-il* (VBoT 68 ii 19).

504 Cf. Del Monte & Tischler 1978: 14.

505 *a-pí-zi-a-šu* (AKT 10, 30a: 16; AKT 10, 30b: 3), *a-pì-zi-a-šu* (TC 3, 252: 1; ICK 4, I 557: 2).

506 *a-pi-zi-ah-šu* (KKS 31b: 2).

507 Cf. Kloekhorst 2014: 43.

508 Landsberger 1954: 123²⁷² cites a name *a-pu-zi-a-a[h-šu]* (KTS 1, 45b: 9), which he connects to the names that start in *apizia-*. However, the reading of the last part of this name is unclear. Collation by Larsen and Hecker produced *a-pu-zi-a-[x]* (cited in OAPD as “Abuzia”), and we may therefore compare the name *a-pu-zi-a* as attested in TMH 1, 22b: 16.

509 Cited by Bilgiç (1945–1951: 3⁸) as “*Arawaḫšu*” for the unpublished texts “Unv. C 35”: 9 and Kayseri 2: 4. Note that according to Dercksen (in his unpublished collection of personal names, cf. the beginning of Chapter 1) the former of these texts rather contains the name *a-ru-wa-aḫ-šu* (cited for “C 35: 9”).

510 *a-ra-wa-an* (Kayseri 316: 4).

511 *a-ra-wa* (AKT 8, 187: 4; ATHE 45: 20; BIN 4, 195: 5; kt c/k 681: 9; kt 94/k 282: 5 (courtesy Barjamovic); kt 94/k 401: 23 (courtesy Barjamovic)). On kt 88/k 173: 5 we find the name *a-ra-wa-áš*. Since it stands after DUMU, it may represent a Hittitoid genitive form in -(a)š (cf. § 4.2.3), so that DUMU *a-ra-wa-áš* means ‘son of *arawa*’.

512 Cf. also (independently?) Goetze 1954a: 356 and Landsberger 1954: 123.

can interpret these personal names as follows: *arawa* /aráwa/ ‘free (one)’, *arawaḫšu* /arawahsu/ ‘free son, free-born’,⁵¹³ *arawan* /arawand-/ ‘the free one’.

5.3.8 *arḫan(a)-*

This element only occurs in the name *arḫanuman* (g.u.),⁵¹⁴ which is attested only once. I know of no good Hittite comparandum.

5.3.9 *arn(a)-*

Within the Kanišite corpus, this element only occurs in the name *arnuman* (m.),⁵¹⁵ but Zehnder (2010: 125) adduces also the woman’s name *ʿarnaniga* as attested in a text from Alalah.⁵¹⁶ Since *arn(a)-* is combined with the element *-uman*, which in origin is a suffix that makes derivations from geographical names, Goetze (1931: 260–1) compares it to the city name ^{URU}*arana*-,⁵¹⁷ whereas Zehnder (2010: 125)⁵¹⁸ assumes a connection with the city name ^{URU}*arinna*.⁵¹⁹ In both cases we would have to assume a syncope (* /aranomán/ > /arnomán/ or /arin:omán/ > /arn:omán/). This may have some merit, but can at this point only be judged as speculative. I know of no other possible Hittite comparandum, however.

5.3.10 *arpu(a)-*

This element only occurs in the name *arpuahšušar* (f.).⁵²⁰ As far as I am aware, no good comparandum in Hittite exists.

5.3.11 *arši(a)-*

This element only occurs in the name *aršiaḫšu* (g.u.),⁵²¹ which is attested only once. Formally, it may be compared to Hittite *aršīe/a-zi* ‘to flow’,⁵²² or to

513 Cf. Landsberger’s translation “freier Sohn” (1954: 123).

514 *ar-ḫa-nu-ma-an* (ICK 2, 43: 22). Note that in the hand copy of this tablet as given in ICK 2, the name seems to be badly damaged: . However, in the hand copy as provided by Donbaz & Joannès (1982: 41), the name is given as: . Note, however, that Donbaz & Joannès (*ibid.*: 33) transliterate the name as “[Ar-]ha-nu-ma-an”, as if the sign AR cannot be read. In their hand copy it is clearly there, however.

515 *ar-nu-ma-an* (AKT 3, 41: 19; AKT 10, 22b: 6 (-[an])); BIN 4, 93: 11; CCT 1, 33b: 18).

516 *ʿar-na-ni-ga* (AT 298 iv 16).

517 Del Monte & Tischler 1978: 29.

518 Zehnder refers to Laroche (1961: 58) for a connection between Kanišite *arn(a)-* and the city name ^{URU}*arinna*, but Laroche does not mention the Kanišite names at all.

519 Del Monte & Tischler 1978: 32–6.

520 *ar-pu-a-ah-šu-šar* (AKT 10, 61b: 7, 10), *ar-pu-wa-ah-šu-šar* (AKT 10, 61a: 3).

521 *ar-ši-aḫ-šu* (AKT 8, 253: 1).

522 Note however that in Ḫattuša Hittite, the *-īe/a-*inflected stem *aršīe/a-zi* represents a younger remodelling of the original root verb *ārš-zi* / *arš-*, which makes a formal comparison to the Kanišite element *arši(a)-* difficult.

arši- (c.) ‘planting, plantation, cultivation’, but neither of these is semantically self-evident.

5.3.12 *aru(a)-*

This element may be present in the name *aruahšu* (g.u.), if it really exists.⁵²³ If so, it may be identical to the independent name *arua* (g.u.).⁵²⁴ Formally, one could connect this element to Hittite *aru-* /*aru-* ‘high(?)’. This would yield for *aruahšu* a meaning ‘high-born’, which may not be unattractive.

5.3.13 *arun(a)-*

This element is only found in the name *arunahšu* (g.u.), which is attested only once.⁵²⁵ Formally, it resembles the Hittite noun *aruna-* (c.) ‘sea’, which would mean that *arunahšu* may be interpreted as /*arunahsu*/ ‘(male) child of the sea / sea-born’. Semantically, this interpretation is not self-evident, but may not be impossible either.

See the following lemma for a possible connection with the element *aruan(a)-*.

5.3.14 *aruan(a)-*

This element only occurs in the name *aruanaḫšu* (m.), which is attested twice.⁵²⁶ Formally, we may think of a connection with the toponym ^{URU}*aruāna*,⁵²⁷ but since this town seems to have been situated in the land of Mirā, on the west coast of Anatolia, and thus far away from Kaniš, this may not be very attractive. Another possibility is to assume that *aruanaḫšu* stands for /*arwnahsu*/, and is in fact identical to the name *arunahšu*, which was treated in the preceding lemma. See there for a possible interpretation.

5.3.15 *arzan(a)-* / *arzin(a)-*

This element only occurs in the name *arzanaḫšu* / *arzinahšu* (m.), which is well attested.⁵²⁸ Because of the spelling alternation *arzan(a)-* / *arzin(a)-* we

523 Dercksen (in his unpublished collection) cites for the unpublished text C 35: 9 a name *a-ru-wa-aḫ-šu*. However, Bilgiç (1945–1951: 3⁸) cites for this same text (“Unv. C 35”: 9) the name “*Araḫahšu*”. We therefore cannot at this moment be certain which of the two readings is the correct one.

524 Cited as “Aruwa” by OAPD for the unpublished text kt k/k 89.

525 *a-ru-na-aḫ-šu* (AKT 8, 256: 2).

526 *ar-wa-na-aḫ-šu* (AKT 3, 34: 23; kt 87/k 285: 2).

527 Del Monte & Tischler 1978: 42.

528 *ar-za-na-aḫ-šu* (C7 Landsberger: 12; ICK 1, 129: 5, 7; KTK 86: 12; KTS 51b: 11; LB 1228: 9; RA 59, p. 40 nr. 16: 26; TC 1, 87: 57; TC 2, 53: rev. 20 ([*a*]r-); kt m/k 102: 1; kt s/t 92 [1b]: obv. 6 ([*a*]r-za-...; Donbaz 1993: 132⁹ rather reads “... [š]a Za-na-aḫ-šu”, however)), *ar-zi-na-aḫ-š[u]* (kt g/t 42 + z/t 11 [1b]: 24).

may assume that the underlying form was /artsn(a)-/ (cf. § 3.2.3). Laroche (1966: 298) connected it with the Hittite stem *arzana-* ‘inn’, which is attested in e.g. *arzanaš per* ‘inn, hostel, brothel’, *arzanae-zi* ‘to billet, to quarter’, ^{LÚ}*arzanāla-* ‘inn-keeper’.⁵²⁹ If correct, we may interpret *arzanahšu* / *arzinahšu* as /artsnāhsu/ ‘inn-born’.⁵³⁰

5.3.16 *aš-*

This element only occurs in the women’s name *ašalka* / *ašilka*.⁵³¹ Zehnder (2010: 128), who was not aware of the spelling *ašalka*, analyses the name *asilka* as consisting of *aši-* + *-lka*, and calls *aši-* a “schwer zu deutende[s] Erstglied”.⁵³² However, if the analysis of the alternation between *a* and *i* as pointing to an original consonant cluster [-slk-] is right (cf. § 3.2.3), we are in fact dealing with an initial element *aš-*.

In Hittite, we find several possible comparanda to *aš-*, namely the verbal stems *aš-* ‘to be’, *aš-* ‘to sit’, *āšš-* ‘to remain, to stay’, and *āšš-* ‘to be loved’. Semantically, the latter option seems the most attractive one. Since in Hittite the stem *āšš-* ‘beloved’ (also in the adjective *āššu-*, cf. § 5.2.4) is phonologically to be interpreted as /ʔas:-/ (cf. Kloekhorst 2014: 648), we may hesitatingly analyse *ašalka* / *ašilka* as /ʔas:lk:á/ ‘beloved-bright one’.

5.3.17 *aš'a-(?)*

The woman’s name spelled *a-áš-a-al-kà* (kt 92/k 1033: 5, 13, cf. Yilmaz 1997: 106) is not easy to interpret, because of the broken spelling *-áš-a-*.⁵³³ According to Old Assyrian orthography, such a broken spelling can indicate the presence

529 Cf. Puhvel HED A: 185–6.

530 Cf. Puhvel HED H: 245, who translates “Brothel-born”. Inns were clearly a common feature of the commercial infrastructure, and more than three dozen places with inns are known during the *kārum* period; for a complete list of locations and prices, cf. Barjamovic 2011: 36–37.

531 *a-ša-al-kà* (AKT 10, 35a: 6), *a-ši-il₅-kà* (AKT 10, 21a: 7; AKT 10, 21b: 7, 13 ([*a-šl*]-); AKT 10, 35b: 7, 15; VAT 4536 [1b]: 6, 13).

532 Zehnder refers to Laroche (1966: 327), who recognizes an element *asi* in several Luwian names, but this element does not in fact exist: the names that Laroche refers to are all written in hieroglyphs and are nowadays interpreted differently; e.g. Laroche’s “**Masanasi*”, based on a spelling “^mDIEU-na-á+s-ī-mi-š” (1966: 115), is nowadays read ¹DEUS-na-(OCULUS)á-za-mi-sá (KARATEPE 4 § 2); Laroche’s “*Asitawada*” (1966: 44), based on a spelling “^mÁ+s-ī-ti-(a)-wa-tà” is nowadays read ¹(LITUUS)á-za-ti(-i)-wa/i-tà- (KARATEPE 1, *passim*); etc. Zehnder’s own reference to an element *aši-* in the Kanišite name *ašiaši*, which, as he points out himself, may be Hattic because of the full reduplication (cf. sections 4.6 and 4.7), does not have much merit.

533 Zehnder (2010: 127) proposes to read the form as *a-šu¹-a-al-kà* (reading the sign ÁŠ as ŠU), and interpret it as a name starting in *ašūwa-*. However, the hand copy of the tablet (Yilmaz 1997: 109) clearly shows the sign ÁŠ in both attestations of this name (𐎶 in line 5,

of a weak consonant (*ʔ*, *y* or *w*), so we may read *ašʔalka*, *ašyalka* (= *ašialka*) or *ašwalka* (= *ašualka*). At first sight, a reading *ašualka* may look attractive since there are other Hittitoid names starting in *ašua-* (e.g. *ašuahšu*, *ašuan*). However, these names contain a linking *-a-* (*ašua-a-ḥšu*), or the *a* is part of the second element (*ašua-an*), as is clear from the existence of the name *ašula*, which must be analysed *ašu-la* (cf. the treatment of the element *ašu-*, below). Since the element *-lka* does not use the linking *-a-* very often (cf. *azu-lka*, *šupi-lka*, *tipu-lka*, but in *naki-a-lka* it does seem to occur), I would rather expect a form **ašu-lka*, and not **ašu-a-lka*. The other possible readings, *ašʔalka* and *ašialka*, leave the name without a connection to other Hittitoid names. This raises the question whether we are allowed to ignore the broken spelling, and assume that *a-áš-a-al-kà* is just a variant spelling of *a-ša-al-kà* = /aslk:á/ (cf. the previous paragraph)?

5.3.18 *aši(a)-*

This element is only found in the name *ašiuman* (g.u.),⁵³⁴ which occurs in one text only. Formally, one could think of a connection with the Hittite verb *āššiē/a-tta(ri)* ‘to be loved, to be good’ (also attested in the name *ašiet / ašiat*, cf. section 7.1), but semantically this is less attractive: names in *-uman* usually have a toponym as their first member.

5.3.19 ^(†)*ašimni-*

This element is only found in the name *ašimnilka* (f.), as attested in kt 94/k 518 (a debt-note), line 3 of which reads: *ù a-ši-im-ni-il₅-kà a-ši-ti-šu* ‘and of Ašimnilka, his wife’ (courtesy Barjamovic). Since an element *ašimn(i)-* is not found in any other name, whereas the element *šimn-* (with its variant *šamn-*) is well attested, also in the name *šimnilka* (f.), I am inclined to think that *a-ši-im-ni-il₅-kà* is a faulty spelling for *šimnilka*. Could it have been influenced by the word *a-ši-ti-šu* that followed it (note that the two forms share the initial signs *a-ši-*)?

𐎶 in line 13), in both cases clearly distinct from the signs ŠU as used on the same tablet (𐎶 in line 1, 𐎶 in line 12).

534 *a-ši-ú-ma-an* (AKT 6b, 459: 28).

5.3.20 *a/iškuna-*

This element occurs in the women's name *aškunanika* / *iškunanika*,⁵³⁵ but is also attested independently, as *iškuna* (g.u.).⁵³⁶ From Hittite texts we know the name ^m*iškunāššu*,⁵³⁷ which contains an initial element *iškuna-*, as well, combined with an element *-āššu* that clearly can be equated with Kanišite *-ašu* (cf. § 5.2.4). The alternation between *a* and *i* in the Kanišite names points to an underlying form starting in a cluster /sk-/.⁵³⁸ Zehnder (2010: 176) proposes to connect this element with Hittite *iškunant-* 'stained, dirty' and *iškunaḫḫ-* 'to stain, to disgrace', which according to Tischler (HEG I: 403–4) are derived from a stem **iškuna-* 'stain, spot, mark'. Zehnder (*ibid.*) remarks: "Auf diese Grundlage ein Namensmotiv für ^(f)*iškunanika* festzustellen, ist schwierig; man könnte allenfalls an ein auffälliges Muttermal denken". This would mean that *aškunanika* / *iškunanika* could stand for /skunanéka/ 'sister with a birthmark', or, perhaps more positively, 'freckled sister', and *iškuna* for /skuna/ 'birthmark' or 'freckle'.

5.3.21 *ašu-*

This element occurs in the Hittitoid names *ašuahšu* (g.u.),⁵³⁹ *ašuan* (m.),⁵⁴⁰ *ašuat* (m.),⁵⁴¹ *ašula* (g.u.).⁵⁴² and *ašu'uman* (m.).⁵⁴³ It was already Bilgiç (1945–1951: 6, 18), who compared it with Ḫattuša Hittite *āššu-* 'good, dear, beloved'. In this way, the name *ašuan*, which Bilgiç (*o.c.*: 4) interpreted as underlyingly

535 *áš-ku-na-ni-kà* (AKT 10, 30a: 7; AKT 10, 30b: 5, 11); *iš-ku-na-ni-kà* (AKT 10, 22a: 6; AKT 10, 22b: 6). Note that *aškunanika* is mentioned as the wife of a man called *šalimmuḫ*, whereas *iškunanika* is mentioned as the wife of a man called *šalmuḫ*. It is therefore likely that both names refer to a single individual (cf. also Zehner 2010: 176).

536 *iš-ku-na-a* (VS 26, 101: 12).

537 ^m*iš-ku-na-a-aš-šu* (StBoTB 4.30, 28).

538 Thus also Zehnder 2010: 176.

539 *a-šu-a-aḫ-šu* (AKT 3, 7: 18).

540 *a-šu-an* (kt 73/k 14 [1b]: 12; kt 77/k 136 [1b] (Günbattu 2014, nr. 11): 21; kt 89/k 383a [1b]: 1; kt 89/k 383b [1b] (Günbattu 2014, nr. 13): 29), *a-šu-a-an* (kt h/t 330 [1b]: 17; kt 87/k 285: 3), *a-šu-wa-an* (AKT 6a, 197: 1 (*a-šu-wa-an-zi*), 5, 12, 13, 24; KTK 86: 2; kt §/k 3 [1b] (Günbattu 2014, nr. 14): 10, 22 (*-an*)). Note that in AKT 6a, 197: 1 we find the spelling *a-šu-wa-an-zi*, whereas the remainder of this tablet writes *a-šu-wa-an*. This form in *-anzi* functions as the subject of the sentence it occurs in, and we may therefore assume that it represents a Hittitoid nom.sg. form in [-ants] = /-and-/ + /-s/ (cf. § 4.2.3). The vowel *-i* should then be regarded as a graphic vowel that is needed to write the word-final triconsonantal cluster [-nts].

541 *a-šu-at* (kt o/k 52: 8, 14, 15; kt v/k 52: 11), *a-šu-wa-at* (AKT 10, 34a: 22; AKT 10, 34b: 3).

542 *a-šu-la* (CCT 5, 49d: 12).

543 *a-šu-ú-ma-an* (kt 94/k 760: 4; kt 94/k 979: 2'; kt 94/k 1216: 16 (all three courtesy Larsen)).

ending in /-and/, can be equated with the Hittite adjective *āššuuant-* ‘good, favourable’, as is done by Laroche (1966: 314).⁵⁴⁴ This equation is supported by the presence of the name *ašuat* (which was not yet known to Bilgiç and Laroche), which together with *ašuan*, may be viewed as reflecting an underlying form in /-and/. Since the element /-and/ is found as the final part of other names as well, we may analyse *ašuan* / *ašuat* as reflecting /ʔas:u-and/.

It therefore seems attractive to assume the presence of the element /ʔas:u-/ ‘good, favourable’ in the other names as well: *ašuaḥšu* = /ʔas:u-a-hsu/ (with the linking -a-) ‘good-born’; *ašu’uman* = /ʔas:u-omán/, litt. ‘coming from good’.

To what extent the name *ašula* (g.u.) belongs here too, depends on one’s interpretation of the element *-la*, cf. § 5.2.9.

5.3.22 *ašue*-(?)

In his edition of the fragment kt n/k 42 [1b], Donbaz (2008b: 61) cites line 3 as “KIŠIB A-šu-we-[*il₅-ga* ...]”, which would translate as ‘seal of Ašuwelga’. It is unclear to me what the reading of this name is based on, however: as far as I am aware, no other attestation of it can be found. Moreover, since the sign PE/I can be read *we* as well as *wa*, *wi* and *wu*, a reading *a-šu-wa*[-*aḥ-šu*], *a-šu-wa*[-*an*] or *a-šu-wa*[-*at*] would be equally possible (all these names are attested as such). The only remark that Donbaz (2008b: 62) gives about this reading is that “Ašuwelga” is “probably wife of Šarabunuwa” (who may be present in line 2: “KIŠIB Ša-r[*a-bu-nu-wa* ...]”, thus Donbaz 2008b: 61). This seems to imply that Donbaz is aware of one or more other texts in which an “Ašuwelga” occurs that is mentioned as the wife of *šarapunua*.

If Donbaz’ reading of this name can be trusted,⁵⁴⁵ and this name really existed, we may give the following analysis. According to the transliteration system as set out in section 3.1, we should transliterate Donbaz’ “A-šu-we-[*il₅-ga*]” as *a-šu-wi*[-*il₅-kà*], i.e. with *i* and with *k*. Nevertheless, since in Old Assyrian orthography the vowel *i* can represent /e/ as well, a transliteration *a-šu-we*[-*el-kà*] is possible as well. With this latter reading, the initial element

544 Jankovska’s (1968: 180) and Nashef’s (1991: 21) connection between *ašuan* and the geographical name (KUR) ^{URU}*āššūya* is far less convincing, as Zehnder (2010: 127) rightly remarks.

545 But note that for the same text Donbaz (2008b: 61) cites a name “Ší-wa-š[u-šar]” (line 6), which, as far as I know, is not attested anywhere else either. Moreover, this reading is beset with problems. The sign combination *-šu-šar* is in all other Kanišite names always preceded by *-aḥ-*, so the only way to be able to interpret a name “Ší-wa-š[u-šar]” in a cogent way is by emending it to *ší-wa*<*aḥ*>-š[u-šar]. But even then, an analysis as *ší-wa-ḥšušar* is problematic since an element *ší-wa-* is not found in any other Kanišite name. A more convincing interpretation of this line is provided by Hecker (aATU), who reads “Ší-wa-á[š-me-i]”. This reading, too, fits the traces of the broken sign, and moreover provides a name that is indeed attested elsewhere as well.

of this name, *ašue-*, would be identical to the element *-ašue* that occurs as the final part of a few Hittitoid women's names (cf. above). This element will be treated in more detail in Chapter 8.

5.3.23 *at(a)-*

An element *at(a)-* is found in the names⁵⁴⁶ *ataḥšu* (m.),⁵⁴⁷ *atali* (m.),⁵⁴⁸ and *atuman* (m.),⁵⁴⁹ and may be attested as the independent name *ata* (m.).⁵⁵⁰ If we are allowed to equate the Kanišite men's name *atali* with the Ḫattuša Hittite men's name *ṁattalli*,⁵⁵¹ with geminate *-tt-*, it would mean that the Kanišite element *at(a)-* represents /at:(a)-/, with a long, voiceless /t:/. This would fit Landsberger's interpretation of *ataḥšu* (which he cites as *Atta-aḥšu*) as "Vaters Sohn" (1954: 123), since Ḫattuša Hittite *atta-* 'father' has a geminate *-tt-*, too.⁵⁵² We therefore can interpret these names as follows: *ata* /at:a/ 'father', *ataḥšu* /at:áhsu/ 'father-born'; *atali* /at:al(:)i/ 'the fatherly one?' and *atuman* /at:omán/ 'coming from father'.⁵⁵³

⁵⁴⁶ The name "Atalka" as cited by OAPD for kt 87/k 145 does not exist: it is in fact *iatalka*. Note that the name *adala* (m.) (cf. footnote 324 for attestations) cannot belong to this group since it is spelled with the sign DA, whereas the other names are in principle always spelled with the sign TA. Cf. § 3.2.10 for the difference between the signs TA and DA.

⁵⁴⁷ *a-ta-aḥ-šu* (AKT 8, 76: 41; AKT 8, 312: 5; AKT 8, 313: 7; AKT 8, 336: 16; AKT 10, 1a: 2; AKT 10, 1b: 7, 10; AKT 10, 4: 6; AKT 10, 6a: 19; AKT 10, 6b: 3; AKT 10, 40b: 7; AKT 10, 46a: 17; AKT 10, 46b: 5 ([*a-ta...*]; Kayseri 308: 4; KKS 31a: 10; KKS 31b: 15; TC 3, 238b: 4; kt c/k 857: 7; kt m/k 2: 16; kt v/k 176: 5, 17; kt 91/k 282; kt 91/k 403), *a-ta-aḥ-šu-ú* (AKT 8, 313: 10 ([*a-t*]a-...)), *a-da-aḥ-šu* (AKT 10, 3: 3; kt 91/k 181: 7).

⁵⁴⁸ *a-ta-li* (AKT 10, 12a: 18; AKT 10, 12b: 1 (*-[l]*); AKT 10, 31a: 15; AKT 10, 31b: 1 ([*...-l*]i); AKT 10, 35a: 23; AKT 10, 35b: 5; AKT 10, 57a: 15; AKT 10, 57b: 3).

⁵⁴⁹ *a-tù-ma-an* (AKT 4, 13: 11; AKT 4, 14: 16; AKT 4, 54: 1; AKT 4, 61: 1, 4; AKT 4, 63: 1 (<*-an*>); AKT 4, 64: 2; AKT 4, 68: 1 (*an-tù-ma-an*); AKT 10, 10a: 3; AKT 10, 10b: 4 (*a-tù-...*), 7; AKT 10, 28a: 18; AKT 10, 28b: 3; AKT 10, 52: 15; ICK 1, 119: 10; kt e/k 162b: rev. 2 ([*-an*]); kt r/k 15 [1b]: 1, 16; kt 73/k 14 [1b]: 23; kt 87/k 99: obv. 4). Another attestation of "Aduman" is cited by OAPD for the unpublished text kt 86/k 100. The unique spelling *an-tù-ma-an* (AKT 4, 68: 1), with initial *an-* instead of the usual *a-*, may indicate that the element in *atuman* in fact contained a nasal. Since dental stops following nasals often were voiced (cf. § 5.3.45), we may then have to assume that this name contained an element /and(a)-/ (note that the sign *tù* can spell [du] as well). If so, we should separate it from the other names starting in *at(a)-*, which are spelled with TA, and therefore certainly must have contained a voiceless dental stop.

⁵⁵⁰ *a-ta* (AKT 10, 20a: 14; AKT 10, 35a: 22; AKT 10, 35b: 4; AKT 10, 64a: 3; AKT 10, 64b: 7; BIN 4, 146: 24; ICK 1, 9: 2; ICK 2, 84: 9 (*-t[a]*); RHA 18 (66–67), 37: 7; VS 26, 125: 5; kt c/k 1340: 17, 19; kt v/k 147: 12; kt v/k 147e: 2).

⁵⁵¹ Cf. footnote 356.

⁵⁵² Also Zehnder 2010: 95 connects *at(a)-* with Hittite *atta-* 'father'.

⁵⁵³ But cf. footnote 549 for the uncertainty regarding *atuman*.

5.3.24 *azu-*

This element occurs in the Hittitoid names *azulka* (f.)⁵⁵⁴ and *azumei* (g.u.).⁵⁵⁵ It also occurs independently as a man's name, *azu*, which is attested often. In quite a few cases, this latter name has a clear Assyrian background. For instance, we find an *azu* who is the son of Ili-nada, and brother of Enna-Suen and Num-Šamaš;⁵⁵⁶ an *azu* who is the son of Puzur-Aššur;⁵⁵⁷ an *azu* who is the father of Aššur-nišu;⁵⁵⁸ etc. According to Zehnder (2010: 137), this name may therefore be equated with the Akkadian words *asum* 'bear' or *asûm* 'physician'. However, there are also a few cases where the name *azu* seems to have an Anatolian background: there is an *azu* who is the son of *šamnuman*;⁵⁵⁹ there is an *azu* who is the father of *pirua*;⁵⁶⁰ and an *azu* who is the brother of *tikšar* son of [...-]*kadaḥšu*.⁵⁶¹ It is likely that in these cases the name *azu* is Kanišite and can be equated with the element *azu-* as found as the first member of *azulka* and *azumei*.

Moreover, besides the men's name *azu* we also find the women's name *azue* (f.),⁵⁶² which show the exact same relationship as between the element *-ašu* (m.) and its feminine counterpart *-ašue* (f.) (note that *azue-* also occurs as the initial element of a compound name, see below). This clearly points to a Hittitoid background of all these names.

Unfortunately, no clear connection between *azu(-)* and a Hittite lexeme can be made,⁵⁶³ so we cannot say anything about a possible meaning of this element.

5.3.25 *azue-*

This element occurs only in the women's name *azuelka* (f.),⁵⁶⁴ which because of the presence of the element *-lka* must be viewed as Hittitoid. The element

554 *a-zu-ul-kà* (AKT 4, 49: 2 (-*kà*!); AKT 4, 64: 1; kt o/k 64: 3 (-*kà*!) (Albayrak 1998: 8 reads -*ša*, but cf. Dercksen 2014: 199 for the reading -*kà*!); kt 94/k 154: 7 (courtesy Michel); kt 94/k 156: 3 (courtesy Michel)).

555 *a-zu-me-i* (AKT 10, 1b: 6).

556 *a-zu* (kt n/k 1830: 4, 7).

557 *a-zu* (VS 26, 125: 5, 7, 18), *a-zu-ú* (CTMMA 1, 84a: 105; CTMMA 1, 84b: 1).

558 *a-zu* (OIP 27, 56: 57).

559 *a-zu* (kt c/k 1635: 1).

560 *a-zu* (AKT 10, 40b: 3).

561 *a-zu* (AKT 10, 11a: 14; AKT 10, 11b: 2).

562 Cf. footnote 565 for attestations.

563 Cf. also Zehnder (2010: 137): "Ein weitergehender Anschluss [von *azu-*] an das hethitische Lexikon bzw. die Theo- oder Toponymie scheint nicht zu bestehen".

564 *a-zu-e-el-kà* (KTH 5: 1, 25; TTC 26: 1, 3), *a-zu-wi-il₅-kà* = *a-zu-we-el-kà* (TC 3, 254: 5).

azue- also occurs as an independent women's name, *azue* (f.).⁵⁶⁵ The relationship between the women's name *azue* and the men's name *azu* (cf. its treatment in the preceding paragraph) is reminiscent of the relationship between the element *-ašu*, which forms men's names, and the element *-ašue*, which forms women's names (cf. § 5.2.5). As was argued above, the element *-e* apparently functions as a feminizing suffix (cf. Chapter 8 for a treatment of its prehistory), and we may therefore analyse the name *azue* as *azu-e*, in which the element *-e* is used to derive a women's name from the men's name *azu*.

This analysis of *azue* also enlightens the relationship between the names *azuelka* and *azulka* (cf. § 5.2.24). At first sight, the two names may seem to be allophones of each other, and one may therefore be inclined to assume that the underlying form was something like /atswlka/, in which the large consonant cluster could be broken up by an epenthetic vowel, yielding [atsw_elka]. However, as was explained in § 3.2.6, the colour of the epenthetic vowel is determined by its environment, and adjacent to a labial consonant we would expect it to be *u*, like in the name *arawarḫina* / *arawurḫina*, which represents an underlying /arawrhina/ that could be pronounced [araw_urhina].

I therefore want to propose the following analysis. Originally, there was only the compound name *azulka*, which forms a combination of the independent men's name *azu* and the element *-lka*, which builds women's names (cf. § 5.2.10). However, since besides the men's name *azu* also a feminine counterpart, *azu-e*, existed, this latter form was at a certain point taken over into the women's name *azu-lka*, yielding *azu-e-lka*.

As was explained in the section dealing with the element *azu-* (§ 5.3.24), no clear connection with a Hittite word lexeme can be made, so that the possible meaning of *azue* and *azuelka* remains elusive.

5.3.26 *elani-*

This element occurs in the name *elaniuman* (g.u.),⁵⁶⁶ but is also attested by itself, as *elani* (m.).⁵⁶⁷ Because the element *-uman* is clearly Hittitoid, we may

565 *a-zu-e* (ICK 1, 16a: 4, 7; ICK 1, 16b: 3; kt k/k 53: 3 (courtesy Kryszat)). On AKT 10, 6a: 18 and AKT 10, 6b: 3 we come across a person called *a-zu-WA/E/I/U*, whose gender is unclear. If this person is a woman, we may have to read this name as *a-zu-we*. Cf. already Goetze 1954a: 353 for the connection between *azuelka* and *azue*.

566 *e-lá-ni-ú-ma-an* (AKT 8, 252: 22).

567 *e-lá-ni* (AKT 10, 46a: 4; TC 3, 214b [1b]: 2; TPAK 1, 160: 4; kt §/k 3 [1b] (Günbattı 2014, nr. 14): 4). Note that it is not easy to discern this name from the well attested Assyrian name *elāli*: since the sign NI can be read not only *ní*, but *lí* as well, any attestation of the shape *e-la/lá-NI* may in principle be read *e-la/lá-ni* or *e-la/lá-lí*, and this latter spelling is often used to spell Assyrian *elāli* (which also occurs as *e-la/lá-LI*, in which the reading with *-lí* is ascertained). As Gojko Barjamovic informs me (p.c.), there is, in addition, an Assyrian

assume that *elani*(-) is Hittitoid, too. Formally, the element *elani*- resembles the initial part of the Hittite verb *elanieške/a^{zi}*, which is attested in a single passage only (KUB 7.53 ii 8–17), however, and the meaning of which is unclear.⁵⁶⁸

5.3.27 *eli(a)*-

This element only occurs in the name *eliaḫšušar* (g.u.),⁵⁶⁹ which contains the clear Hittitoid element *-ḫšušar*. Since this element occurs with the linking *-a-*, the first element can be either *eli-* or *elia-*. Both are attested as independent names as well, *eli* (g.u.)⁵⁷⁰ and *elia* (g.u.),⁵⁷¹ and one of these may therefore be equated with the element *eli(a)*-. I know of no good Hittite comparandum for them, however.

5.3.28 *eni-*

This element only occurs in the name *enilka* (g.u.).⁵⁷² Since *-lka* is a clear Hittitoid element, we may assume that *eni-* is Hittitoid, too. No clear Hittite comparandum can be found, however.⁵⁷³

5.3.29 *ewa-*

This element only occurs in the name *ewanika* (g.u.).⁵⁷⁴ Since the element *-nika* is clearly Hittitoid, we may assume that *ewa-* is Hittitoid, too. As Zehnder

man's name *elanum*, which in the genitive could be identical to *elani* (cf. e.g. Sadberk ARK 169: 2'–3': *ša a-lá-hu-um DUMU e-lá-ni*). In the preceding overview of attestations of Kanišite *elani* I have therefore only included the names that can be assumed to be non-Assyrian on the basis of context: in AKT 10, 46, *e-lá-NI* is the father of *ḫapuašu*; in TC 3, 214 [1b] and kt š/k 3 [1b], *e-lá-NI* is the bearer of the Anatolian title GAL *na-gi-ri* 'chief of the heralds'; and in TPAK 1, 160, *e-lá-NI* is the son of *pirua*.

568 Puhvel's proposal (HED 1: 268–9) that *elanieške/a-* derives from an *elanije/a-* that reflects earlier **elatin-ya-* cannot be correct, since **tn-* should have yielded geminate *-nn-*. On the basis of the existence of the form *e-le/i-ni-eš-ker* (KUB 39.65, 3, which is a duplicate to KUB 7.53), which points to a byform *elenieške/a-*, it may be better to assume that the underlying verb was *elanije/a-* / *elenije/a-*, which is a derivative in **-ie/o-* of an *n*-stem noun **elan-* / **elen-*, which showed ablaut in its suffix (cf. *išḫiman-* / *išḫimen-* 'string, line'). This implies, however, that **elan-* / **elen-* contains an archaic formation, which may stretch the evidence too far. Moreover, it does not help in finding a possible translation for this verb.

569 *e-li-a-ah-šu-šar* (kt 91/k 284: 10).

570 *e-li* (Anatolica 12, 138f.: 13 (*e²-*), 18; ICK 4, I 489: 4; VS 26, 121: rev. 7).

571 *e-li-a* (RA 59, p. 47 nr. 22: 21).

572 *e-ni-il₅-kà* (JCS 14, 3: 23).

573 Thus also Zehnder 2010: 176, who rightly remarks that "[d]as Demonstrativ-pronomen heth. *eni-* 'jener, der erwähnte' kommt ja wohl nicht in Betracht".

574 *e-wa-ni-kà* (KTS 2, 55: 1 (broken), 8, 18).

(2010: 177) remarks, “[a]us dem hethitischen Lexikon bietet sich formal heth. *ewa-* (*euwan-*) n. eine Feldfrucht (‘Gerste’?, < idg. **ǵeuo-*) an; ein guter Gesamtsinn des Kompositums ergibt sich daraus allerdings nicht”.

5.3.30 *gimarn(a)- / kimarn(a)- / kimirn(a)-*

This element is found in the name *gimarnala / kimarnala / kimirnala* (g.u.),⁵⁷⁵ which because of its final part *-ala* may be Hittitoid. Another name with a similar initial part is *kimarniman* (m.),⁵⁷⁶ which is attested only once. This name's latter part, *-iman*, is further unknown, however, and at first sight therefore does not belong to the group of Hittitoid elements. However, since the sign NI (𐎠) is rather reminiscent of the sign NU (𐎠), I wonder to what extent the name that is in its editions read *ki-ma-ar-ni-ma-an*, could instead be read *ki-ma-ar-nu-ma-an*.⁵⁷⁷ If this is correct, we would be dealing with a clear Hittitoid name consisting of the elements *kimarn(a)-* and *-uman*, which would imply a Hittitoid status for *gimarnala / kimarnala / kimirnala* as well.

Since we once find a spelling *gi-mar-n°*, with the sign *gi-*, this element may start with a voiced stop /g-/. The alteration between *g/kimarn(a)-* and *kimirn(a)-* cannot be a matter of an epenthetic vowel: besides *m* we would expect an *u* (cf. § 3.2.6). If we read *ki-mi-ir-n°* as *ki-me-er-n°*, we may assume a morphological alteration, namely between /gimrn(a)-/ and /gimern(a)-/. This is formally reminiscent of the Proto-Indo-European stem for ‘winter’, **ǵ^h(e)im-(e)r-*, as attested in e.g. Gr. χεῖμαρος ‘wintery’ < **ǵ^heim-er-iHo-*, Lat. *hibernus* ‘winterly’ < **ǵ^heim-r-ino-* and Arm. *jmeṛn* ‘winter’ < **ǵ^him-er-on-*. In Hittite, the word form ‘winter’ contains a different formation based on the stem **ǵ^hei-m-* (Hitt. *giemi* ‘in winter’ < **ǵ^hi-ém-i*; *gimmant-* ‘winter’ < **ǵ^hi-m-n-ent-*), but the *r*-stem formation **ǵ^him-(e)r-* may be attested in *gimra-* ‘field’.⁵⁷⁸ All in all, a connection between Kanišite /gimrn(a)-/, /gimern(a)-/ and the Indo-European word for ‘winter’ must remain speculative.

575 *gi-mar-na-lá* (kt 73/k 14 [1b]: 13), *ki-ma-ar-na-lá* (AKT 10, 64a: 5; AKT 10, 64b: 4, 9; kt 73/k 14 [1b]: 13; C 10 Landsberger: 5), *ki-mi-ir-na-lá* (DTCFD 31, 190: 5).

576 *ki-ma-ar-ni-ma-an* (TPAK 1: 161b: 1).

577 Unfortunately, in none of the three places where the envelope on which this name occurs is published (Bayram & Çeçen 1995: 4–5; Michel & Garelli 1996: 296–7; Michel & Garelli 1997 (= TPAK 1): 221–2), a hand copy or photograph of the text is provided for.

578 Cf. Kloekhorst 2008: 475–7 for details.

5.3.31 *ḫalki(a)-*

This element occurs in the clear Hittitoid names *ḫalkiašu* (m.)⁵⁷⁹ and *ḫalkiahšu* (g.u.)⁵⁸⁰ It is spelled *ḫa-al-ki-* as well as *ḫal-gi-*. This latter spelling is significant, since the sign GI points to the presence of a voiced stop [g].⁵⁸¹

It was already Hrozný (1932: 116) who equated *ḫalki(a)-* with Hittite *ḫalki-* ‘grain’, and more specifically its deified version, ^d*ḫalki-* ‘grain god’.⁵⁸² In this way, *ḫalki-ašu* = /halgi-ásu/ would denote ‘beloved by the grain god’,⁵⁸³ and *ḫalki-a-ḫšu* = /halgiáhsu/ ‘grain(-god)-born’.

5.3.32 *ḫamana-*

This element only occurs in the name *ḫamananika* (f.),⁵⁸⁴ which contains the clear Hittitoid final element *-nika*. I know of no good Hittite comparandum for *ḫamana-*, however.⁵⁸⁵

5.3.33 *ḫapi(a)-*

This element is attested in the names *ḫapiaḫšu* (m.),⁵⁸⁶ *ḫapiaḫšušar* (f.),⁵⁸⁷ and *ḫapiašu* (m.).⁵⁸⁸ It moreover occurs on its own as the men’s name *ḫapia*

579 *ḫa-al-ki-a-šu* (AKT 1, 48t: rev. 8; AKT 1, 48e: obv. 5; AKT 1, 79: obv. 4; AKT 3, 42: rev. 8; AKT 6a, 202: 13; AKT 10, 14: 2; AKT 10, 28b: 2; AKT 10, 56a: 12; AKT 10, 56b: 2; ATHE 2a: rev. 8; ATHE 2b: obv. 3 (*ḫa-al*[-...])); ICK 1, 129: 4; KKS 11a: obv. 4; KKS 11b: obv. 2, 3; KTH 28a: obv. 3; RA 59, p. 40 nr. 16: 10; RA 59, p. 47 nr. 22: 8; TC 3, 252: 1; TPAK 1, 113: obv. 3; VAT 4537 [1b]: 15 (-[*k*]i-); kt b/k 134e: obv. 1; kt b/k 134t: obv. 16; kt c/k 7: 4 (-[*k*]i-); kt c/k 183: 16; kt c/k 857: 13; kt c/k 1639b: 24; kt g/t 36 [1b]: 6; kt g/t 42 + z/t 11 [1b]: 35; kt o/k 52: 4; kt y/t 4: 4; kt 88/k 713 [1b]: obv. 6, 11, *ḫal-gi-a-šu* (KTP 43 [1b]: 21 (*ḫal*-); TC 1, 122 [1b]: rev. 9; kt k/k 14b [1b]: 15; kt n/k 31 [1b]: 25 ([*-šu*]); kt r/k 15 [1b]: 29; kt 77/k 136 [1b] (Günbatti 2014, nr. 11): 19; kt 89/k 383a [1b]: 36; kt 89/k 383b [1b] (Günbatti 2014, nr. 13): 32; kt 99/k 138a [1b]: rev. 16; kt 99/k 138b [1b]: rev. 5; kt o1/k 319a [1b] (Günbatti 2014, nr. 9): 34; kt o1/k 319b [1b] (Günbatti 2014, nr. 10): 27 (*ḫal*-)).

580 Cited as “Halkiahšu” by OAPD for the unpublished texts kt 94/k 754 and kt 94/k 1369.

581 Cf. § 3.1.1.

582 Thus also Bilgiç 1945–1951: 3, 18; Bossert 1946: 157–8; Goetze 1954a: 357; Laroche 1951: 107; Laroche 1966: 320; etc.

583 Thus Zehnder 2010: 81¹¹⁰, “dem (Gott) Ḫalki lieb”.

584 *ḫa-ma-na-ni-kà* (TPAK 1, 161a: 2; TPAK 1, 161b: 5). Zehnder (2010: 140) suggests that perhaps the women’s names *ḫa-ma-na-ni* (f.) (ICK 4, 1 557: 8) and *ḫa-ma-na²-ni* (AAA 1, 8: 15) may be regarded as misspellings for *ḫa-ma-na-ni<-kà>*. However, with the presence of another woman called *ḫa-ma-na-ni* (kt c/k 775: 2), this suggestion becomes difficult to believe. The name *ḫamanani* (g.u.) rather belongs to the group of names ending in *-nani* (cf. section 4.7).

585 Thus also Zehnder 2010: 140.

586 *ḫa-pi-aḫ-šu* (AKT 6a, 23: 5 (-*ṣu*); AKT 6b, 309: 12 (*ḫa*-); AKT 6b, 367: 12; kt g/k 118: rev. 9), *ḫa-pi-a-ḫ-šu* (kt a/k 906: 15), *ḫa-pi-aḫ-šu* (AKT 10, 22b: 4), *ḫa-pi-a-ḫ-šu* (CTMMA 1, 90a: 7; CTMMA 1, 90b: 9). The name *ḫa-pi-šu* (AKT 10, 25b: 2) may have to be read *ḫa-pi<-aḫ>-šu*.

587 Cited as “Hapiaḫšušar” by OAPD for the unpublished text kt 94/k 308.

588 *ḫa-pi-a-šu* (TC 3, 191: 5). Or should we view this form as a mistake for *ḫa-pi-a<-aḫ>-šu*? Goetze 1954a: 357 points to the presence of the names *ḫa-pi-a-šu* and *ḫa-pi-ia-šu* in texts

(m.).⁵⁸⁹ Zehnder (2010: 143) remarks that *ḥapi(a)-* forms an “Anklang” with the Hittite word ^{LÚ}*ḥapija-*, a cultic functionary (likewise Laroche 1951: 116), but such a comparison is not very strong semantically. We may rather compare the Hittite root *ḥāpp-*, from which words like *ḥāppar-* ‘trade’ and *ḥāppiriya-* ‘town’ are derived, but which also forms the basis of *ḥappina-* ‘wealthy, rich’. Such semantics would fit onomastic material much better. However, in absence of a Hittite formation **ḥappiya-* denoting ‘rich, wealthy’, this idea must remain speculative.

5.3.34 *ḥapu(a)-*

This element occurs in the names *ḥapuahšušar* (f.),⁵⁹⁰ *ḥapuala* (m.),⁵⁹¹ *ḥapuanika* (f.),⁵⁹² and *ḥapuašu* (m.).⁵⁹³ The latter of these names also occurs in Hittite texts, where it is spelled ^m*ḥappuuaššu*,⁵⁹⁴ with geminate *-pp-*. We may therefore assume the presence of a long /p:/ in the Kanišite element *ḥapu(a)-* as well: /hap:u(a)-/.

According to Goetze (1954a: 356) and Laroche (1966: 298, 339), the Kanišite element *ḥapu(a)-* may be equated with the Hittite noun *ḥappu-*, which Goetze translates as ‘shelter’, but which HW² Ḫ: 255 translates as “Gatter(?)”, i.e. ‘fence, railings (?)’. Although at first sight this may not seem very attractive

from Nuzi (referring to Gelb, Purves & McRae 1943: 55), which would support the reading *ḥapiašu* of the Kanišite name.

- 589 *ḥa-pi-a* (AKT 10, 21b: 1), *ḥa-pi-a* (AKT 10, 15a: 14; AKT 10, 15b: 3 (*ḥa-p[i-...]*); AKT 10, 21a: 16; AKT 10, 46a: 5; AKT 10, 46b: 2; AKT 10, 52: 16; AKT 10, 55a: 14; AKT 10, 55b: 5; TC 3, 252: 5, 16; VAT 4537 [1b]: 16; kt m/k 102: 5; kt n/k 75: 3, 10; kt 87/k 285: 1, 5), *ḥa-a-pi-a* (AKT 10, 19b: 4).
- 590 *ḥa-pu-aḥ-šu-šar* (kt m/k 69: 28; kt m/k 102: 7, 14), *ḥa-pu-wa-aḥ-šu-šar* (CCT 5, 49d: 4; TC 3, 218a: 4; TC 3, 218b: 4, 7). Another attestation of “Hapuahšušar” is cited by OAPD for the unpublished text kt 87/k 259.
- 591 *ḥa-pu-a-lá* (AKT 5, 37: 3, 5; AKT 10, 8a: 4; AKT 10, 8b: 4, 9; AKT 10, 17b: 9; ATHE 75: 3, 16; ICK 1, 19a: 6; KKS 21a: 7, 22; KKS 21b: 8 ([*ḥ*]a-), 14; TC 1, 62 [1b]: 23 (*ḥa-pu-[a-]lá*); kt f/k 61 [1b]: 1; kt n/k 32 [1b]: 1, 33; kt n/k 75: 7; kt o/k 44: 1; kt t/k 32: 2; kt 73/k 14 [1b]: 14; kt o1/k 319a [1b] (Günbatti 2014, nr. 9): 1; kt o1/k 319b [1b] (Günbatti 2014, nr. 10): 24), *ḥa-pu-a-la* (ACK 6b, 470: 4; ICK 1, 19a: 9; ICK 1, 19b: 4). Perhaps the name *ḥa-pu-lá* (AKT 1, 67: 3) may be read *ḥa-pu-<a>-lá*.
- 592 *ḥa-pu-a-ni-kà* (AKT 10, 14: 3; AKT 10, 36a: 2; AKT 10, 36b: 3; kt f/k 62: 6), *ḥa-<pu->-wa-ni-kà* (AKT 10, 36b: 5).
- 593 *ḥa-pu-a-šu* (AKT 6a, 129: 44; AKT 6c, 700: 16; AKT 8, 186: 32; AKT 8, 312: 5; AKT 10, 1b: 1; AKT 10, 5a: 5; AKT 10, 5b: 5, 10; AKT 10, 7a: 6, 15; AKT 10, 7b: 1, 10; AKT 10, 38a: 16; AKT 10, 38b: 2; AKT 10, 46a: 4; AKT 10, 46b: 3; AKT 10, 58a: 15; AKT 10, 58b: 3; AuOr 8, 197–205: 4; ICK 1, 19a: 3; ICK 1, 19b: 25; ICK 4, 1 837: 4; kt f/k 59b [1b]: 23; kt g/t 36 [1b]: 14; kt h/t 330 [1b]: 12; kt o/k 40: 1; kt 88/k 1082: 6, 13; kt 89/k 369 [1b]: 3; kt o1/k 319a [1b] (Günbatti 2014, nr. 9): 3), *ḥa-pu-wa-šu* (kt g/t 36 [1b]: 4; kt g/t 42 + z/t 11 [1b]: 3), *ḥa-áp-wa-šu* (AKT 9a, 85: 3).
- 594 Cf. the attestations gathered in footnote 27.

semantically, according to Zehnder (2010: 144) we may compare the usage of Akk. *dūrum* ‘wall’ in personal names like ^(f)*abīdūrī* ‘my father is my wall’.⁵⁹⁵

5.3.35 *ḥaršumn(a)-*

This element occurs in the names *ḥaršumnaḥšu* (m.),⁵⁹⁶ *ḥaršum(n)a/ilka* (f.),⁵⁹⁷ and *ḥaršu(m)numan* (m.).⁵⁹⁸ The fact that in the cluster *-mn-* sometimes the *-n-* is missing (*ḥaršumalka* and *ḥaršumilka* vs. *ḥaršumnalka*) and sometimes the *-m-* is missing (*ḥaršunuman* vs. *ḥaršumnuman*) is probably not due to scribal errors, but reflects a real phonetic development, namely assimilation of the cluster *-mn-* to either *-m-* or, when an *-m-* is present in the word already, to *-n-* (which in both cases probably were geminate sounds, /-m:-/ and /-n:-/, respectively).

On the basis of the name *ḥaršumnuman*, which contains the second element *-uman* that is equated with the Hittite ethnicon suffix *-umen-* / *-umn-* ‘coming from’ (cf. § 4.3.2 and 5.2.13), already Goetze (1931: 260–1) connected the element *ḥaršumna-* to the city name ^{URU}*ḥaršumna*.⁵⁹⁹ According to Tischler (HEG 1: 188), this toponym is based on the Hittite word *ḥaršumn(a)-* ‘waterway’ (which itself may be a derivative in *-umen-* / *-umn-* from a stem *ḥarš-*). We may therefore assume that *ḥaršu(m)numan* /harsomnomán/ or /harson:omán/ originally meant ‘coming from Ḥaršumna (‘Waterway’), and that *ḥaršumnaḥšu* /harsomnáhsu/ and *ḥaršum(n)a/ilka* /harsomnlk:á/ or /harsom:lk:á/ are later formations.

595 Zehnder’s alternative connection (2010: 144), namely with the Ḫattuša Hittite verb *ḥapuyai-* ‘?’ is formally unlikely, since this verb contains a single *-p-*, which contrasts with the long /p:/ of *ḥapu(a)-* /hap:u(a)-/.

596 *ḥa-ar-šu-um-na-aḥ-šu* (AKT 10 38a: 3; AKT 10, 38b: 4, 7;).

597 *ḥa-ar-šu-um-na-al-kà* (kt c/k 734: 8), *ḥa-ar-šu-ma-al-kà* (OIP 27, 49a: 1; OIP 27, 49b: 6), *ḥa-ar-šu-mi-il₅-kà* (kt o1/k 325b [1b]: 14).

598 *ḥa-ar-šu-um-nu-ma-an* (AKT 6a, 221: 4 (<*um-nu-*>), 10, 19; AKT 6c, 700: 9; TC 1, 84: 26; TC 1, 87: 26; kt m/k 24: 35 (-[*nu-ma-an*]); kt m/k 35: 34), *ḥa-ar-šu-nu-ma-an* (AKT 6a, 129: 30; AKT 6a, 222: 4, 20; AKT 10, 32a: 5; ATHE 2a: 3; ATHE 2b: 5 (*ḥa-ar*[-...])). Other attestations of “Ḥaršumnuman” are cited by OAPD for the unpublished texts kt f/k 80a; kt f/k 80b: 6; and kt 94/k 1210. Note that the attestation *ḥa-ar-šu-nu-ma-an* on AKT 10, 32a: 5 corresponds to the form *ša-ar-šu-nu-ma-an* on the accompanying envelope (AKT 10, 32b: 6). This latter form undoubtedly must be a mistake for *ḥa-ar-šu-nu-ma-an* (thus also Günbattu 2016 (= AKT 10): 74).

599 Thus also e.g. Bilgiç 1945–1951: 9 and Tischler HEG 1: 188. Cf. Del Monte & Tischler 1978: 91 for attestations of ^{URU}*ḥaršumna-*.

5.3.36 *ḥaši(a)-*

This element only occurs in the name *ḥašiuman* (g.u.),⁶⁰⁰ which contains the clearly Hittitoid element *-uman*. Goetze (1954a: 351) compared *ḥaši(a)-* to Hittite *ḥašši* *ÍD-i* ‘to the ... river’ (KUB 5.1 iii 66), of which he states that “*ḥašši-* (probably *i*-stem) should be a color, cf. the common *ÍD.SA₅* ‘Red River’, *ÍD.SIG₇* ‘Yellow River’” (o.c.: 351¹¹). However, nowadays the form *ḥašši* of KUB 5.1 iii 66 is interpreted not as an adjective belonging with *ÍD-i* ‘river’, but rather as a dat.-loc.sg. form of the noun *ḥāšša-* / *ḥaššā-* ‘fire-place’.⁶⁰¹ Since this word is not an *i*-stem, it cannot be connected with Kanišite *ḥaši(a)-*. I know of no other good Hittite comparandum for *ḥaši(a)-*, however.

5.3.37 *ḥa/išt(a)-*

This element occurs in the names *ḥa/ištaḥšu* (m.),⁶⁰² *ḥa/ištaḥšušar* (f.),⁶⁰³ *ḥaštali* (m.),⁶⁰⁴ *ḥaštašu* (g.u.),⁶⁰⁵ and *ḥištuman* (m.).⁶⁰⁶ As explained above (§ 3.2.3), the alternation in spelling between *ḥašt(a)-* and *ḥišt(a)-* points to an underlying form /hst(a)-/, which could be pronounced [hst(a)-] (spelled *ḥašt(a)-*) as well as [həst(a)-] (spelled *ḥišt(a)-*).

According to Goetze (1954a: 351), the name *ḥištuman* belongs either to the toponym ^{URU}*ḥaštuua*,⁶⁰⁷ or to Hittite ^É*ḥištā*, ^É*ḥištī*, a cultic building connected with death-rituals. The comparison to ^{URU}*ḥaštuua* is formally flawed since the element *ḥa/išt(a)-* does not contain a *u* or *w* (note that Goetze apparently did

600 *ḥa-ší-ú-ma-an* (AKT 10, 33a: 4; AKT 10, 33b: 3, 6; VS 26, 136: 10). Another attestation of “*Hašiuman*” is cited by OAPD for the unpublished text kt 94/k 1503.

601 E.g. Únal 1974: 74–5; Puhvel HED H: 222.

602 *ḥa-áš-ta-aḥ-šu* (ICK 4, I 541: 18; KTH 36: 4), *ḥi-iš-ta-aḥ-šu* (AKT 10, 21a: 19; AKT 10, 21b: 4 (-a[ḥ-š]u); AKT 10, 31a: 16; AKT 10, 31b: 3; AKT 10, 57a: 14; AKT 10, 57b: 1; AKT 10, 58a: 14; AKT 10, 58b: 2; ICK 1, 19a: 5, 13, 17, 22; ICK 1, 19b: 9, 13, 19; KKS 21b: 11, 21 (*ḥi-iš*[...]); KKS 21a: 4, 20; TC 3, 254: 3; kt 87/k 253: 1; kt 88/k 1003: 18).

603 *ḥa-áš-<ta>aḥ-šu-šar* (BIN 6, 225: 2), *ḥi-iš-ta-aḥ-šu-šar* (ICK 4, I 837: 4; kt n/k 74: 4 (<-aḥ->); kt n/k 749, 16). The emendation of *ḥa-áš-aḥ-šu-šar* (BIN 6, 225: 2) to *ḥa-áš-<ta>aḥ-šu-šar* was suggested by Jan Gerrit Dercksen (p.c.) and indeed solves the awkward so-called ‘broken’ spelling *-áš-aḥ-*, and makes it possible to see it as a by-form of the better attested *ḥištaḥšušar*.

604 *ḥa-áš-ta-li* (ICK 4, I 552: 3; KUG 6: 11; kt 88/k 1082: 8, 15), *ḥa-áš-ta-a-li* (AKT 3, 87: 58; VS 26, 121: rev. 19). Note that OAPD cites another attestation of “*Haštali*” for AKT 3, 84, but here we find in line 20 rather *ḥa-áš-ta-i-li*, which to my mind must be a different name (perhaps Hattic?).

605 Cited by OAPD for the unpublished text kt 93/k 672.

606 *ḥi-iš-tù-ma-an* (OIP 27, 59: 38).

607 Which Goetze cites for the unpublished Hittite text Bo 7110. Note that Del Monte & Tischler 1978 do not cite a toponym ^{URU}*ḥaštuua*.

not realize that *hištuman* could be connected with other names starting in *ha/išt(a)-*, so that for him the *u* of *-uman* in principle could belong to the initial element as well). The comparison to ^É*hištā*, ^É*hištī* is repeated by Zehnder (2010: 160),⁶⁰⁸ since “[d]er orthographische Wechsel *a* vs. *e/i* [in *ha/išt(a)-*] erinnert an Versuche, ^É*hešta-* sachlich und etymologisch mit heth. *haštai-* n. ‘Knochen, Bein’ zu verbinden”.⁶⁰⁹ In his view, a connection between the element *ha/išt(a)-* and Hittite ^É*hištā*, ^É*hištī* is confirmed by the correspondence between the Kanišite name *hištuman* and the Hittite noun ^{LÚ}*hištumna-* ‘person pertaining to the ^É*hištā*. Semantically, I do not find this connection very attractive, however: why would one want to name one’s child after a cultic building associated with death? Moreover, Zehnder does not explain what the exact reason would be for the fact that in Hittite there is a strict distinction between the word for ‘cultic building’, which is always spelled with an *-i-* (^É*hištā*, ^É*hištī*), and the word for ‘bone’, which is always spelled with an *-a-* (*haštai-*), whereas in the Kanišite names *a* and *i* interchange freely. As was explained in § 3.2.3, this interchange between *a* and *i* rather points to an underlying cluster, i.e. *ha/išt(a)-* = /hst(a)-/. I therefore do not think that a connection of this element to Hittite ^É*hištā*, ^É*hištī* has much merit.

However, a connection with the Hittite root *hašt-* as found in *haštai-* ‘bone; strength’ is more attractive,⁶¹⁰ and was in fact first proposed by Alp (1952: 135¹²⁰), who connected *haštali* to Hitt. *haštaliḫatar* ‘heroism, bravery’ (cf. also *haštaliēšš-zi* ‘to become brave), and states that the stem *hašt-* is also present in *ha/ištaḫšu*, *ha/ištaḫšušar* and *hištuman*. Also Goetze (1954a: 356⁶⁰), on the basis of a connection with Hitt. *haštili(ia)-* ‘brave, heroic’, states that the root *hašt-* had a metaphoric meaning ‘hero; strong, brave’,⁶¹¹ which is indeed a much more attractive semantic range for an onomastic element. If correct, *ha/ištaḫšu(šar)* /hstáhsu(s:r)/ would mean ‘brave-born’, *haštali* /hstál(:)i/ ‘brave one’, *haštašu* /hstás:u/ ‘brave-beloved’, and *hištuman* /hstomán/ ‘coming from strength’.

608 Zehnder does not refer to Goetze, but instead gives references to Bilgiç (1945–1951: 16–7) and Landsberger (1954: 58–9¹²⁰) as if they connect Kanišite *ha/išt(a)-* to Hitt. ^É*hištā* / ^É*hištī* as well. This is not the case, however: both scholars merely note that *hašt-* seems to alternate with *hišt-*, but do not mention ^É*hištā* / ^É*hištī* at all.

609 Zehnder cites “^É*hešta-*”, with *e* in the first syllable, but within Hittite this *e* is the outcome of an earlier *i*: all Old Hittite spellings of this word show ^É*hišt*°.

610 Note that Bilgiç (1945–1951: 17¹²⁶) remarks that “[d]er Anklang [of Kanišite *ha/išt(a)-*, A.K.] an heth. *haštai* „Knochen“ [...] ist wohl Zufall, denn die Verwendung dieses Wortes in Personennamen wäre kaum verständlich”. However, this does not take into account that *haštai-* can also be metaphorically used as denoting ‘strength’.

611 Similarly Landsberger (1954: 123), who states “*Hašt-* (*Hišt-*)*aḫšu* und *-šar* ‘Knochensohn, -tochter’, ‘stark’”.

5.3.38 *ḥašu(a)-*

This element occurs in the names *ḥašu'uman* (m.)⁶¹² and *ḥašuahšu* (g.u.).⁶¹³ Although OAPD cites the former name as “Hašuman”, and one might be inclined to assume that it therefore must consist of an element *ḥaš(a)-* in combination with *-uman*, the plene spelling of the *u*, *ḥa-šu-ú-ma-an*, rather points to a reading *ḥašu'uman*,⁶¹⁴ which means that the name consists of the elements *ḥašu(a)-* and *-uman*.

Since *-uman* can be equated with the Hittite ethnicon suffix *-umen- / -umn-* (cf. § 4.3.2 and 5.2.13), I want to propose that the first element of this name, *ḥašu(a)-*, should be equated with the toponym ^{URU}*ḥaššuṽa*.⁶¹⁵ If correct, we have to interpret *ḥašu'uman* as /has:uomán/ ‘coming from Ḥaššuṽa’ and *ḥašuahšu* as /has:uáhsu/ ‘son of Ḥaššuṽa; Ḥaššuṽa-born’. According to Dercksen (2014: 198), the name *ḥašua* (m.)⁶¹⁶ derives from this toponym as well.

5.3.39 *ḥašušar-*

This element occurs in the name *ḥašušarnika* (f.),⁶¹⁷ and can be identified with the independent names *ḥašušar* (f.)⁶¹⁸ and *ḥašušra* (f.).⁶¹⁹ It seems to be present in *ḥašušarna* (f.),⁶²⁰ as well, although an element *-na* does not otherwise occur in Hittitoid names.

As we have seen in § 5.2.7, the fact that in *ḥašušra* no vowel is spelled between the *š* and the *r* indicates that in all cases where we find an *a* between these consonants, this is in fact a dead vowel, and that *ḥašušar(-)* should be analysed as ending in a cluster */-sr(-)/*. Moreover, the element *ḥašušar-* is generally equated with *-ḥšušar*, which occurs as a second element of Hittitoid women's names, and which is generally equated with the Hittite word **ḥaššuš(ša)ra-* ‘queen’,

612 *ḥa-šu-ú-ma-an* (AKT 6a, 12: obv. 5, rev. 1 (-a[n]); kt 89/k 383a [1b]: 3; kt 89/k 383b [1b] (Günbatt 2014, nr. 13): 28).

613 *ḥa-šu-ah-šu* (kt 93/k 946: 6 (cf. Erol 2007: 18)). Note that OAPD cites for the unpublished text kt 93/k 946 a name “Hašušaḥšu”, but since it would be too coincidental to have both a *ḥašuahšu* and a *ḥašušaḥšu* in the same text, I assume that the form cited by OAPD is a typo.

614 Cf. the situation of *kapu'uman* as treated in § 5.3.65.

615 Cf. Del Monte & Tischler 1978: 97.

616 *ḥa-šu-a* (kt a/k 264: 25), *ḥa-šu-wa* (AKT 3, 52: 12; OIP 27, 1: 4). Note that the spelling *ḥa-šu-wa* could in principle be read *ḥa-šu-wi* as well, and then could be identical to the well attested men's name *ḥa-šu-i*.

617 *ḥa-šu-ša-ar-ni-kà* (AKT 10, 41a: 2 (-ar^l), 10; AKT 10, 41b: 5, 10).

618 *ḥa-šu-šar* (EL 36: 2; TC 1, 62 [1b]: 1 (-š[ar])); kt 89/k 369 [1b]: 31).

619 *ḥa-šu-uš-ra* (kt o/k 106: 6).

620 *ḥa-šu-ša-ar-na* (TCL 1, 242: 8, 12, 19).

under the assumption that this word originally meant ‘female descendant, daughter’ (cf. its treatment in § 5.2.7). All in all, we may analyse the mentioned names as follows: *ḥašušarnika* = /has:us:rnéka/ ‘daughter’s sister’ and *ḥašušar* / *ḥašušra* /has:us:r/ ‘daughter’.⁶²¹

5.3.40 *ḥat-*

This element occurs in the names *ḥataḥšu* (g.u.),⁶²² *ḥata<ḥ>šušar* (f.),⁶²³ *ḥatilka* (f.)⁶²⁴ and *ḥatuman* (g.u.).⁶²⁵ In his treatment of *ḥata<ḥ>šušar*, Zehnder (2010: 151) proposes that this name may represent an underlying form “**Ḥant-aḥšušar*”, and that it therefore could be connected with the Hittite word *ḥant-* ‘front, face’. However, as will be discussed in § 5.3.45, the Hittite sequence *-nta-* is in Kanišite names usually spelled with the sign DA, so if this name would be connected with Hitt. *ḥant-*, I would expect it to be spelled ***ḥa-da-aḥ-šu(-šar)*.

In his treatment of *ḥatilka*, Zehnder (2010: 153) assumes that this name consists of the elements *ḥati-* and *-lka*, and he proposes that the first element may be identical to the geographical name KUR^{URU}*ḥatti*. This interpretation would make the name *ḥatilka* isolated, since there is no other Kanišite name that starts in an element *ḥati-*. It therefore seems better to me to assume that *ḥatilka* represents an underlying /hatlka/ (with *ḥatilka* spelling the pronunciation [hatəlka]), and that the first element is *ḥat(a)-*, which we find in *ḥataḥšu*, *ḥata<ḥ>šušar* and *ḥatuman* as well.

621 I do not understand Zehnder’s considerations (2010: 149–50) when he argues that the element *ḥašušar-* in these names is rather to be equated with the theonym ^dMUNUS.LUGAL-*ra-*. Since the element *-ḥšušar* when used as the second element in compound names clearly does not refer to the deity ^dMUNUS.LUGAL-*ra-*, but rather represents the word’s original meaning ‘female descendant’, there can to my mind be no doubt that this is the origin of the independent names *ḥašušar* / *ḥašušra* and, by extension, the initial element *ḥašušar-*, too.

622 *ḥa-ta-aḥ-šu* (AKT 6b, 336: 21), *ḥa-ta-a-aḥ-šu* (AKT 6b, 302b: 7).

623 *ḥa-ta-<aḥ>-šu-šar* (kt j/k 39: 10). Since we are dealing with a woman’s name (cf. the verbal form *tašqul* ‘she paid’ in line 13), and since the sign combination *-šu-šar* in all other Kanišite personal names is always preceded by the sign *aḥ*, it seems permissible to emend the form *ḥa-ta-šu-šar* (as it is written on the tablet) to *ḥa-ta-<aḥ>-šu-šar* (thus also Bayram & Veenhof 1991–1992: 97, who transliterate “*Ha-ta-šu-šar*”, but translate “*Hata(h)šušar*”).

624 *ḥa-ti-il₅-kà* (TPAK 1.160: 1 (-il₅?-); kt 99/k 139a [1b]: 7; kt 99/k 139b [1b]: 5; kt 01/k 272 [1b] (Günbatt 2014, nr. 15): 15). Cf. § 5.2.10 for a discussion of the gender of the *ḥatilka* as attested on kt 99/k 139.

625 *ḥa-tu-ma-an* (AKT 10, 49a: 18; AKT 10, 49b: 2).

Nevertheless, Zehnder need not be incorrect in his idea to connect *ḫatilka* to KUR ^{URU}*ḫatti*. As Kryszewski (2015) has convincingly argued, the term *ḫatti* was never in use by the Hittites themselves. It in fact is the Akkadian genitive form of the name that in Old Assyrian texts is attested as *ḫattum*, and which in Hattic had the shape *ḫattuš* (from which later on Hittite *ḫattuša* is derived). The basic stem of *ḫattum* and *ḫattuš* must be *ḫatt-*, since this is the stem found in the Hittite word *ḫattili* ‘in Hattic’. I find it probable that this *ḫatt-* is present in the Kanišite names *ḫataḫšu(šar)*, *ḫatilka* and *ḫatuman*. We may then assume that these names represent /*hat:áhsu(s:r)*/ ‘Hattic child’, /*hat:ilk:á*/ ‘Hattic bright one’, and /*hat:omán*/ ‘coming from Ḫattum’, respectively.

5.3.41 *ḫatki(a)-(?)*

This element may be present in the name *ḫa²-at²-ki-a[ḫ²]-šu²* (kt 89/k 367 [1b]: 22), if this is read correctly at all. Since the reading of the name is uncertain, and since an element *ḫatki(a)-* does not occur anywhere else, I will not treat it any further.

5.3.42 *ḫil(a)-*

This element is only found in the name *ḫiluman* (g.u.).⁶²⁶ Since the element *-uman* is a clear Hittitoid element, we may assume that *ḫil(a)-* is Hittitoid, too. Formally, it may be connected with Hittite ^Ḫ*hīla-* ‘courtyard’. If correct, *ḫiluman* may represent /*hīlomán*/ ‘coming from the courtyard’.

5.3.43 [†]*ḫiwaš-*

Balkan (1973: 15) cites for kt c/k 1340: 18 the name “^Ḫ*Hi¹-ḫa-áš-me-i*”, which, if read correctly, would contain an initial element *ḫiwaš-* combined with the element *-mei*. However, there are several reasons to doubt the validity of this reading. First, an element *ḫiwaš-* is unattested elsewhere in the corpus of Kanišite names. Second, ^Ḫ*hi¹-wašmei* looks too much like the more often attested name *šīwašmei*, which contains an element *šīwaš-* that is attested in other names as well (cf. § 5.3.127). Since Balkan indicates that the first sign of the name is damaged, and since in the Old Assyrian version of the cuneiform script the sign ^ḪHI (𐎶) is relatively similar to the sign ŠÍ (𐎶), I assume that “^Ḫ*Hi¹-ḫa-áš-me-i*” is a misreading, and that we are in fact dealing with *šī-wa-áš-me-i*. I therefore assume that an element “*ḫiwaš-*” never existed.

626 *ḫi-lu-ma-an* (Oslo 32.446a (= Larsen & Møller 1991: 232): 3; Oslo 32.446b (= Larsen & Møller 1991: 233): 3, 4 (-*m[a-a]n*).

5.3.44 *ḫu(w)ia-*

This element only occurs in the name *ḫuialka* (f.), which is attested once with the strange spelling *ḫu-ú-i-a-al-kà* (kt o/k 39: 4). The plene spellings of both the *u* and the *a* are remarkable, and may be relevant for the phonetic interpretation of this name. At this moment, I have no interpretation to offer (cf. also Zehnder 2010: 162).

5.3.45 *ḫumad- / ḫumund-*

This element only occurs in the men's name *ḫumadašu* (m.),⁶²⁷ which may have a variant in the one attestation *ḫumundašu* (m.),⁶²⁸ as we will discuss below.

Since *ḫumad-* is not attested with any other Hittitoid element, its Hittitoid character cannot be independently assured. Nevertheless, it is generally assumed that *ḫumad-* must be equated with Hitt. *ḫūmant-* 'all, every' (thus first Bossert 1946: 158; cf. also e.g. Laroche 1951: 107; 1966: 321), which would yield for *ḫumadašu* the meaning "cher à tous" (Laroche 1966: 321). Semantically, this analysis is certainly appealing, and can therefore hardly be doubted. Formally, it has some interesting consequences.

First, the *-u-* of Hitt. *ḫūmant-* is consistently spelled plene with the sign U, and it therefore must represent a long /ō/, /hōm°/.⁶²⁹ However, since the Old Assyrian orthography does not distinguish between the vowels [u] and [o], nor between long and short vowels (cf. Chapter 3), it is unproblematic to assume that the Kanišite spelling *ḫu-m°* represents an underlying /hōm°/.

Second, the name *ḫumadašu* is in all its attestations (more than 40 times!) spelled with the sign DA, and never with the sign TA. As was discussed in § 3.2.10, this indicates that the dental stop in *ḫumadašu* was voiced, [d]. Although the citation form of Hitt. *ḫūmant-* is with a *-t-*, its dental stop was in fact voiced as well. This can be deduced from the fact that in its oblique cases, *ḫūmant-* is spelled both with the sign TA (*ḫu-u-ma-an-ta(-...)*) and with DA

627 *ḫu-ma-da-šu* (AKT 8, 237: 2; AKT 10, 2b: 4, 11; AKT 10, 17a: 21; AKT 10, 17b: 6; AKT 10, 45a: 2; AKT 10, 45b: 4, 6 (*ḫ[u-...]*); AKT 10, 57b: 5; AKT 10, 63a: 7 (-š[u]); AKT 10, 63b: 3 (*ḫu-ma-d[a-...]*); BIN 6, 17: 6; BIN 6, 236: 5; CCT 6, 27d: 1 (<-šu>); KKS 31a: 17; KKS 31b: 1; TC 1, 122 [1b]: obv. 1, rev. 1 ([*ḫ*u-]); TC 1, 99: 13; TC 2, 66: 8; TC 3, 240: 4; kt c/k 857: 16 (*ḫu-ma-[...]*); kt f/k 61 [1b]: 13; kt n/k 42 [1b]: 4 (*ḫu-ma-[...]*); kt 73/k 14 [1b]: 18; kt 87/k 253: 6; kt 89/k 365 [1b]: 8; kt 89/k 376 [1b]: 7; kt 89/k 379a [1b] (Günbatti 2014, nr. 4): 5, 11 ([...]-*da-šu*), 21 ([...-*m*]*a-da-šu*), 28; kt 89/k 379b [1b] (Günbatti 2014, nr. 5): 1, 8, 10, 23; kt 89/k 383a [1b]: 11, 18, 23, 32; kt 89/k 383b [1b] (Günbatti 2014, nr. 13): 14, 19, 26), *ḫu[-m]a-[d]a-a-šu* (TPAK 1, 93: 16). Another attestation of "Humadašu" is cited by OAPD for the unpublished text kt 86/k 153a-b.

628 *ḫu-mu-un-da-šu* (AKT 10, 42a: 3 (<-*da-*>); AKT 10, 42b: 1 (*ḫu-mu[-...]*), 8).

629 Kloekhorst 2014: 535.

(*hu-u-ma-an-da(-...)*), a spelling alternation that has recently been argued to represent the presence of a voiced stop [d].⁶³⁰ The Kanišite and the Hittite spellings thus form a direct match.

Third, the equation between Kanišite *humad-* and Hitt. *hūmant-* requires that *humad-* stands for an underlying form /hōmand-/ , the /n/ of which is unexpressed in all its attestations. Since we have seen in § 3.2.11 that Old Assyrian does not know clusters of the type *-nC-* and that therefore in Kanišite names such clusters seem to have been defectively spelled as *-C-* only, this assumption is not unreasonable. In fact, it may now be supported by a name that until recently remained unpublished, namely *humundašu* (m.), as found in AKT 10, 42a–b.⁶³¹ The editor of this text, Günbatti, assumes that *humundašu* is a variant of *humadašu*, since in his translation of AKT 10, 42a–b he renders *humundašu* as “Humadašu” (Günbatti 2016 (= AKT 10): 92).⁶³² This certainly seems attractive, as it would confirm the presence of a nasal in *humadašu* = /hōmandas:u/. It requires, however, that the presence of the *u* of *humundašu* vs. the *a* of *humadašu* is explained.

As we have seen above (§ 3.2.5), an alternation between *a* and *u* is found in more Kanišite personal names (e.g. *waršama* vs. *waršuma*), which was explained by assuming that in such cases the *a* functions as a ‘dead’ vowel in the spelling of a cluster, whereas the *u* functions as a phonetic prop-vowel [ə] that was coloured to *u* because of a labial environment. In this case, this would mean that both spellings represent an underlying /hōmndas:u/, which could be phonetically rendered as [hōmndas:u], spelled *hu-ma-da-šu*, as well as [hōmāndas:u], spelled *hu-mu-un-da-šu*. I must admit, however, that I feel uneasy about the fact that we have so many attestations (over 40) with *a* but only one tablet in which a spelling with *u* is found. Moreover, other personal names that may contain a sequence /C^{labial}nC/ consistently show spellings with *u*, not with *a* (*išpud-* / *šupud-*, *išpūn-* / *šapūn-* / *šupūn-*), which rather seems to indicate that in these names the *u* had already been phonologized (cf. the treatments of these elements below, in §§ 5.3.61 and 5.3.62).

A different way to explain the relationship between *humadašu* and *humundašu* is by assuming that the two are morphological variants. As I argued elsewhere,⁶³³ the Hittite adjective *hūmant-* was originally accentually

630 Kloekhorst 2013: 131–9. Note that in Hittite the voice was phonetic, not phonemic.

631 Cf. footnote 628 for exact attestation places. Interestingly, this text also contains the name *laknanḫašušar*, which is spelled with a *-nC-* cluster as well. Apparently, the scribe of AKT 10, 42a–b was capable of perceiving *-nC-* clusters and faithfully noted them down.

632 Although Günbatti, quite inconsistently, for one passage renders *humundašu* in his translation as “Humundašu”.

633 Kloekhorst 2014: 535.

mobile. In its direct cases, like nom.sg.c. *ḫu-u-ma-a-an-za*, it was accented on the suffix, /hōmánt-/ , whereas in its oblique cases, like gen.sg. *ḫu-u-ma-an-da-a-aš*, dat.-loc.sg. *ḫu-u-ma-an-ti-i*, it was accented on the ending, /-ndás/ and /-ndí/, respectively. This implies that originally the suffix was ablauting: *-Cónt- vs. *-Cnt- $\check{V}^{\circ}$. We therefore may assume that *ḫumadašu* represents /hōmandas:u/, in which /hōmand-/ derives from the stem with full grade of the suffix, **h₂eiu- $\check{u}$ ont-*, whereas *ḫumundašu* represents /hōmndas:u/,⁶³⁴ in which /hōmnd-/ reflects the stem with zero grade in the suffix, **h₂eiu- $\check{u}$ nt-*.⁶³⁵ Since it is clear that in Hittite, the strong stem /hōmánd-/ < **h₂eiu- $\check{u}$ ont-* is in the course of time ousting the weak stem /hōmənd-/ < **h₂eiu- $\check{u}$ nt-*, we may then assume that in Kaniš the name *ḫumundašu*, with the weak stem /hōmnd-/ , is archaic and had already within the Old Assyrian period been largely ousted by the renewed form *ḫumadašu* in which the strong stem /hōmand-/ was introduced.

5.3.46 *ḫupišn(a)-*

This element occurs only in the name *ḫupišnuman* (g.u.).⁶³⁶ It can clearly be related to the geographical name ^{URU}*ḫupiš(ša)na*,⁶³⁷ which can also be found in the men's name ^m*ḫupišnaili*, which is attested in Hittite texts from Ḫattuša.⁶³⁸ We may therefore assume that Kanišite *ḫupišnuman* can be interpreted as /hopis:nomán/⁶³⁹ 'coming from Ḫupišna'.

5.3.47 *ḫurl(a)-*

This element is only found in the man's name *ḫurluman* (m.),⁶⁴⁰ which is attested on one tablet only. It can clearly be equated with the geographical

634 Or rather /hōmundas:u/ if the vocalization of **n* to *un* in this position had already been phonologized, cf. § 5.3.61 and § 5.3.62.

635 The exact origins of Hitt. *ḫūmant-* are debated (cf. Puhvel HED H: 373f.; Kloekhorst 2008: 361), although the general idea is that it must reflect a formation ending in PIE **-ent-*. I myself have argued for a reconstruction **h₂eiu- $\check{u}$ ént-* 'containing the life-span' (Kloekhorst 2014: 535–6), which was reinterpreted as a participle form in **-ónt-* / *-nt-*.

636 *ḫu-pí-iš-nu-ma-an* (PLbg A: 28; kt b/k 260a: 2, 19; kt b/k 260b: 4, 9).

637 Del Monte & Tischler 1978: 117–9.

638 Laroche 1966: 72. Note that ^m*ḫupišnaili* has a clear Hattic character because it ends in *-ili* (cf. section 4.6).

639 The assumption that the first syllable contained an /o/ is based on the fact that in Hittite every (grapheme) *u* next to an *ḫ* seems to have been pronounced as /o/, cf. Rieken 2005; Kloekhorst 2008: 51–2. Likewise in the following names.

640 *ḫu-ur-lu-ma-an* (kt n/k 77: 5, 8). See Zehnder 2010: 14 for a discussion of the gender of the person bearing this name.

name (KUR) ^{URU}*hurla* ‘(the) Hurria(n land)’.⁶⁴¹ The name *hurluman* /horlomán/ therefore must have meant ‘coming from Hurrian land’.

5.3.48 ^(†)*huršun(a)-*

The name “Huršunuman” as cited by OAPD for the unpublished text kt 94/k 1497, seemingly contains an element *huršun(a)-*. However, since this tablet is unpublished and OAPD does not provide the exact spellings of the names it cites, it cannot at this moment be ascertained whether this name is spelled *hu-ur-šu-nu-ma-an* or *hur-šu-nu-ma-an*. If the latter spelling is the correct one, I would rather read the name as *har-šu-nu-ma-an* (note that the sign *ḪUR* has the value *ḪAR* as well), which would make it identical to the better attested *haršu(m)numan* (see the treatment of the element *haršumn(a)-* above). If the name is spelled *hu-ur-*, however, we would be dealing with an element *huršun(a)-*, for which I know of no possible cognates in Hittite.

5.3.49 *huši(a)-*

This element is only found in the man’s name *hušiuman* (m.),⁶⁴² which is attested on a single tablet only. Since *-uman* is a clearly Hittitoid element, we may expect that *huši(a)-* is Hittitoid, too. However, I know of no good Hittite comparandum.

5.3.50 *hušili(a)-*

This element is only found in the name *hušiliuman* (g.u.),⁶⁴³ which is attested several times. Since the element *-uman* is securely Hittitoid, we may assume that *hušili(a)-* is Hittitoid, too. According to Goetze (1954a: 351) it may be connected with Hittite *huššil(i)-/huššelli-/huššulli-* ‘clay pit’ (thus also Laroche 1966: 258).⁶⁴⁴ Although the combination of the appurtenance suffix *-uman* with a word denoting a location would make sense, it does not seem attractive to assume a personal name meaning ‘coming from the clay pit’. However, according to Gentili Pieri (1982: 24–33), the *huššili*-pit may have ritual connotations; if so, Goetze’s connection may have some merit after all.

641 Del Monte & Tischler 1978: 119–24. Cf. Zehnder 2010: 14.

642 *hu-šl-ú-ma-an* (AKT 10, 40a: 5; AKT 10, 40b: 4, 13).

643 *hu-šl-li-ú-ma-an* (OIP 27, 19a: 21 (<ú>-ma[-an])); OIP 27, 19b: rev. 2 ([*-ma-an*]); kt 73/k 14 [1b]: 25).

644 Cf. Puhvel HED H: 409 for this stem. Goetze translates this word as ‘clay pit’ (cf. Laroche’s ‘glaisière’, i.e. ‘clay pit’), but Puhvel translates ‘pit, dump’.

5.3.51 *hutr(a)-*

This element is only attested in the name *hutruman* (m.),⁶⁴⁵ which is attested once. According to Dercksen (2014: 198), it may be derived from the toponym *hutura*.⁶⁴⁶ This requires a syncope of the second *u*, which may not be impossible, however (cf. section 9.2).

5.3.52 *huzia-*

This element occurs in the names *huziašu* (g.u.)⁶⁴⁷ and *huziuman* (g.u.)⁶⁴⁸ It also seems to occur on its own, namely as *huzia* (g.u.).⁶⁴⁹ This latter name is equated by Laroche (1966: 74–5) with the Hittite men's name ^m*huzziia*, which is known as the name of, among others, several Old Hittite kings. If correct, the two compound names may be interpreted as follows: *huziašu* /hotsiás:u/ 'beloved by Huzziia' and *huziuman* /hotsiomán/ 'stemming from Huzziia'.

5.3.53 [†]*ia-*

This element is only found in the name *ianika* (g.u.)⁶⁵⁰ which is attested on a single tablet and corresponding envelope only. Since the element *-nika* is well attested, this name has already since Laroche (1966: 307) been analysed as *ia-nika*, the first element of which has been identified by Zehnder (2010: 169) as identical to the theonym ^d*iia* (Zehnder 2010: 82).

I have doubts about this interpretation, however. In fact, I doubt the entire existence of this name. Although on the tablet of OIP 27, 49 the name *ianika* is clearly visible (*i-a-ni-kà*, line 3), on the corresponding envelope, the name is broken. In his transliteration of the envelope, Gelb (1935: 15) gives this form as “[*I-a-*]ni-*ga*”. However, if we look at the hand copy of this tablet (compare also its photograph as printed on the leaves between page 8 and 9 of OIP 27), we see that in fact a trace of the first sign of this name is still visible: *i*[-...]. Moreover,

645 *hu-ut-ru-ma-an* (kt o/k 172b: 8).

646 As attested in kt j/k 97: 52, cf. Günbattı 1997: 135.

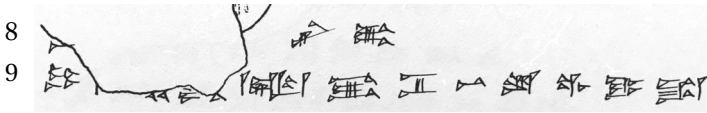

647 *hu-zi-a-šu* (kt c/k 171: 11).

648 *hu-zi-ú-ma-an* (AKT 10, 50a: 12; AKT 10, 50b: 2 (*hu-z[i-...]*); kt c/k 34: 8). Note that Forlanini 2010: 122³⁴ cites a “*Hu-zi-ú-ma-an*” for kt d/k 28a (= AKT 10, 40), but here we find *hu-št-ú-ma-an* (AKT 10, 40a: 5; AKT 10, 40b: 4) instead.

649 *hu-zi-a* (AKT 10, 60a: 12; BIN 6, 140: 7; CTMMA 1, 96: 15; KTH 18: 26; kt c/k 734: 7), *hu-zi-a-áš* (AKT 10, 60b: 7 (although it cannot be excluded that the sign *áš* belongs to the name following)), *hu-zi-áš* (kt a/k 906: 21 (since this text is unpublished, it cannot be determined what context this name occurs in, and whether its *-(a)š* may be seen as a Hittitoid case ending)).

650 *i-a-ni-kà* (OIP 27, 49a: 3), *i*[-*a-*]ni-kà (OIP 27, 49b: 8). See below for criticism on these readings, however.

we see that the gap between $\dot{i}[-...]$ and the signs $-ni-kà$ is rather large, cf. the hand copy and its transliteration:

8 $\dot{i}[- \dots]-ni-kà$

9 $i-l[\acute{a}-]l\acute{i}-al-kà \acute{u} p\acute{i}-ru-wa DUMU \acute{s}a$

Directly below $\dot{i}[-a]-ni-kà$ the name $i-l[\acute{a}-]l\acute{i}-al-kà$ (line 9) is found, which extends over more or less the same width as $\dot{i}[-a]-ni-kà$ does. According to the hand copy, the two signs $-lá-li-$ of $i-l[\acute{a}-]l\acute{i}-al-kà$ would occupy the same amount of space as the $-a-$ of $\dot{i}[-a]-ni-kà$ would. This does not seem credible to me: $L\acute{A}$ (𐎶) and especially LI (𐎶𐎵) are broad signs, whereas A (𐎶) is a narrow one. Even if the stamp seal that is partly visible on the tablet extended into line 8, the room between $\dot{i}[-...]$ and $...]-ni-kà$ would still be too large to be filled by the sign A only. There seems to be room for at least two signs: $\dot{i}[-x-x]-ni-kà$.

I therefore propose that we should read the name on the envelope as $\dot{i}[-a-ta]-ni-kà$, and emend the name on the tablet to $i-a<-ta>-ni-kà$. In this way, it is identical to the name *iatanika* that is attested quite well, and the first element of which is also found in another Hittitoid name (*iatalka* / *iatilka*). See the following paragraphs for a treatment of these elements.

5.3.54 *iant(a)-*

This element only occurs in the name *iantašue* (f.),⁶⁵¹ which is attested in one text only. Formally, one could think of a connection with Hitt. ^{UDU}*īiant-* ‘sheep’ or the participles *īiant-* ‘marching’ and *īiant-* ‘doing, making’. It is problematic, however, that the Kanišite name is spelled with the sign TA , implying the presence of a voiceless stop /t/, whereas e.g. in *humadašu* ~ Hitt. *hūmant-* we consistently find spelling with the sign DA , i.e. /d/. Moreover, the semantics of all three Hittite lexemes are not self-evident as an onomastic element.

It cannot be excluded that *iant(a)-* is in fact identical to the element *iat-* (also containing a /t/) that is treated in the next lemma.

⁶⁵¹ *i-a-an-ta-áš-we* (AKT 9a, 90: 5, 9).

5.3.55 *iat-*

This element is found in the names *iatalka* / *iatilka* (f.).⁶⁵² and *iatanika* (f.).⁶⁵³ The alternation between *iatalka* and *iatilka* shows that underlyingly we are dealing with a form /iatlka/, which implies that the second *a* in *iatanika* is a linking *-a-*: *iat-a-nika*. Since both *-lka* and *-nika* are clear Hittitoid elements, we would expect that *iat-* is Hittitoid, too. However, I know of no good Hittite comparandum (cf. Zehnder 2010: 171, who calls *iat-* “unklar”). Cf. the preceding paragraph for a possible connection with the element *iant(a)-*.

5.3.56 *ihili(a)-*

This element is only found in the name *ihiliuman* (g.u.),⁶⁵⁴ which is attested only once. Since the element *-uman* is clearly Hittitoid, we may expect that *ihili(a)-* is Hittitoid, too. However, I know of no good Hittite comparandum.

5.3.57 *ilali(a)-*

This element occurs in the assuredly Hittitoid names *ilaliaḫšu* (m.).⁶⁵⁵ *ilali(a)lka* (g.u.),⁶⁵⁶ and *ilaliuman* (m.).⁶⁵⁷ It appears to be present in the name *ilališka(n)* (m./f.),⁶⁵⁸ as well, and is also found as an independent name, *ilali(a)* (m.).⁶⁵⁹

The name *ilaliuman* has a parallel in Hittite, namely in the men's name ^m*ilālium(m)a*,⁶⁶⁰ which confirms its status as a Hittitoid name. The name *ilali(a)* may have a parallel in the theonym ^d*ilali-* as found in texts from

652 *i-a-ta-al-kà* (ICK 2, 221: 2 ([*i-a*]-*ta-*); ICK 4, 1 513: 5 (<*ta-*>), 9, 11; VS 26, 125: 15, 17 (*i-a*[-...]; kt o/k 40: 3, 8), *i-a-tal-kà* (kt c/k 734: 7; kt 87/k 145: 11 (courtesy K. Hecker)), *i-a-ti-il₅-kà* (kt m/k 101: 3 (cf. Hecker 2008: 102⁴)). Another attestation of “*Iatalka*” is cited by OAPD for the unpublished text kt 91/k 421.

653 *i-a-ta-ni-kà* (OIP 27, 49a: 3 (<*ta-*>); OIP 27, 49b: 8 ([*i-a-ta-*]); TC 1, 62 [1b]: 3; kt c/k 681: 13, 18). Cf. § 5.3.53 for the two attestations of OIP 27, 49. Veenhof (1998: 153) reads the form from TC 1, 62: 3 with *-l_i-* instead of *-ni-* (“*Jataligga*”), but this is unfounded, cf. the discussion in § 5.2.12.

654 *i-ḫi-li-ú-ma-an* (kt f/k 81: 4).

655 *i-lá-li-aḫ-šu* (AKT 10, 15a: 12; AKT 10, 15b: 2 ([...]-*lá-li-aḫ-šu*); BIN 4, 146: 24; C 7 Landsberger: 10; CCT 5, 23c: 3; ICK 1, 83: 24; KTH 37: 12, 17; kt m/k 102: 4), *i-lá-li-a-aḫ-šu* (RA 59, p. 40 nr. 16: 24; VS 26, 125: 3 ([*i-*])). Another attestation of “*Ilaliaḫšu*” is cited by OAPD for the unpublished text kt k/k 32.

656 *i-lá-li-il₅-kà* (OIP 27, 49a: 4), *i-l[á-]li-al-kà* (OIP 27, 49b: 9).

657 *i-lá-li-ú-ma-an* (AKT 6c, 713: 3; AKT 8, 21: 19; KTH 37: 17; kt c/k 1340: 15; kt 73/k 14 [1b]: 19).

658 Cf. footnote 981 for an overview of attestations.

659 *i-lá-li* (ICK 2, 12: 9; kt c/k 270: 20; kt c/k 453: 22; kt c/k 839: 104); *i-lá-li-a* (RA 59, p. 40 nr. 16: 19); *i-lá-l_i-a* (JCS 14, 5: 33). Another attestation of “*Ilalia*” is cited by OAPD for the unpublished text kt 94/k 372.

660 Cf. footnote 483 for attestations.

Ḫattuša.⁶⁶¹ According to Laroche (1959: 126), ^d*ilali*- is the Luwian version of the Hittite theonym ^d*ilālianteš* (always in the plural, cf. also Palaic ^d*ilaliantikeš*),⁶⁶² which is attested in Kaniš as well: in kt k/k 1 [1b]: 5 we read about GUDU₄ *ša i-lá-li-an-ta* ‘the priest of *ilalianta*’.⁶⁶³ Therefore, Laroche (1966: 288) assumes that the element *ilali(a)*- as found in the Kanišite personal names *ilali(a)*, *ilaliaḫšu*, *ilali(a)lka*, *ilališka(n)*, and *ilaliuman* can be equated with the theonym *ilali(a)*-, of which he says that it might have a Hattic origin (1966: 288²⁷).⁶⁶⁴

According to Zehnder (2010: 173) the interpretation of the element *ilali(a)*- as a theonym is “sehr plausibel” for the men’s name *ilaliaḫšu*, since in e.g. *piruahšu* the second element *-ḫšu* combines with a theonym as well (cf. the treatment of *pirua*- below). However, Zehnder is more sceptical about a theophoric interpretation of the names *ilali(a)lka* and *ilaliuman*, and denies this possibility for *ilališka(n)*. In Zehnder’s view (2010: 174–5), the name *ilališka(n)* cannot be separated from Hittite ^{*}*ilališkant*-,⁶⁶⁵ which is the participle of *ilāliške/a*-^{zi}, the imperfective stem of the verb *ilālije/a*-^{zi} ‘to wish, to desire’. This would give for Kanišite *ilališka(n)* the meaning “der/die vielerwünschte”, which indeed is an attractive meaning for a personal name (cf. § 6.1.4 for a more extensive treatment of this name).

To my mind, the consequence of this analysis of *ilališka(n)* is that also in the other names the element *ilali(a)*- must be equated with the Hittite verbal stem *ilālije/a*- ‘to desire, to wish’, as was already assumed by e.g. Goetze 1954a: 353, Landsberger 1954: 123 (*ilaliaḫšu* “begehrter Sohn”) and Kronasser 1959: 61. This is indeed an attractive interpretation, and we may therefore interpret the other names as follows: *ilali(a)lka* ‘desired-bright one’; *ilaliuman* ‘coming from desire’.

Moreover, an equation with *ilālije/a*-^{zi} may explain the formal peculiarity regarding *ilali(a)lka*. This name is attested in two variants, namely one spelled *i-lá-li-il₅-kà*, and one spelled *i-l[á-]li-al-ka* (attested on a single pair of tablet and envelope, OIP 27, 49), which are not easy to interpret as representing a single underlying phonological form. If we would read *i-lá-li-il₅-kà* as *i-lá-li-el-kà* (note that *il₅* = *el*), however, we would have an alternation between *ilalie-lka* and *ilalia-lka*, which is reminiscent of the alternation between *ašie-t* and *ašia-t*, and between *na/ikilie-t* and *na/ikilia-t*. Since, as will be argued in section 7.1, the latter two pair names can be derived from Hittite verbal stems ending in

661 Nom.sg. ^d*i-la-li-iš* (KUB 35.111 obv. 9, KUB 48.99, 14).

662 See attestations in Van Gessel 1998: 182.

663 Donbaz 1989: 83; Zehnder 2010: 173.

664 Retracting his earlier view (Laroche 1947: 74) that the name ^d*ilālianteš* derives from the participle of the Hittite verb *ilālije/a*- (cf. the next paragraph).

665 Although this form is not attested as such in Hittite.

-*iġe/a-*, it is an attractive option that the element underlying *ilalie-lka* / *ilalia-lka* is an original verbal stem in -*iġe/a-* as well. I regard this as an extra argument in favour of interpreting the element *ilali(a)-* (now rather to be cited as *ilalie/a-*) as being identical to the Hattuša Hittite verbal stem *ilāliġe/a-* ‘to wish, to desire’, instead of viewing it as representing the theonym ^d*ilali-* (as Laroche argued).

All in all, we may analyse these names as follows: *ilali(a)* / *ilāli(a)* / ‘desire’; *ilaliahšu* / *ilāliáhšu* / ‘desired child’; *ilaliaalka* / *ilālialk:á* /, *ilalielka* / *ilālielk:á* / ‘desired-bright one’; *ilališka(n)* / *ilālisk:án(d)* / ‘much desired one’; *ilaliuman* / *ilāliomán* / ‘coming from desire’.

5.3.58 *inar-*

This element occurs in the names *inarahšu* (m.),⁶⁶⁶ *inarahšušar* (f.),⁶⁶⁷ and *inarmei* (m.).⁶⁶⁸ It seems to be identical to the men’s name *inar* (m.),⁶⁶⁹ which is well attested.⁶⁷⁰ This latter name also occurs in a Hittite text as ^m*i-na-ar* (KBo 5.7 rev. 5).⁶⁷¹ On the basis of this latter spelling, we may assume an underlying form /inar/, with single /-n-/. Note that both *inar* and *inarmei* indicate that *inarahšu* should be interpreted as containing a linking -a-: *inar-a-hšu*.⁶⁷²

666 *i-na-ra-aḫ-šu* (AKT 10, 46a: 15; AKT 10, 46b: 6; AKT 10, 61a: 17; AKT 10, 61b: 3; TC 3, 191: 15; kt 87/k 253: 5; kt 91/k 123: 9, 12).

667 *i-na-ra-aḫ-šu-šar* (AKT 10, 11a: 4; AKT 10, 11b: 3 (*i-n[a-ra-a]ḫ-šu-[š]ar*), 8).

668 *i-na-ar-me-i* (AKT 10, 47a: 11; AKT 10, 47b: 1; kt c/k 1641: 20; kt f/k 62: 12; kt m/k 24: 27; kt m/k 35: 25; kt r/k 19: 24; kt 87/k 285: 5), *i-na-ar-me-e* (AKT 9a, 80: 3). Another attestation of “Inarmi” is cited by OAPD for the unpublished text kt 91/k 283.

669 *i-na-ar* (AKT 1, 21: 1; AKT 3, 41: 2, 8, 12, 15; AKT 4, 47: 3; AKT 6c, 694: 16 (-arⁱ (text: -aḫ)); AKT 6c, 695: 10, 24; AKT 6c, 698: 15; AKT 9a, 91: 11; AKT 10, 46b: 5 (-a[r]); AKT 10, 52: 17; AKT 10, 60a: 3; AKT 10, 60b: 5, 10; ATHE 67: 6; BIN 4, 22: 33 (if read correctly; Hecker aATU interprets this line differently than e.g. CDLI does); ICK 1, 172: 4; KKS 31b: 6; KTP 43 [1b]: 25; OIP 27, 34: 7 ([-na-]); TC 1, 122 [1b]: rev. 11; kt c/k 857: 7; kt e/k 167 [1b]: 3; kt g/t 35 [1b]: 30; kt g/t 36 [1b]: 1; kt k/k 14b [1b]: 17; kt n/k 31 [1b]: obv. 3; kt n/k 32 [1b]: 10, 28, 49; kt n/t 2100: 3, 6; kt o/k 39: 2; kt p/k 5 [1b]: rev. 3; kt r/k 15 [1b]: 30; kt s/t 92 [1b]: rev. 11; kt v/k 152: 10; kt 87/k 285: 9, 14, 20, 21; kt 87/k 303: 1; kt 87/k 312: 5; kt 89 k/ 365: 10; kt 89/k 370 [1b]: 8; kt 89/k 376 [1b]: 1; kt 89/k 379a [1b] (Günbattı 2014, nr. 4): 26 ([...-a]r); kt 89/k 383a [1b]: 12, 18 (i-), 32; kt 89/k 383b [1b] (Günbattı 2014, nr. 13): 18, 25; kt 99/k 138a [1b]: 1; kt 99/k 138b [1b]: rev. 7; kt 01/k 247a [1b] (Günbattı 2014, nr. 6): 31 (-na-ar); kt 01/k 247b [1b] (Günbattı 2014, nr. 7): 26 (i[-...]); kt 01/k 319a [1b] (Günbattı 2014, nr. 9): 2, 33 (-a[r]); kt 01/k 319b [1b] (Günbattı 2014, nr. 10): 25, 26 (i[-...])). Other attestations of “Inar” are cited by OAPD for the unpublished texts Kayseri 316; kt 87/k 259; kt 91/k 283; kt 94/k 1112; kt 94/k 1527; and kt 94/k 1666.

670 To what extent the name *inarma* (m.) (*i-na-ar-ma* (kt g/t 36 [1b]: 2)) belongs here, too, is unclear to me.

671 Cf. Laroche 1966: 79 for the equation of Kanišite *inar* (m.) to Hitt. ^m*inar*.

672 The name *inarawa(n)* (m.) might be Hittitoid, too, but need not be related to these names. Cf. § 6.1.5 for its own treatment.

It was already Bilgiç (1945–1951: 17), who stated that *inar* should be equated with ^d*inar(a)*-, the name of the tutelary deity (^dLAMMA) of Ḫattuša,⁶⁷³ a connection that has been followed ever since.⁶⁷⁴ The name of this deity originally was ^d*inār* (spelled ^d*i-na-a-ar* as well as ^d*i-na-ar*), but it was within the course of time thematized to ^d*inara*-.⁶⁷⁵ The plene spelling of the *a* in ^d*i-na-a-ar* indicates that this vowel was accented: /inár/ (originally /inár/?).

It is problematic, however, that ^d*inar(a)*- is a female deity,⁶⁷⁶ whereas Kanišite *inar* and Hittite ^m*inar* refer to men. According to Zehnder (2010: 40) this can be explained by assuming that the personal name *inar* functions as a “Kurznam” of an original compound name with male reference, like *inaraḫšu*. This is a plausible solution, although it cannot be denied that in Kanišite texts *inar* is much more often attested than *inaraḫšu*.

All in all, we can analyse all names mentioned above as follows: *inar* /inár/ (or /inár/? ‘Inar’ (abbreviation of e.g. *inaraḫšu*); *inaraḫšu* /inaráhsu/ (or /ināráhsu/? ‘son of (tutelary deity) Inar; “Inar-born”’;⁶⁷⁷ *inarmeī* /inarmeī/ (or /inārmeī/? ‘Inar-Mei(?)’.

5.3.59 *ip*-

This element is only attested in the name *ipmeī* (g.u.),⁶⁷⁸ which is attested only once. I know of no good Hittite comparandum (likewise Zehnder 2010: 6–7: “rätselhaft”).

5.3.60 *ipi(a)*-

This element is only found in the name *ipiaḫšu* (g.u.),⁶⁷⁹ which is attested only once. Since *-ḫšu* is a clear Hittitoid element, we may expect that *ipi(a)*- is Hittitoid, too. Formally, it resembles the Ḫattuša Hittite noun ^{GIŠ/Ú}*ippiā*- ‘(grape)vine’, but the semantic side of such a connection may be less appealing.

673 Cf. e.g. McMahon 1991: 24–7; Haas 1994: 450.

674 E.g. Goetze 1954a: 356; Landsberger 1954: 123; Zehnder 2010: 40.

675 Cf. the attestations gathered in Van Gessel 1998: 187–91.

676 At least, originally. Cf. McMahon 1991: 26–7 for the fact that after the Old Hittite period, ^dLAMMA, also when it certainly can be identified with ^d*inar(a)*-, has become a male deity. According to him, this may be due to a confusion between ^d*inara*- and the Hittite stem *in(n)ara*-, which means ‘strength, vigor’ (Laroche 1980–1983: 455).

677 Cf. Landsberger’s translation “Engelssohn” (1954: 123).

678 *ip-me-i* (kt i/k 109: 12 (cf. Balkan 1973: 15)).

679 *i-pi-a-aḫ-šu* (kt c/k 11: 29).

5.3.61 *išpud-* / *šupud-*

This element occurs in the names *išpudaḥšu* / *šupudaḥšu* (m.)⁶⁸⁰ and *šupudašmei* (m.).⁶⁸¹ These name can be equated with the names ^m*išpudaḥšu*.⁶⁸² and *išpudašmei*,⁶⁸³ respectively, as are attested in Hittite texts from Ḫattuša. Since in these latter names the dental stop is spelled single and with the sign DA,⁶⁸⁴ it must be a single voiced stop [d].⁶⁸⁵ This fits the fact that Kanišite *išpudaḥšu* / *šupudaḥšu* is consistently spelled with the sign DA, which points to the presence of a voiced [d], as well (the spelling of Kanišite *šupudašmei*, *šu-pu-daš-me-i*, is ambiguous, as the sign DAŠ can be read TAŠ as well). As we have seen in § 3.2.4, the alternation in spelling between *išp-* and *šup-* points to an underlying cluster /sp-/.

According to Goetze (1954a: 356), the element *išpud(a)-* / *šupud(a)-* is “theophorous”, and he states that “[t]here can hardly be any doubt that the god *Išputa-* must be connected with [Hitt.] *Išpant-* ‘night’, likewise venerated as a deity”.⁶⁸⁶ As we have seen above as well (cf. the treatment of *-mei* in § 5.2.11), this interpretation of *išpud(a)-* / *šupud(a)-* as a noun fits the fact that in Kanišite *šupudaš-me-i* ~ Hitt. *išpudaš-me-i* and in Hittite ^m*išpudaš-inar(a)-*, the element *išpudaš* / *šupudaš* appears to function as the genitive form of a noun *išpud-* / *šupud-*. Moreover, *išpudašmei* / *šupudašmei* ‘*mei* of the night(-god)’ would thus form the pendant to the name *šiwašmei* ‘*mei* of the (day-)god’, cf. § 5.2.11, 5.3.127 and 5.3.128.⁶⁸⁷

680 *iš-pu-da-aḥ-šu* (ICK 1, 115: 8; ICK 2, 15 (= envelope to ICK 1, 115): 9 ([iš-])), *šu-pu-da-aḥ-šu* (kt 89/k 365 [1b]: 6; kt 89/k 383a [1b]: 6, 17, 22, 30; kt 89/k 383b [1b] (Günbattu 2014, nr. 13): 1, 10, 17, 24). Günbattu 2014: 74, 144 cites a spelling “*Šu-pu-da-a-aḥ-šu*” for kt 89/k 383b [1b]: 17, but on the photograph of this tablet (*ibid.*: 189) it clearly reads *šu-pu-da-aḥ-šu*, without plene spelling of the *a*.

681 *šu-pu-daš-me-i* (kt r/k 21 [1b] (= Günbattu 2014, nr. 16): 1). Günbattu 2014: 82, 152 cites this name as “*Šu-pu-ur-me-i*”. However, since the sign UR can be read TAŠ / DAŠ as well, it seems attractive to me to assume that this name is in fact *šu-pu-daš-me-i*, in which way it can be equated to the Hittite personal name *išpudašmei* (cf. footnote 683).

682 Stem form ^m*iš-pu-daḥ-šu* (KUB 4.76, 9; KUB 31.82, 11; TARS 1 (cf. Goetze 1936)), nom.sg. ^m*iš-pu-daḥ-šu-uš* (KBo 3.35 i 12; KUB 31.81 ii 2 (-*daḥ-šu-*), 10), ^m*iš-pu-da-aḥ-šu-uš* (KUB 30.42 iv 15), acc.sg. ^m*iš-pu-daḥ-šu-un* (KBo 3.35 i 6 ([...]-*šu-un*), 13), gen.sg. ^m*iš-pu-daḥ-šu-aš* (KUB 31.81 i 8).

683 *iš-pu-da-aš-me-i* (StBoTB 4.23 obv. 7 (*iš-*); StBoTB 4.71 obv. 5 ([*iš-*)).

684 Note that the sign TAḪ, which, too, is used in the spelling of ^m*išpudaḥšu-*, can be read *taḥ* as well as *daḥ*. My choice to read *daḥ* here is based on the other spellings of this name with the sign DA, but in principle arbitrary: it does not provide extra information on the phonetic nature of the underlying consonant.

685 Kloekhorst 2013: 139–40.

686 Cf. Van Gessel 1998: 204 for Hitt. ^d*išpant-* ‘night-god’.

687 The element *išpudaš* seems to be present in the name of the mountain ^{HUR.SAG}*išpudaštēya-* as well (attested in the Hittite text KBo 15.46 rev.² 5, cf. Del Monte & Tischler 1978: 150).

Phonologically, a connection between Kanišite *išpud(a)-* / *šupud(a)-* and Hitt. ^d*išpant-* implies that the former represents /spund(a)-/, with the sign DA spelling a cluster /nd/ (cf. § 5.3.45 for a similar situation in *humad-*).⁶⁸⁸ Moreover, we would have to assume that the *-u-* between the *p* and the *d* in *išpud(a)-* / *šupud(a)-* is in fact the epenthetic vowel /ə/ that was rounded to *-u-* because it stood next to the labial consonant *p*. As will be explained in the next lemma, it is quite well possible that in this name the *-u-* had already been phonologized, and that *išpud(a)-* / *šupud(a)-* in fact represents /spund(a)-/, which could be pronounced [əspund(a)-], spelled *išpuda-*, or [səpund(a)-], spelled *šupud(a)-*.

Etymologically, Hitt. ^(d)*išpant-* ‘night’ is generally thought to go back to a preform **k^wsp-ent-* (an **-ent-*-derivative of PIE **k^wsep-* as found in Skt. *kṣáp-* ‘night’).⁶⁸⁹ Kanišite /spund-/ would then reflect a zero-grade formation **k^wsp-nt-*.

All in all, if we follow Goetze’s proposal, we can analyse *išpudaḥšu* / *šupudaḥšu* as /spund-á-hsu/ ‘night-born’ and *šupudašmei* as /spundas-mei/ ‘mei of the night(-god)’. Cf. section 9.3 for an explanation of the shape of the Hattuša Hittite names ^m*išpudaḥšu-* and *išpudašmei*.

5.3.62 *išpun-* / *šapun-* / *šupun-*

This element occurs in the names *išpunaḥšu* / *šapunaḥšu* / *šupunaḥšu* (m.)⁶⁹⁰ and *išpunuman* / *šupunuman* (m.).⁶⁹¹ As we have seen in § 3.2.4, the different spellings *išp-*, *šap-* and *šup-* indicate the presence of an initial cluster /sp-/.

The origin of the element *-tēua-* is unclear however: the formal resemblance to Lith. *tėvas* ‘father’ may be nothing more than coincidence.

688 See section 9.3 for the absence of a nasal in the Hittite names ^m*išpudaš-inar(a)-* and *išpudaš-mei*.

689 Kloekhorst 2008: 404, with references.

690 *iš-pu-na-aḥ-šu* (AKT 10, 22a: 7; AKT 10, 22b: 7; KKS 8a: 14; KKS 8b: 3, 14), *ša-pu-na-aḥ-šu* (AKT 10, 1a: 3; AKT 10, 1b: 7, 11; kt t/k 9: 2), *šu-pu-na-aḥ-šu* (AKT 6a, 141: 31; AKT 6a, 142: 24 (<-šu>); AKT 6c, 699: 14; AKT 10, 20a: 13; AKT 10, 20b: 3; ATHE 75: 4, 11; CCT 1, 10b–11a: 2; CCT 1, 23: 10; KTK 106: 6, 17; OIP 27, 49a: 19 (-šū); OIP 27, 49b: 4, 13, 19, 24; TC 1, 68: 2; TC 1, 87: 35; TC 2, 73: 12 (<-šu>); kt f/k 59b [1b]: 1, 11; kt f/k 96 [1b]: 1 ([...-a]ḥ-šu), 13, 17, 20; kt h/t 330 [1b]: 16; kt m/k 24: 24, 39; kt m/k 35: 22, 38; kt n/k 1858: 1; kt n/k 31 [1b]: obv. 8; kt n/k 72: 5; kt n/t 2100: 1, 7, 11; kt v/k 152: 1). Other attestations of “*Išpunaḥšu*” are cited by OAPD for the unpublished texts kt 89/k 293, kt 94/k 1096 and kt 94/k 1176 (moreover, OAPD cites a broken name “*Išpuna[]*” for kt 94/k 856, which may be read as *išpuna[ḥšu]*); another attestation of “*Šabunaḥšu*” is cited by OAPD for kt 94/k 1527; another attestation of “*Šubunaḥšu*” is cited by OAPD for kt 94/k 1495, and of “*Šupunaḥšu*” for kt 91/k 208.

691 *iš-pu-nu-ma-an* (AKT 8, 315: 10; ATHE 6e: 1 ([iš-p]u-), 6; ATHE 6t: 3); C7 Landsberger: 7 (-p[u]-); CCT 5, 34b: 30; CTMMA 1, 90a: 3; CTMMA 1, 90b: 3, 5; ICK 1, 30a: 1, 5, 9; ICK 1, 30b: 4; ICK 1, 60: 4; KTB 9: 6, 12 (iš-); TC 3, 254: 5, 11; TC 3, 255a: 5, 10; TC 3, 255b: 1 (iš[...]), 9 (-m[a-an]), 13 (-[ma-an]); kt f/k 61 [1b]: 12; kt 73/k 14 [1b]: 22; kt 86/k 90: 4 ([i]š-), 6; kt 87/k 266:

It is interesting that the name *išpunuman* seems to have a counterpart in Hittite texts, namely ^m*išpun(n)ūma*.⁶⁹² This name shows in half of its attestations geminate spelling of its *n*, indicating that it was a long consonant, /n:/. We therefore may analyse the Kanišite element *išpun(a)-* / *šapun(a)-* / *šupun(a)-* phonologically as /spun:(a)-/, with /n:/, as well. Interestingly, the element *išpunn-* also occurs in another Hittite word, namely ^{LÚ/MUNUS}*išpunnala-*, a cult functionary.⁶⁹³ We will get back to the meaning of this word later on.

It is not easy to find a good Hittite comparandum for /spun:(a)-/.⁶⁹⁴ However, I believe that an analysis of the formal aspects of this element may elucidate its origins. From an Indo-European point of view, the geminate /n:/ of /spun:(a)-/ can only be the result of an assimilation of an earlier cluster consisting of an /n/ and a consonant, */nC/. The nature of the /u/ can be twofold. As we have seen above, it can either represent a real /u/, or it can be the rendering of an anaptyctic vowel that was coloured because of an adjacent labial consonant. This means that /spun:-/ can either go back to */spunC-/ or to */spənC-/. If we would chose for an analysis */spunC-/ and would want to interpret it from an Indo-European point of view, we would not be able to interpret it as a root, since Proto-Indo-European did not allow roots of the shape **sCRR- . If we would chose the analysis */spənC-/, things are easier: we could analyse this element as the zero grade, *spnC-, of a root *spenC-. The only question remaining is, what would be the nature of the consonant following *n?

4, 7, 19), *šu-pu-nu-ma-an* (AKT 8, 294: 18; AKT 10, 20a: 17; AKT 10, 20b: 4; OIP 27, 49a: 2; OIP 27, 49b: 7 ([...] *ma-an*); RA 59, p. 40 nr. 16: 9; kt a/k 335: 13; kt a/k 931: 3 (-[n]u-); kt o/k 64: 21; kt r/k 19: 23). Another attestation of “*išpunuman*” is cited by OAPD for the unpublished text kt f/k 80a–b, and other attestations of “*Šubunuman*” are cited by OAPD for kt k/k 32 and kt 94/k 760. Çayır (2004: 48) cites an attestation “*iš-pi-nu-ma-an*” for kt e/k 155: 2, which he translates as “*išpunuman*”. The photo of this tablet (*ibid.*: 53) is not clear enough to decide whether Çayır’s reading is correct: perhaps we could read this name as e.g. “*pà-pì-nu-ma-an*” as well. Veenhof (2017 (= AKT 8): 355–6) cites an *iz-pu-nu-ma-an* for AKT 8, 246: 1. It is unclear to me what to think of the spelling with IZ: perhaps we should read *iš₆-pu-nu-ma-an*.

692 ^m*iš-pu-un-nu-u-m[a]* (StBoTB 4.22, 71), ^m*iš-pu-un-n[u-u-ma]* (StBoTB 4.26 rev. 12), *iš-pu-nu-ma* (StBoTB 4.40, 6), ^m*iš-pu-nu-u-ma* (StBoTB 4.40, 7). Note that all attestations are found in land grants written in Akkadian.

693 Nom.sg. ^{MUNUS}*iš-pu-un-na-la-aš* (KBo 2.12 v 11), gen.sg. ^{LÚ}*iš-pu-un-na-la[-aš]* (KBo 11.34 i 7), broken ^{LÚ.MEŠ}*iš-pu-un-n[a-...]* (*ibid.* 10), cf. Pecchioli Daddi 1982: 237, 390. The form ^{MUNUS}*išpunnalaš* was initially interpreted as a woman’s name (*išpunnala*, Laroche 1951: 23), but with the finding of attestations of the noun ^{LÚ}*išpunnala-* it became clear that ^{MUNUS}/_f*išpunnalaš* was a noun as well (Laroche 1955: 94).

694 Goetze’s proposal (1954a: 356, with footnote 55) that *šupunaḥšu* should be analysed as *šupu-n-aḥšu* and that “*Šupu-* may or may not have anything to do with *šuppi-*”, only has antiquarian value.

In LIV², the following roots of the structure **spenC-* are listed: **spend-* ‘to libate’, **(s)pend-* ‘to stretch’, and **(s)penh₁-* ‘to pull, to stretch’ (although the latter two can now be equated using Kortlandt’s effect, which states that under some conditions a PIE **d > *h₁*, cf. Garnier 2014). The former of these, **spend-* ‘to libate’, is attested in Hittite as *išpānt-ⁱ* / *išpant-* ‘to libate’, and it seems attractive to me to connect Kanišite *išpun-* / *šapun-* / *šupun-* / *spun:-* / *< *spnC-* with it. In Hittite ritual practices, libating (*išpānt-*) is one of the key activities, so it may not be unexpected that we should encounter this concept in the onomastic material. Moreover, a connection with ‘to libate’ would help understand the interpretation of the noun ^{LÚ/MUNUS}*ispunnala-*. In KBo 11.34 i 7–9 we read:

- 7 URU*tamielḥa=ma* ^{LÚ}*išpunnala*[š]
 8 *parna pānzi ta=z=kan* SAG.DU^{MEŠ}[(-)x?]
 9 *šuhḫi uarpanzi ...*

‘In Tamielḥa they go to the house of the ^{LÚ}*išpunnala-*,
 and they wash their heads on the roof.’

Apparently, the house of the ^{LÚ}*išpunnala-* is a place where the subjects of this text, probably the king and the queen, can wash their heads. It therefore stands to reason that this house is ritually pure, and it is therefore attractive to assume that this is due to the fact that the house belongs to the ^{LÚ}*išpunnala-*. A derivation of ^{LÚ}*išpunnala-* from the verbal root **spend-* would therefore certainly make sense (cf. section 9.5 for the linguistic history of ^{LÚ/MUNUS}*ispunnala-*).

If Kanišite *išpun-* / *šapun-* / *šupun-* really means ‘to libate’, we would have to translate *išpunaḥšu* / *šapunaḥšu* / *šupunaḥšu* as ‘libated son’, and *išpunuman* / *šupunuman* as ‘coming from libation’. It must be admitted, that there are not many verbal stems that occur as the initial element of names in *-ḥšu* and *-uman*, but we do find some examples. For instance, in § 5.3.57, the names *ilaliaḥšu* and *ilaliuman* were interpreted as containing the Hittite verbal stem *ilālije/a-^{zi}* ‘to desire’, and subsequently translated as ‘desired son’ and ‘coming from desire’. These therefore support the interpretation of *išpun-* / *šapun-* / *šupun-* as ‘to libate’.

An extra argument in favour of an interpretation of this element as ‘to libate’ is that it could explain the variant *šipunaḥšuš* (m.),⁶⁹⁵ which is attested once. This name clearly can be equated with *išpunaḥšu* / *šapunaḥšu* / *šupunaḥšu*, but it is aberrant in two respects. First, it ends in an *-š*, whereas the other names end in *-ḥšu*. However, since the *-š* is very likely a Hittitoid case ending

695 *ší-pu-na-aḫ-šu-uš* (AKT 3, 41: 17).

(nominative? cf. § 4.2.3), it is not very relevant. The second aberrancy is more interesting: *šipunaḥšuš* starts with *šip-*, the *i* of which is difficult to explain as an epenthetic vowel in the cluster /sp-/: we would expect an *u* here, as is found in *šupunaḥšu* (cf. § 3.2.6). Of course, since *šipunaḥšuš* is attested only once, one could argue that it is a mistake, or an irregular form.⁶⁹⁶ Another possibility is that the *i* is a real vowel, and that we have to analyse this name as /sipun:áḥšu/. This latter option is interesting, since Hitt. *išpānt-ⁱ* / *išpant-* ‘to libate’ has a variant with an extra *i*, namely *šippānt-ⁱ* / *šippant-*. Although the interpretation of the alternation in Hittite between *išp^o* and *šipp^o* in this verb is debated, I adhere to the view that *šippānt-* represents /sip:ānt-/, with a real *i*, which reflects an original reduplication syllable: *šippānt-* < **spe-spōnd-*.⁶⁹⁷ For Kanišite *šipunaḥšuš* vs. *išpunaḥšu* / *šapunaḥšu* / *šupunaḥšu* this means that we can assume that the former name represents /sip:un:áḥsu/, with /sip:un:-/ corresponding to Hitt. *šippant-* /sip:ənt-/ < **spe-spnd-*, whereas the latter names represent /spun:áḥsu/, with /spun:-/ corresponding to Hitt. *išpant-* /ispənt-/ < **spnd-*.

If the interpretation of Kanišite *išpun-* / *šapun-* / *šupun-* as being cognate to Hittite *išpānt-ⁱ* / *išpant-* ‘to libate’ is correct, we need to explain why in this element an assimilation of an *-nT*-cluster to /n:/ has taken place, whereas in e.g. *ḫumad-* ~ Hitt. *ḫūmant-* ‘all, every’ and *išpud-* / *šupud-* ~ Hitt. *išpant-* ‘night’ this is not the case. To my mind, this can be explained by the fact that ‘to libate’ contains a PIE cluster **-nd-* (**spnd-*), whereas ‘all, every’ and ‘night’ contain a PIE cluster **-nt-* (**h₂eiu-uent-*, **k^wspnt-*). It has recently become clear that in the prehistory of Hittite the PIE cluster **-nd-* developed differently from the PIE cluster **-nt-*. Whereas PIE **-nt-* (= *[-nt:-]) yielded PANat. */-nt-/, which developed into Hitt. /-nt-/ = [-nd-], PIE **-nd-* (= *[-n^ʔt-]) yielded PANat. */-n^ʔt-/, which developed into Hitt. /-nt:-/ = [-nt-].⁶⁹⁸ It therefore seems quite possible to me that in the Kanišite variant of Hittite the two original different clusters behaved differently as well, with PIE **-nt-* yielding Kanišite [-nd-], and PIE **-nd-* developing into Kanišite [-n:-]. This assumption does require, however, that Kanišite Hittite is in some regards phonologically different from Ḫattuša Hittite. In the course of this book it will turn out that we have to assume this for a few other cases as well. See Chapter 9 for a full treatment of the differences between Kanišite Hittite and Ḫattuša Hittite.

696 We seem to be forced to assume a similar thing about the attestation *šīḫurpia* for /sh^wrpiə/, which is more often spelled *šuhurpia*, cf. § 3.2.7.

697 Although details about the exact development of **spe-spōnd-* > *šippānt-* are unclear. For the question whether the *i* in Hitt. *šippānt-* / *šippant-* is real or not, cf. Melchert 2016b, with references to other views.

698 Cf. Kloekhorst 2013: 131–9; Kloekhorst fthc.a.

Another phonological issue that needs to be discussed is the status of the *u* in *išpun-* / *šapun-* / *šupun-* = [spun:-]. If this element really reflects **spnd-*, the *u* should be the outcome of an epenthetic vowel [ə] that developed in a large cluster containing a labial consonant. Thus far, however, all such cases of epenthetic *u* alternated in spelling with *a* or with *zero*, and therefore had to be regarded as merely allophonic: e.g. *warašma* / *waršama* / *waršuma*, in which *waršuma* = [warsəma] = /warsma/; or *tamria* / *tamuria*, in which *tamuria* = [tməria] = /tmria/; *arkalia* / *arkulia*, in which *arkulia* = [arkʷəlia] = /arkʷlia/; etc. In the case of *išpun-* / *šapun-* / *šupun-* no variants with *a* or *zero* are attested. This is already remarkable on its own. However, taking into account that we would in principle for *išpunaḥšu* / *šapunaḥšu* / *šupunaḥšu* and *išpunuman* / *šupunuman* expect the underlying forms /spn:áhsu/ and /spn:omán/, one could wonder why we do not find spellings like ***šupnaḥšu* = [səpn:áhsu] and ***šupnuman* = [səpn:omán]. I am therefore inclined to believe that in this name the epenthesis in the cluster **TnT* had already been phonologized: **spnd-* > **spund-* / > /spun:-/. This could be supported by the element *išpud-* / *šupud-* < **k^wspnt-*, which is always spelled with *u* as well, and never ***išpad-* or ***šupad-*. We may therefore synchronically interpret it as /spund-/, with a phonemic /u/ < **ə*/. See sections 9.3 and 9.4 for a more detailed treatment of this idea.

5.3.63 *k(a)-*

This element is only found in the name *kaḥšušar* (f.),⁶⁹⁹ which is attested twice on a single tablet. Since the element *-ḥšušar* is clearly Hittitoid, we may expect that *k(a)-* is, too. Formally, the only Hittite comparandum would be the demonstrative pronoun *kā-* / *ki-* / *ke-* ‘this (one)’, but this does not make much sense semantically. Cf. also Zehnder (2010: 178), who states that the name *kaḥšušar* is “[o]ffenbar ein Name auf *-aḥšušar*, aber zu welcher Grundlage?”.

5.3.64 *kapi(a)-*

This element is only found in the name *kapium[an]* (g.u.),⁷⁰⁰ which is attested only once. Formally, it may be compared with Hitt. *kappi-* / *kappai-* ‘small, little’, which would yield for *kapium[an]* an analysis /kap:iomán/ ‘coming from the small one’. Semantically, this is not self-evident, however.

699 *kà-aḥ-šu-šar* (Prag I 837: 22, 25 ([*-šar*])).

700 *kà-pi-ú-m[a-an]* (kt a/k 335: 12).

5.3.65 *ka/ipu(i)(a)-*

An element *kapui(a)-* is found in the name *kapuiuman* (g.u.), which is attested once as *kà-pu-i-ú-ma-an*.⁷⁰¹ It resembles the name spelled *kà-pu-ú-ma-an* (g.u.),⁷⁰² which shows plene spelling with the sign Ú. Since in Old Assyrian orthography plene spelling can denote a disyllabic sequence in which a weak consonant (*ʔ*, *w* or *y*) is present between the two vowels,⁷⁰³ we may interpret this spelling as representing *-uyu-*, which we then may equate with the spelling *°u-i-ú-* in *kà-pu-i-ú-ma-an*, and assume that both represent an underlying /kapuiomán/.

However, a third name that may be relevant is spelled *kà-pu-PE/I-ma-an* (g.u.).⁷⁰⁴ Although the sign PE/I often denotes *wa*, it can be read *we*, *wi* and *wu* as well. In this case, it is attractive to read *wu*, since we then would have a name ending in *-uman*: *kà-pu-wu-ma-an*.⁷⁰⁵ Moreover, this reading could be equated with *kà-pu-ú-ma-an*, but would then rather point to an underlying /kapuomán/, without a *y*. In order to integrate *kapuiuman* into this story, we may assume a diachronic distribution: in original /kapuiomán/ the intervocalic /i/ was lost, yielding younger /kapuomán/. Such an assumption would fit the fact that also in the prehistory of Hittite proper, intervocalic /i/ was lost.⁷⁰⁶

A fourth possibly relevant spelling is *ki-pu-ú-ma-an* (m.).⁷⁰⁷ the plene spelling with Ú is remarkable. If this name can be equated with *kà-pu-i-ú-ma-an*, *kà-pu-ú-ma-an* and *kà-pu-wu-ma-an*, we may assume that their underlying form started with a cluster /kp-/ (although we would in principle assume that an anaptyctic vowel in such a cluster would be spelled with *u*, and not with *i*, because of the *p*, cf. § 3.2.6). If so, we may assume an underlying /kpu(i)omán/.⁷⁰⁸

Since *-uman* is a clear Hittitoid element, we may expect that *ka/ipu(i)(a)-* is Hittitoid, too. However, I know of no good Hittite comparandum. The verbal stem *kappuie/a-*⁷⁰⁹ ‘to count, to calculate’ (probably deriving from earlier **kappuie/a-*) could formally match a stem /kpu(i)a-/, but is semantically unattractive.

701 *kà-pu-i-ú-ma-an* (CCT 6, 16b: 33).

702 *kà-pu-ú-ma-an* (CCT 5, 34b: 23; kt a/k 931: 2; kt k/k 100: 18; kt m/k 35: 37).

703 Cf. Kouwenberg 2017: 26, 40.

704 Brussel 2: 14.

705 This name is cited by OAPD as “Kapuman”, apparently reading the sign PE/I as *wu* as well.

706 E.g. Melchert 1994a: 130; Kloekhorst 2008: 90.

707 ICK 1, 129: 7.

708 A fifth similar name, *kà-pi-ú-m[a-an]* (kt a/k 335: 12), cannot easily be reconciled with the other spellings. Cf. the preceding paragraph for its treatment.

5.3.66 *kapzia-*

This element occurs in the name *kapziašue* (f.),⁷⁰⁹ and may be equated with the women's name *kapzia* (f.).⁷¹⁰ I know of no good Hittite comparandum for it (thus also Zehnder 2010: 182), but Del Monte & Tischler (1978: 533) do refer to a water source called ^{TÚL}*kap-zi-ia*[-...] as attested on the Hittite fragment KBo 60.153, 11, which is formally comparable to Kanišite *kapzia*.

5.3.67 *karaš-*

This element is only found in the name *karašuman* (g.u.),⁷¹¹ which is attested only once. I know of no good Hittite comparandum.

5.3.68 [†]*karnik(a)-*

Larsen (2014 (= AKT 6c): 259) cites for AKT 6c, 696: 14 a name “*Kà-[†]ar[†]-ni-kà-šu*”, which would then contain an element *karnik(a)-* that is unattested elsewhere. However, to my mind, this name should rather be read *ša-ar-ni-kà-šu* (with an initial *ša-*, cf. the photograph of this tablet as published in Larsen 2014: 363: ) , which is attested more often, cf. § 5.3.122.

5.3.69 *kid(a)-*

This element is only found in the name *kidaḥšu* (m.),⁷¹² which is attested on one tablet only. Formally, we may think of a connection with Hitt. ^{LÚ}*kīta-*, a cult functionary, but semantically this does not make much sense.

5.3.70 *kikar(š)(a/i)n-*

We find a seeming element *kikarašn(a)-* in the man's name *kikarašnaḥšu* (m.).⁷¹³ If we compare this to the independent name *kikaršan* (m.),⁷¹⁴ it is clear that the *a* between the *r* and the *š* in *kikarašnaḥšu* is probably a dead vowel.

709 *kà-áp-zi-áš-we* (ICK 2, 246: 6; kt h/t 330 [1b]: 3), *kà-áp-zi-a-áš-we* (ICK 4, I 513: 3, 12).

710 *kà-áp-zi-a* (AKT 5, 40: 3, 7, 9, 10, 18, 27; AKT 5, 70: 3, 12; AKT 10, 48: 3; CCT 1, 10b–11a: 4, 8; kt a/k 805a: 5, 12, 18; kt a/k 805b: 2). In ICK 4, I 527: 5, we read *a-šūr-DU₁₀ DUMU kà-áp-zi*[-...], where e.g. OAPD reads *kapzia*. However, since patronymics are usually formed from men's names, this would mean that in this case *kapzia* refers to a male person, whereas in all other attestations it is a women's name. I am therefore hesitant in reading the attestation of ICK 4, I 527 as *kà-áp-zi*[-*a*].

711 *kà-ra-šu-ma-an* (AKT 10, 18a: 14).

712 *ki-da-aḥ-šu* (AKT 6c, 700: 2).

713 *ki-kà-ar-áš-na-aḥ-šu* (AKT 10, 21a: 18; AKT 10, 21b: 3 (<-šu>); kt š/k 3 [1b] (Günbatt 2014, nr. 14): 5).

714 *ki-kà-ar-ša-an* (AKT 6b, 302b: 10 (-*a*[*n*]); AKT 10, 12a: 20; AKT 10, 12b: 1; AKT 10, 13b: 5 (-[*a*]*n*); AKT 10, 16: 4, 21 (*ki-kà-ar-ša*[-...]); AKT 10, 35a: 21; AKT 10, 35b: 3; AKT 10, 60b: 4; VAT 4537 [1b]: 14; kt f/k 61 [1b]: 14; kt y/t 4: 8; kt 87/k 39 [1b?]: 1, 8 (<-*an*>); kt 87/k 285: 17; kt

Conversely, the absence of a vowel between the *š* and the *n* in *kikarašnaḥšu* indicates that the *a* between *š* and *n* in *kikaršan* is a dead vowel as well, and that both names contain a cluster /-rsn-/. This is supported by the spelling *kikaršin*,⁷¹⁵ which then must be interpreted as representing a pronunciation [kikarsən],⁷¹⁶ whereas the spelling *kikaršan* represents the pronunciation [kikarsn]. With the interpretation of this element as /kikarsn-/, we may assume that in *kikarašnaḥšu* the *a* before *-ḥšu* is a 'linking *a*': /kikarsn-á-hsu/.

Note that we also find the name *kikarnaḥšu* (g.u.), attested three times on a single pair of tablet and envelope,⁷¹⁷ the status of which is unclear to me. Is it a spelling mistake for *kikarašnaḥšu*? Or is it a phonologically real variant, showing a development from original *kikaršnaḥšu* to *kikarnaḥšu* with loss of the /s/?

Another interesting variant is the name *kikarša*, which is identical to *kikaršan* without the final *-n*. Note that the two attestations of this name on kt 87/k 39 [1b?] (*ki-kà-ar-ša* in lines 8 and 24) are found on the same tablet where *kikaršan* is found (*ki-kà-ar-ša-an* in line 1), and it is clear that at least the person with the name *kikarša* of line 8 is identical to *kikaršan* of line 1. So here we may assume a scribal error, *ki-kà-ar-ša* <-an>. May we assume this for the attestation of line 24 as well? (It is not fully clear whether this name refers to the same individual as the *kikarša(n)* of lines 1 and 8). And can we then assume that the other attestations of *kikarša*⁷¹⁸ are also to be equated with *kikaršan*? This question is important, since in the Hittite text HKM 58, 1 a man named ^m*ki-kar-ša* is attested, which we could then equate with Kanišite *kikarša(n)*. Note that the Hittite spelling shows the presence of a single *-k-*, so we can assume this for the Kanišite form as well: /kikarsn(-)/.

Apart from the link with the Hittite man's name ^m*kikarša* it is not easy to find a good Hittite interpretation for the element /kikarsn(-)/. Its /ki-/ looks like a reduplication syllable, which would leave /-karsn-/ as its core. This resembles the Hittite verbal stem *karš-* 'to cut', but this connection cannot explain the /n/ in /-karsn-/. Moreover, semantically a connection with 'to cut' is not very attractive.

5.3.71 *kimarn(a)-* /*kimirn(a)-*

See *gimarn(a)-* / *kimarn(a)-* / *kimirn(a)-*.

88/k 1050: 19), *ki-kàr-ša-an* (AKT 10, 60a: 18; kt n/k 32 [1b]: 2, 33; kt 87/k 285: 7, 8, 19, 23; kt 87/k 312: 4).

⁷¹⁵ *ki-kàr-ši-in*₄ (kt g/t 42 + z/t 11 [1b]: 33).

⁷¹⁶ Cf. § 3.2.3.

⁷¹⁷ *ki-kà-ar-na-ah-šu* (Kayseri 276a: 3; Kayseri 276b: 7, 12 (cf. Kienast 1984: 119–21)).

⁷¹⁸ *ki-kà-ar-ša* (AKT 1, 57: 4; AKT 1, 57B: 3, 7; kt c/k 183: 12; kt 87/k 38: 26).

5.3.72 [†]*kini(a)*-

This element is reportedly found in one name, which is attested only once: *ki[†]-ni-a-aḫ-šu* (TC 1, 100: 24).⁷¹⁹ As is clear from the transliteration, the interpretation of the first sign of this name is not fully clear. And indeed, if we look at the hand copy of this text, , we see that the first sign may vaguely resemble the sign KI, but is certainly not identical to the sign KI as is written, for instance, in obv. 5 of the same tablet: . Combined with the fact that an element *kini(a)*- is unattested elsewhere, I am therefore in doubt about this reading. I rather propose that we should read the first sign of this name, , not as KI, but as UT () which to my mind does more justice to the shape of the sign.⁷²⁰ Moreover, this reading yields the form *ut[†]-ni-a-aḫ-šu*, a name that is attested in the spelling *ut-ni-aḫ-šu* several times (cf. below at the treatment of *utni(a)*- / *watni(a)*-).

I conclude that the element *kini(a)*- should be stricken from our inventory.

5.3.73 *kipu(a)*-

See *ka/ipu(i)(a)*-.

5.3.74 *kul(a)*-

This element is only found in the name *kuluman* (g.u.),⁷²¹ which is attested only once. I know of no good Hittite comparandum.

5.3.75 *kula/un(a)*-

An element *kulan(a)*- is attested in the names *kulanaḫšu* (g.u.),⁷²² *kulanaḫšušar* (f.),⁷²³ and *kulanala* (m.).⁷²⁴ We also find the independent name *kulana*, which may be identical to it.⁷²⁵ Besides *kulan(a)*-, we also find an element *kulun(a)*- in the name *kulunaḫšu* (g.u.)⁷²⁶ and as an independent name, *kuluna* (g.u.).⁷²⁷ If *kulan(a)*- and *kulun(a)*- are to be equated, we may assume

719 Cited as “*Ki-ni-a-aḫ-šu*” by Contenau 1920: 14, as “*Ki[†]-ni-a-aḫ-šu*” by Hecker aATU and CDLI, and as “*Kiniahšu*” by OAPD.

720 This reading implies that the seeming presence of vertical strokes must be either a damage or unintended. An inspection of the RTI (Reflecting Transformation Imaging) photo of this tablet (available through CDLI) confirms this.

721 *ku-lu-ma-an* (AKT 8, 314: 3).

722 *ku-la-na-aḫ-šu* (kt 91/k 123: 1). Another attestation of “*Kulanaḫšu*” is cited by OAPD for the unpublished text kt k/k 32.

723 *ku-lá-na-aḫ-šu-šar* (kt 89k/k 282: 3 (cf. Yakubovich 2010: 214)).

724 *ku-lá-na-lá* (kt g/t 36 [1b]: 16; kt n/k 1716a: 4; kt n/k 1716b: 23).

725 *ku-lá-na* (kt t/k 9: 18).

726 *ku-lu-na-aḫ-šu* (TC 2, 66: 1; TC 3, 240: 13).

727 *ku-lu-na* (kt g/t 36 [1b]: 15).

they reflect an underlying phonological form /k^wln(a)-/. From Hittite, we know a name ^m*ku_ualanalla*,⁷²⁸ which resembles Kanišite *kulanala*, but need not be fully identical to it. I will therefore leave it out of consideration.

According to Zehnder (2010: 194), in the element *kulan(a)-* (he does not treat *kulun(a)-*) “liegt wohl luw. *ku(wa)lan(a)-* ‘Heer’ vor”, referring to Yakubovich 2008: 272.⁷²⁹ However, as Zehnder rightly remarks, the elements combining with *-ḥšu(šar)* are always Hittitoid, not Luwic, and I, too, am therefore sceptical about this connection. According to Dercksen (2014: 198) the element *kuluna(-)* may rather be equated with the toponym *kuluna* (cf. Nashef 1991: 73).

5.3.76 *kunin(a)-*

This element is only found in the name *kuninaḥšušar* (f.),⁷³⁰ which is attested several times. According to Zehnder (2010: 198), it cannot be plausibly interpreted. Goetze (1954b: 77a) has connected it with the element *-kuni* that is used as the final element of a number of men’s names, but, as Zehnder rightly remarks, the latter element does not seem to be Hittitoid.⁷³¹ Also a connection to the Kanišite women’s name *kunania* (thus Laroche 1966: 299) is rejected by Zehnder because it is formally “nicht gut begründet”. Zehnder himself only remarks that in Nuzi a man’s name ^m*kunina* can be found that has been classified as Anatolian by Purves (Gelb, Purves & MacRae 1943: 229b).

I would rather consider a connection with the element *-kunian*, which occurs as the final element of two possibly Hittitoid women’s names (cf. § 5.2.8). Above, it has been argued that if *-kunian* is indeed Hittitoid, it may be related to the Ḫattuša Hittite word for ‘woman’, which must have had the shape */k^wán:- / k^wnV-/. If this connection is true for *kunina-* as well, we may assume that it started in /k^wn-/, and had a meaning related to ‘woman’. It must be stressed that this is all very speculative, however.

5.3.77 *kunud(a)- / kunut(a)-*

This element is only found in the name that is spelled once as *ku-nu-da-aḥ-šu* (g.u.)⁷³² and once as *ku-nu-ta-aḥ-šu* (g.u.).⁷³³ We therefore cannot decide

728 ^m*ku-_ula-la-na-al-la* (StBoTB 4.91 obv. 6).

729 That is, Yakubovich’s dissertation. Cf. also the later commercial edition of this dissertation, Yakubovich 2010: 214.

730 *ku-ni-na-aḥ-šu-ša-ar* (TC 2, 67: 4, 13, 19, 23), *ku-ni-na-aḥ-šu-šar* (TPAK 1, 153: 15). Note that *kuninaḥšušar* of TC 2, 67 is the wife of Aššur-piḥ, an Assyrian. Nevertheless, the fact that the name ends in *-ḥšušar* clearly indicates that we are dealing here with a Kanišite name.

731 Cf. Zehnder 2010: 5 for a treatment of the names ending in *-kuni*.

732 *ku-nu-da-aḥ-šu* (kt 87/k 96: 18).

733 *ku-nu-ta-aḥ-šu* (EL 209: 25).

whether the spelling with DA or with TA is the regular one (cf. § 3.2.10 for the fact that these two signs in principle are phonetically distinct).

Since *-ḥšu* is a clear Hittitoid element, we may expect this for *kunud(a)-* / *kunut(a)-*, too. Goetze (1954a: 356) analysed *kunutaḥšu* as *kunu-ta-ḥšu*, the initial element of which he compares with Hittite *kunna*- ‘right’. This does not make much sense, however: the assumption of an element *-ta-* is unconvincing,⁷³⁴ and a connection with *kunna-* does not explain the second *u* of *kunu-*. However, I know of no good alternative interpretation.

5.3.78 *kupid(a)-*

This element is only found in the name *kupidaḥšu* (m.),⁷³⁵ which is attested several times. Note that the consistent spelling with the sign DA points to the presence of a voiced stop /d/.⁷³⁶ According to Dercksen (2014: 198), the element *kupid(a)-* can be equated with the toponym *ku/ipita* (cf. Nashef 1991: 71).

5.3.79 *kuš(a)-*

This element is only found in the name *kušuman* (g.u.),⁷³⁷ which is attested on a single pair of tablet and envelope. I know of no good Hittite comparandum.

5.3.80 *lah(a)-*

This element is only found in the name *laḥašue* (g.u.),⁷³⁸ which is attested only once. Formally, we may think of a connection with the Hittite noun *lāḥḥ-* ‘military campaign, expedition’, but this is semantically unattractive (‘beloved by / in campaign?’; or ‘good in / at campaign?’). Another theoretical possibility

⁷³⁴ The analysis of *-ta-* is based on a comparison of the names “*Ispu-a : Iṣpu-n-uman : Iṣpu-ta-ḥšu*” and “*Per(u)wa : *Peru-n- : Peru-ta-ḥšu*”. However, the name *Ispua* (VS 26, 96: 2) has a *-s-*, not a *-š-*, and therefore has nothing to do with *iṣpunuman* and *iṣpudaḥšu* (note the spelling with DA!). Moreover, *iṣpunuman* and *iṣpudaḥšu* contain two different elements. Furthermore, the stem **peru-n-* that is cited, is based on the assumption that the Kanišite name *pirua* may have something to do with Hittite *peru* / *perun-* ‘stone’, which cannot be independently proven (cf. § 5.3.105). Also a connection between *pirua* and *pirutaḥšu* is far from evident (cf. § 5.3.106). All in all, there is no indication whatsoever for the presence of an element *-ta-* that was used between the initial and final element of a compound name.

⁷³⁵ *ku-pi-da-aḥ-šu* (kt o/k 52: 1, 7, 12, 18 (*ku-pi-da*[-...])); kt o/k 64: 2), *ku-pi-da-aḥ-šu* (CCT 6, 7b: 1; kt f/k 81: 2). Note that the attestation as found in CCT 6, 7b is read by its editors (Garelli & Collon 1975: 15) as “*ku-bi-na(?) -aḥ-šu*”, but e.g. CDLI rightly transliterates this name as “*ku-pi-da-aḥ-šu*” (cf. the hand copy, , where the third sign clearly is DA () and not NA ()).

⁷³⁶ Cf. § 3.2.10.

⁷³⁷ *ku-ṣu-ma-an* (CCT 5, 48b: 18), *ku-ṣu-ma-an* (CCT 5, 48c: 9).

⁷³⁸ *la-ḥa-áš-we* (kt j/k 274: 4 (cf. Balkan 1965: 157)).

would be to assume that the element in fact contains a /h^w/ (cf. § 3.2.7 for the fact that the labiality of this consonant is not always spelled), and compare it to the Hittite verb *lāhu-* / *lahu-* / *lāh^w-* / *lāh^w-* / ‘to pour’. Semantically this would only make sense if Hitt. *lāhu-* had some ritualistic connotation, which in view of a possible connection with Hitt. *lahhura-* ‘offering table’ may have been the case.⁷³⁹

5.3.81 *lah(u)r(a)-* / *luhr(a)-*

It has been argued in § 3.2.7 that the three names *lahraḥšu* (g.u.),⁷⁴⁰ *luhraḥšu* (m.),⁷⁴¹ and *lahuraḥšu* (g.u.)⁷⁴² can be interpreted as representing a single underlying name. This name must have had the shape /lh^wrāhsu/, with *lahraḥšu* spelling the pronunciation [lh^wrāhsu], *lahuraḥšu* representing [lh^wərāhsu], and *luhraḥšu* standing for [lāh^wrāhsu].

According to Zehnder (2010: 73), the element *lah(u)r(a)-* / *luhr(a)-* may be equated with the Hittite noun *lahhura-* ‘offering table, altar’. I find this an attractive suggestion both formally and semantically. Since Hitt. *lahhura-* contains a geminate *-hh-*, we would have to assume that Kanišite *lah(u)r(a)-* / *luhr(a)-* contains a long labio-laryngeal as well, /lh^w:r(a)-/. All in all, we can interpret *lahraḥšu* / *luhraḥšu* / *lahuraḥšu* as /lh^w:rāhsu/ ‘altar-born’.

5.3.82 *laknan-*

This element only occurs in the name *laknanḥašušar* (f.),⁷⁴³ which is attested on a single pair of tablet and envelope. Since *-ḥšušar* is a clear Hittitoid element, we may assume that *laknan-* is, too. However, I know of no good Hittite comparandum for it.

5.3.83 *lapada-*

This element only occurs in the name *lapadanika* (f.), which is attested only once, namely as *la²-pá-da-ni-kà* (KTP 43: 4).⁷⁴⁴ Goetze (1954a: 352) hesitatingly

739 Cf. Kloekhorst 2008: 513–4, as well as the following lemma.

740 *la-aḥ-ra-aḥ-šu* (TC 1, 87: 15). Note that Zehnder (2010: 73) states that *lahraḥšu* “eher Schreibung [ist] für besser bezeugtes ^(m)*Luhraḥšu*”.

741 *lu-ùḥ-ra-aḥ-šu* (AKT 1, 39: 14; AKT 10, 40a: 5; AKT 10, 40b: 5, 14; KTH 28: 4; KTH 28B: 6, 10, 14, 22; KTS 1, 58a: 5; TC 1, 87: 32; kt a/k 1263/b: 20).

742 *lá-ḥu-ra-aḥ-šu* (AKT 1, 79: 6). Note that in CDLI (“*lá-ḥu-ta-aḥ-šu*”) and OAPD (“*Lahutahšu*”) this name is read with a TA instead of a RA, but the hand copy of the tablet clearly shows a damaged RA: . Cf. also Bilgiç’s transliteration “*IGI Ḥu-[r]a-aḥ-šu*” (Bilgiç 1990 (= AKT 1): 99).

743 *lá-ak-na-an-ḥa-šu-ša-ar* (AKT 10, 42a: 4; AKT 10, 42b: 9 (<-an->)).

744 Eisser & Lewy 1930: 183 read this name as “*Ta-ma-da-ni-kà*”, but Goetze 1954a: 353 reads it as “*La²-ba-da-ni-kà*”, which I have adopted here (cf. also Zehnder 2010: 203).

suggests that *lapada-* may be equated with *lawat(a)-* (see the following paragraph). Since an alternation between *p* and *w* is not found elsewhere in the corpus of Hittitoid Kanišite personal names, this suggestion is better forgotten.

If the sign DA is interpreted as representing an underlying cluster /-nda-/ (cf. § 5.3.45 for a similar interpretation of *ḫumadašu*), *lapada-* could formally in principle be connected with Hittite **lappant-*, the participle of the verb *lāpp-^{zi} / lapp-* ‘to glow, to flash’.⁷⁴⁵ This would mean that *lapadanika* would represent /lp:and-a-néka/ ‘glowing sister’. It must be admitted that semantically, this interpretation is on the weak side.

5.3.84 *lawat(a)- / luat(a)-*

This element is only attested in the men’s name *luatuman* (m.),⁷⁴⁶ which has a variant spelling *lawatuman*.⁷⁴⁷ We may therefore assume that the underlying form of this name is /lwatomán/, which could be pronounced [lwatomán], spelled *lá-wa-tù-ma-an*, as well as [ləwatomán], spelled *lu-wa-tù-ma-an*.

Within the Hittite lexicon, one could think of a connection with the noun *lāyatt-*, of unknown meaning.⁷⁴⁸ A better interpretation is provided by Nashef (1991: 77), however, who assumes a connection to the toponym ^{URU}*laṽanta* (cf. Del Monte & Tischler 1978: 245). Alternatively, Dercksen (2014: 198) suggests a connection to the mountain name *laṽata* (Del Monte & Tischler 1978: 245). This means that *luatuman / lawatuman* can be interpreted either as /lwatomán/ ‘coming from (the town of) Laṽanta’, or as /lwatomán/ ‘coming from (the mountain) Laṽata’.

5.3.85 ^(†)*li-*

When taken at face value, the women’s name *liḫšušar* (f.),⁷⁴⁹ which is attested several times, seems to contain an initial element *li-*. However, such an element is not found in any other name, and *liḫšušar* would be one of the very few cases in which the element *-ḫšušar* is not preceded by an *-a-* (the only other case being *laknanḫašušar*). Laroche (1966: 298) therefore argues that *liḫšušar* should be interpreted as a haplological form that derives from an earlier form **liḫšaḫšušar*. In this way it would contain the initial element *liḫš(a)-* that is found in the name *liḫšuman* as well, and which, according to Laroche, can be connected with the name of the mountain ^{HUR.SAG}*liḫša*. Since no Hittite

745 Although the participle itself is unattested in Hittite.

746 *lu-wa-tù-ma-an* (ICK 2, 36: 4; kt k/k 35a: 1, 4, 16; kt k/k 35b: 6).

747 *lá-wa-tù-ma-an* (ICK 1, 117: 3). Note that ICK 1, 117 is the tablet that corresponds to the envelope ICK 2, 36.

748 Cf. Kloekhorst 2008: 522.

749 *li-iḫ-šu-šar* (TC 2, 53: 13; kt n/k 1854: 3, 12).

comparandum for an element *li-* can be found, this scenario is worthwhile considering.⁷⁵⁰ See below for a treatment of the element *liḫš(a)-*.

5.3.86 *liḫš(a)-*

This element is synchronically only found in the name *liḫšuman* (g.u.),⁷⁵¹ but possibly originally occurred in *liḫšušar* (f.) as well, if this name haploglogically derives from an earlier **liḫšaḫšušar* (cf. the preceding paragraph on ^(†)*li-*). It was already Laroche (1966: 298) who connected the element *liḫš(a)-* to the mountain name ^{HUR.SAG}*liḫša* as attested in Hittite texts.⁷⁵² Zehnder (2010: 204) points out that there is also a city named ^{URU}*liḫša*, but that since the mountain ^{HUR.SAG}*liḫša* lay in the vicinity of Kaniš, the names *liḫšuman* and **liḫšaḫšušar* probably refer to the mountain.

5.3.87 *luat(a)-*

See *lawat(a)-* / *luat(a)-*.

5.3.88 *luḫat(a)-*

This element is only found in the name *luḫatuman* (g.u.),⁷⁵³ which is attested only once.⁷⁵⁴ Goetze (1931: 260, 262) proposes to connect it to the toponym *eluḫat*, as attested in Assyrian texts, which in texts from Kültepe is spelled *eluḫut* (cf. Nashef 1991: 38–9). However, as Goetze notes himself, the absence of the initial *e-* in *luḫatuman* does not make this connection evident. Bilgiç (1945–1951: 2) proposes to analyse *luḫatuman* as *luḫa-t-uman*, in which *luḫa-* would correspond to the toponym *luḫā* as attested in texts from Kaniš (cf. Nashef 1991: 38–9), whereas *-t-* would be an infix of some sort. The postulation of such an infix does not make this analysis credible. Laroche (1966: 107) hesitatingly proposes that the name *luḫatuman* is identical to the name *lawat-uman* / *luatuman* (see § 5.3.84 above), but this seems unlikely to me: I do not know of any other examples where an *ḫ* can alternate with *zero*.

Alternatively, one may assume that *luḫat(a)-* starts in a cluster /lh^w-/, which would make way to connecting *luḫat(a)-* with the Hittite participle

750 It is taken over by Zehnder 2010: 204, as well. Bilgiç 1945–1951: 3 rather analysed *liḫšušar* as *liḫšu-šar*, in which *-šar* is identical to the *-šar* of *-ḫšu-šar*, and *liḫšu-* would be the same as the toponym *liḫšu* which he cites for TC 3, 113: 19 (Bilgiç o.c.: 34). However, the sequence that Bilgiç reads as *ma-at Li-iḫ-šī-im* ‘the land of Liḫšu’ is nowadays read is *ma-at-li-iḫ-šī-im*, gen. of a noun *matliḫšu* ‘pack saddle(?)’ (cf. Veenhof 1972: 5f.; CAD M: 412).

751 *li-iḫ-šu-ma-an* (BIN 4, 183: 13).

752 Cf. Del Monte & Tischler 1978: 246.

753 *lu-ḫa-ti-ma-an* (BIN 4, 189: 2).

754 An element *luḫat(a)-* is seemingly present in the name *lu-ḫa-ta-ḫu-ni* (kt c/k 482: 7) as well, but since an element *-(a)ḫuni* is not found in any other name, I do not think that it can be connected to the group of Hittitoid names.

laḫuuant- ‘pouring’. Semantically, this connection may make sense if the Hittite verb *lāḫu*ⁱ / *laḫu-* ‘to pour’ had an original ritualistic meaning (‘libate’) as well (cf. the treatment of the element *laḫ(a)-*, in § 5.3.80). We may then assume that *luḫat(a)-* represents an underlying form /lh^wand-/ < **lh₃uent-*.⁷⁵⁵ This option remains very speculative, however. See at the treatment of the element *luḫut(a)-* (§ 5.3.90) for a possible connection.

5.3.89 *luḫr(a)-*

See *laḫ(u)ra-*.

5.3.90 *luḫut(a)-*

This element is only found in the name *luḫutuman* (g.u.),⁷⁵⁶ which occurs only once. This name resembles *luḫatuman* (see at the treatment of *laḫut(a)-*, above), and we may therefore assume that they are identical. This would mean that we should assume an underlying form /lh^wndomán/ (with a zero-grade formation **lh₃unt-*).

5.3.91 *maḫir(a)-*

This element is only found in the name *maḫiraḫšu* (g.u.),⁷⁵⁷ which is attested only once. I know of no good Hittite comparandum for it.

5.3.92 *mak(a)-*

This element occurs in the woman’s name *maḫanika* (f.),⁷⁵⁸ but may also occur on its own in the name *maka* (f.).⁷⁵⁹ See Zehnder (2010: 204–5) for a treatment of these names, where it is argued that *mak(a)-* may be equated with the stem *makk-* as found in the Hittite verbs *makkēšš^z-* ‘to become numerous’ and *maknu^z-* ‘to make abundant’, both deriving from the adjective *mēkk-* ‘many, much’ (with *makk-* reflecting the zero-grade stem **mġh₂-*, whereas *mēkk-* goes back to the full grade stem **mēġh₂-*).⁷⁶⁰ According to Zehnder, this implies that *maḫanika* may have meant “die viele Schwestern hat”. However, since Ḫattuša Hittite *mēkk-* / *makk-* ‘much, many’ is etymologically related to words meaning ‘large, big’ in the other Indo-European languages (Skt. *mahi*, Gr. μέγας ‘large, big’), Zehnder tentatively proposes that in *maḫanika* the original meaning was

755 Cf. § 3.2.11 for the fact that preconsonantal nasals are usually not expressed in spelling, and § 5.3.45 for the fact that Hittite *-nt-* corresponds to Kanišite [-nd-]. For the etymology of Hitt. *lāḫu*ⁱ / *laḫu-* as reflecting a root **leh₃u-*, cf. Melchert 2011.

756 *lu-ḫu-tù-ma-an* (AKT 8, 293a: 3).

757 *ma-ḫi-ra-aḫ-šu* (TC 1, 87: 48).

758 *ma-kà-ni-kà* (BIN 6, 20: 2).

759 *ma-kà* (TPAK 1, 32: 3, 12, 19).

760 Cf. also Kloekhorst 2008: 543–4, 545.

still present, and that it means “die grosse Schwester”. Since the names in *-nika* always refer to women, I am inclined to assume that they form endocentric compounds, and therefore think that an original meaning ‘big sister’ is more likely. On a formal level, the connection with Hittite *makk-* < **mǵh₂-* means that *makanika* must represent an underlying /mk:anēka/.

According to Zehnder, the independent name *maka* may have been the hypocoristicon of *makanika* (or any other name starting in *maka-*).

5.3.93 *mari-*

This element is found in the names *mariaḫšu* (g.u.),⁷⁶¹ *marila* (m.)⁷⁶² and *mariuman* (g.u.).⁷⁶³ Especially on the basis of *marila* it is clear that the element had the shape *mari-*, and not *maria-* (which would have been possible for *mariuman*). There are several Hittite lexemes that formally would match *mari-*: (GİS)*māri(t)-* ‘spear’, *marri* ‘within a glimpse’, and *marrije/a-tta(ri)* ‘to melt (down), to dissolve’. None of these is semantically attractive, however. When it comes to toponyms, the name of Mari is attested in Old Assyrian texts (cf. Nashef 1991: 83), but since this city was situated far from Anatolia (at the east border of present-day Syria), I do not find it likely that we should equate the Kanišite element *mari-* with it.

5.3.94 *minuz(i)-(?)*

This element is only found in the name *minu²zilka* (g.u.), which is attested only once, as *mì-nu²-zi-il₅-kà* (BIN 4, 71: 19). The status of the second sign of this name is not fully clear, cf. the hand copy: . For instance, Goetze (1954a: 352) and Laroche (1966: 119) read it as NU, but e.g. CDLI transliterates the name as “*me- x -zi-il₅-kà*”. And indeed, although NU () may not be an impossible reading, e.g. NI () and E/IR () would in principle fit as well (*mì-ni²-zi-il₅-kà* or *mì-ir²-zi-il₅-kà?*).

Since there are several names ending in *-ilka* in which the *i* must be an epenthetic vowel (*ašilka*, *ḫaršumilka*, *šimnilka*), it cannot be excluded that in this name the *i* is epenthetic, too. So we may analyse it as ending in /-tsilk:á/ as well as /-tslk:á/. I have therefore put the *i* in brackets in *minu²z(i)-*.

Starting from the reading *minuzilka*, Goetze (1954a: 352–3) and Laroche (1966: 308) connect *minuz(i)-* to the toponym ^{URU}*manuzziia*, which is spelled once as ^{URU}*minuzziia* as well (cf. Del Monte & Tischler 1978: 259). Differently Tischler (1982: 446), who compares *minu²z(i)-* to the Hittite lexeme

⁷⁶¹ *ma-ri-aḫ-šu* (AKT 6b, 490: 20).

⁷⁶² *ma-ri-lá* (kt f/k 158: 13).

⁷⁶³ *ma-ri-ú-ma-an* (kt k/k 11 [1b]: 6).

GIŠ⁷⁶⁴*minuzzi-* of unknown meaning (cf. Tischler HEG II: 214).⁷⁶⁴ Both connections are semantically not self-evident.

5.3.95 *mišn(a)-*

This element is only found in the name *mišnaḥšu* (g.u.),⁷⁶⁵ which is attested only once. I know of no good Hittite comparandum for it.

5.3.96 *mu(a)-*

This element only occurs in the name *muanika* (g.u.),⁷⁶⁶ which is attested on a single tablet only. It is reminiscent of the element *mua-* as found in the woman's name *muanani*. This latter name has often been analysed as consisting of the Luwian lexemes *muṽa-* 'an awe-inspiring quality' and *nāna/i-* 'brother',⁷⁶⁷ most recently by Yakubovich (2010: 209–13). However, as was argued above (section 4.4), it is unlikely that *muanani* is of a Luwic, or even Anatolian (i.e. Indo-European) origin, and the element *mua-* of *muanani* must therefore be separated from the element *mu(a)-* as found in *muanika*.

Also in the case of *muanika* it is not likely that *mu(a)-* should be compared to the Luwian lexeme *muṽa-*. In the other names ending in *-nika*, the first element is specifically Hittitoid (*ḥašušar-nika*, *mak-a-nika*, *šupi-a-nika*), not Luwic. However, I know of no good Hittite comparandum.

A very wild guess would be to assume that *mu(a)-* stands for /mw(a)-/, and to connect this with the Hittite numeral *meṽu-* / *meṽau-* 'four'. We then would have to assume that /mw(a)-/, through syncope (cf. section 9.2 for syncope in *-ḥšu(šar)*), derives from */miw(a)-/ 'fourth', which would make the name /mwanéka/ < */miwanéka/ structurally comparable to *šaptamanika* /sptmanéka/ 'seventh sister' (cf. its treatment in § 5.3.119 below). It must be admitted that this analysis requires several instances of special pleading.

5.3.97 *mulili(a)-* / *pulilu(a)-*

On the tablet AKT 10, 1a: 4, we find the name *pu-li-lu-áš-we* (f.), whereas on the corresponding envelope (AKT 10, 1b: 8, 11) the same name is spelled *mu-li-li-áš-we*. Since the element *-ášue* is a specifically Hittitoid element, we may assume that *mulili(a)-* / *pulilu(a)-* is Hittitoid, too. However, the alternation between *m-* and *p-* is not found in any other Kanišite name.⁷⁶⁸ Also the alternation between *i* and *u* is strange. Since *muliliašue* occurs twice on the envelope,

⁷⁶⁴ See also Zehnder 2010: 222.

⁷⁶⁵ *mī-iš-na-aḥ-šu* (kt a/k 477: 4).

⁷⁶⁶ *mu-a-ni-kà* (AKT 6c, 604: 3).

⁷⁶⁷ See references in Zehnder 2010: 224.

⁷⁶⁸ Goetze's proposal (1960: 52¹⁸) that the alternation between *m-* and *p-* would point to an underlying sound /v-/ or /f-/ is therefore unattractive.

whereas *puliluašue* is found only once, I am inclined to assume that the former form is the ‘correct’ one and that the latter form represents a misspelling or mishearing.

In Hittite texts, a word *mūlili* is attested in a list of garden plants (CHD L–N: 328), which may mean that *muliliašue* should be interpreted as ‘beloved by/ because of the *mūlili*-plant’.

5.3.98 *naki(a)*-

This element is found in the names *nakiahšu* (m.),⁷⁶⁹ *nakialka* (g.u.),⁷⁷⁰ and *nakiuman* (m.).⁷⁷¹ It was already Bilgiç (1945–1951: 17, with footnote 127) who convincingly compared *naki(a)*- to the Hittite adjective *nakki*- ‘important, valuable; difficult; powerful’.⁷⁷² This implies that the *a* found in *naki-a-ḫšu* and *naki-a-lka* is a linking *-a*-. We may now assume the following meanings for these names: *naki-a-ḫšu* /nak:iaḫsu/ ‘important child’; *naki-a-lka* /nak:ialk:á/ ‘important-bright’; *naki-uman* /nak:iomán/ ‘coming from an important one’.

5.3.99 *nim(a)*-

This element is found in the names *nimahšu* (g.u.)⁷⁷³ and *nimahšušar* (f.),⁷⁷⁴ both attested only once. I know of no good Hittite comparandum for it. It may therefore be worthwhile to follow Bilgiç (1945–51: 9⁶⁶), Laroche (1966: 299³) and Zehnder (2010: 233) in assuming that *nimahšu* and *nimahšušar* are orthographic variants of the more often attested names *niwahšu* and *niwahšušar* (see § 5.3.102 below). According to Kouwenberg (2017: 79), in Old Assyrian orthography such an occasional spelling of *w* by an *m* occurs more often. He does state, however, that “[i]t is difficult to determine the background of *m* instead of *w*”, and the exact status of *nimahšu(šar)* therefore remains unclear.

5.3.100 *niš(a)*-

This element only occurs in the name *nišašue* (f.),⁷⁷⁵ which is attested several times. Dercksen (2014: 197) suggests that it may be equated with ^{URU}*nēša*,⁷⁷⁶ the Hittite name for Kaniš (note that an Old Assyrian *i* can stand for /e/ as well). If correct, we may analyse the name *nišašue* as /nesas:ue/ ‘beloved to/by Nēša’.

769 *na-ki-aḫ-šu* (CCT 1, 37b: 17), *na-ki-a-ḫa-šu* (kt 91/k 183t: 8).

770 *na-ki-a-al-kà* (kt 91/k 128: 4, 7).

771 *na-ki-ú-ma-an* (kt n/k 74: 1).

772 Thus also Landsberger 1954: 123; Goetze 1954a: 356; Laroche 1966: 298; Zehnder 2010: 73.

773 *ni-ma-aḫ-šu* (CCT 1, 41b: 6).

774 *ni-ma-aḫ-šu-ša-ar* (ICK 4, I 584: 5).

775 *ni-ša-áš-ú-e* (kt a/k 917a: 5 (-ú<-e>), kt a/k 917b: 19 (<-ú>-e), cf. Balkan 1965: 157), *ni-iš-a-šu-e* (kt 87/k 266: 7).

776 Cf. Del Monte & Tischler 1978: 290–1.

See § 6.2.7 for the possibly Hittitoid name *nišašar* (f.), which may contain the element *niša-* as well.

5.3.101 *nīṭ(a)-*

This element is only found in the name *nītaḥšušar* (f.),⁷⁷⁷ which is attested in one text only. I know of no good Hittite comparandum for it.

5.3.102 *nīwa-*

This element is found in the names *nīwaḥšu* (m.),⁷⁷⁸ *nīwaḥšušar* (f.),⁷⁷⁹ *nīwala* (g.u.),⁷⁸⁰ *nīwalka* (f.),⁷⁸¹ and *nīwašu* (m.).⁷⁸² It is therefore well embedded within the group of Hittitoid names. It was Bossert (1946: 158, 170) who first compared this element to the Hittite adjective *nēya-* ‘new’.⁷⁸³ Both formally

777 *ni-ta-aḥ-šu-šar* (AKT 6c, 647: 3 (*nī^l-*), 18).

778 *ni-wa-aḥ-šu* (AKT 10, 2a: 4; AKT 10, 2b: 3, 11; AKT 10, 56a: 2; AKT 10, 56b: 6; Kayseri 4369: rev. 9; KTK 92: 16 (*ni-wa-a[ḥ-...]*); POAT 40a: edge 2; POAT 40b: obv. 2).

779 *ni-wa-aḥ-šu-šar* (AKT 1, 4: 2; AKT 4, 42: 2 (*ni-wa-aḥ[...]*), 3, 4; AKT 4, 43: 2, 3; AKT 10, 37a: 5, 8; AKT 10, 37b: 5, 8; AKT 10, 55a: 15; AKT 10, 55b: 5 (*[ni-wa-]*); TC 3, 252: 4, 6, 15; VAT 4536 [1b]: 2; kt c/k 1638a: 1 (broken), 2, 5; kt c/k 1638b: 1, 7; kt n/k 75: 4, 10; kt 01/k 247a [1b] (Günbatti 2014, nr. 6): 7, 18 (*[nī-...]*), 22 (*[ni-...]*), 27, *ni-wa-aḥ-šu-ša-ar* (TC 1, 33: 2, 15; TCL 1, 240: 21; kt a/k 554a: 6; kt a/k 554b: 3; kt c/k 701: 2). Other attestations of “Nīwahšušar” are cited by OAPD for the unpublished texts kt n/k 201, kt 91/k 228, and kt 94/k 401. In TCL 1, 240, we find in line 1 the name *na-aḥ-šu-ša-ra* which must refer to the same woman whose name in line 21 is spelled *ni-wa-aḥ-šu-ša-ar*. I agree with Zehnder (2010: 237) that *na-aḥ-šu-ša-ra* “eher als einmaliger (Schreib- oder Hör-) Fehler denn als sprachwirkliche Kontraktion einzustufen [ist] und [...] daher auch kaum mit Götze [1954a: 354³¹] und Laroche [1966: 313] als früher Fall von Thematisierung gewertet werden [darf]”.

According to Günbatti (2014: 56, 126), the text kt 01/k 247b [1b] has “*Na-da-ah-ši-šar*” (line 3) and “*Nu-na-ah-šu-šar*” (line 13), where its corresponding envelope (kt 01/k 247a) reads *ni-wa-aḥ-šu-šar*. On the photograph of kt 01/k 247b (Günbatti 2014: 183), line 13 is unfortunately invisible, but since a combination *nu-na* (𐎢𐎠𐎡𐎢) in general is formally rather reminiscent of *ni-wa* (𐎢𐎠𐎡𐎢), especially if the upper wedge of NI would have been drawn on into the direction of WA, I am hesitant in trusting the transliteration “*Nu-na-ah-šu-šar*”. Line 3 is visible, and reads 𐎢𐎠𐎡𐎢𐎠𐎡𐎢𐎠𐎡𐎢. There is to my mind no reason to transliterate its latter part as *-aḥ-ši-šar*, as Günbatti does; we can rather read it as *-aḥ-šu-šar*. The initial part of the name is more difficult, however. Günbatti reads *na-da-*, which may not be impossible. I myself see room for reading *ni-wa-x-*, but must admit that I do not know what the x should be.

780 *ni-wa-lá* (kt n/k 37 [1b]: 5). Another attestation of “Nīwala” is cited by OAPD for the unpublished text kt 94/k 600.

781 *ni-wa-al-kà* (ICK 1, 123: 3).

782 *ni-wa-šu* (AKT 10, 28a: 4; AKT 10, 28b: 4, 10; Kayseri 276e: obv. 2; Kayseri 276t: rev. 8; TC 1, 68: 2; VAT 4537 [1b]: 3; kt n/k 31 [1b]: obv. 1; kt n/t 2100: 17). Another attestation of “Nīwašu” is cited by OAPD for the unpublished text kt 91/k 284.

783 Thus also Laroche 1951: 107; Landsberger 1954: 123; Goetze 1954a: 356; Laroche 1966: 299; cf. also Zehnder 2010: 89. Goetze glosses *nēya-* as ‘innocent’ as well, referring to Hitt. *niyalla-* ‘innocent’, but CHD (L–N: 455) translates *nēya-* as ‘new, fresh’ only.

(note that the sign NI can be read *né* as well, so that OAss. *ni-wa-* can represent /newa-/) and semantically this connection is very attractive. The names in which the element *niwa-* occurs can now be assumed to have had the following meanings: *niwahšu* /newáhsu/ ‘new-born’; *niwahšušar* /newáhsu:r/ ‘new-born girl’; *niwala* /newala/ ‘the new one’;⁷⁸⁴ *niwalka* /newalk:á/ ‘new-and-bright’; *niwašu* /newas:u/ ‘new-and-beloved’.

5.3.103 *palan(a)-*

This element is only found in the name *palanašue* (g.u.),⁷⁸⁵ which is attested only once. Note that the name shows plene spelling of the second *a*, *pá-la-a-na-áš-we*, which may be relevant for the phonological interpretation of this element. Unfortunately, I know of no good Hittite comparandum for it. Laroche (1966: 321) translates the name *palanašue* as “chère à Pallanna”, apparently assuming that the element *palan(a)-* can be equated with the men’s name ^m*pallanna* as attested in several Hittite texts and possibly in Hieroglyphic Luwian as well (cf. Laroche 1966: 133).⁷⁸⁶

5.3.104 *paruali(a)-*

This element is only found in the name *parualiuman* (m.),⁷⁸⁷ which is attested on a single tablet only. It is reminiscent of the Hittite noun ^{LÚ}*parūala-* ‘a functionary’,⁷⁸⁸ but the forms are not identical. I know of no other possible Hittite comparanda.

5.3.105 *pirua-*

This element occurs in the names *piruahšu* (m.),⁷⁸⁹ *piruala(?)* (m.),⁷⁹⁰ and *piruali* (g.u.),⁷⁹¹ and is identical to the independent name *pirua* (m.),⁷⁹² which

784 Unless this name can be directly equated to Hittite *niyalla-* ‘innocent’ (cf. CHD L–N: 459).

785 *pá-la-a-na-áš-we* (BIN 4, 190: 3).

786 See Zehnder (2010: 239) for references to other interpretations of the name *palanašue*, all of them not very attractive.

787 *pár-wa-li-ú-ma-an* (kt k/k 10 [Ib]: 15 (courtesy of K. Hecker)).

788 Cf. CHD P: 200–1 for attestation and semantic discussion.

789 *pí-ru-a-aḫ-šu* (AKT 5, 66: 4; AKT 5, 67: 3; AKT 10, 55a: 13; AKT 10, 55b: 2), *pí-ru-wa-aḫ-šu* (ICK 1, 123: 18; KTP 43 [Ib]: 6; kt e/k 167 [Ib]: 2 ([*-šu*]); kt 87/k 285: 4), *pí-ir-wa-aḫ-šu* (BIN 4, 190: 14; kt v/k 152: 9). Another attestation of “Peruwahšu” is cited by OAPD for the unpublished text kt 91/k 128.

790 *pí-ir-wa-al-a* (kt s/k 53: 3). Note the remarkable ‘broken’ spelling *-al-a-*: should we read this as *-alya* (cf. Kouwenberg 2017: 29–30, 40–1 for this possibility) and equate this name with *pirualia* (cf. footnote 793)? If so, the name “*piruala*” should be stricken from our inventory.

791 *pí-ru-a-li* (AKT 3, 7: 19).

792 *pí-ru-a* (AKT 6c, 604: 2; AKT 8, 246: 17; AKT 10, 10b: 3, 7; AKT 10, 18a: 6, 10; AKT 10, 18b: rev. 6; AKT 10, 23a: 4, 14; AKT 10, 23b: 3, 6; AKT 10, 25a: 3; AKT 10, 25b: 6; AKT 10, 27a: 6, 24; AKT 10,

Other attestations of “Perua” are cited by OAPD for the unpublished texts Brussel 2; C10 Landsberger; Konya 3; kt f/k 120; kt f/k 164; kt f/k 49; kt f/k 51; kt f/k 60; kt k/k 1 [1b]; kt k/k 9 [1b]; kt n/k 201; kt s/k 10; kt 86/k 153a-b; kt 87/k 282; kt 87/k 283; kt 89/k 341; kt 91/k 183; kt 91/k 282; kt 93/k 733; kt 94/k 154; kt 94/k 519; kt 94/k 832; kt 94/k 1388; kt 94/k 1516; kt 99/k 139.

In ICK 1, 27, we find a name spelled *pi-ri-wa* (a: 18; b: 19), which OAPD cites as “Perua”. I find an identification of *pi-ri-wa* with *pirua* difficult, however. Since the spelling *pi-ri-wa* occurs twice it cannot be a mere spelling mistake. Moreover, we would not expect the presence of an anaptyctic *i* in a cluster /-rw-/ since *w* is a labial consonant. I therefore think it is best to keep *pi-ri-wa* apart from *pirua*.

is one of the best attested Kanišite personal names.⁷⁹³ It is generally agreed upon that the name *pirua* must be equated with the theonym ^d*pirua*-. This horse deity⁷⁹⁴ is attested in Hittite texts from Ḫattuša,⁷⁹⁵ but in these texts mentioned as belonging to the pantheon of Kaniš.⁷⁹⁶ The name of ^d*pirua* has often been etymologically connected with the Hittite noun *peru* / *perun*- ‘rock’ (cf. Tischler HEG II: 619–21, with references), but this connection seems to have been based more on a phonetic similarity between the two lexemes than on semantics.⁷⁹⁷ As Haas (1994: 412) remarks, “[e]in Zusammenhang zwischen der Etymologie des Namens und der Funktion der Gottheit läßt sich allerdings nicht mehr erkennen”. To my mind, this indicates that the etymology of ^d*pirua* as deriving from the same root as Hitt. *peru* / *perun*- is incorrect. We therefore cannot state more than that the Kanišite element *pirua*- as found in the names *pirua*, *piruahšu*, *piruala*, and *piruali* can be linked to the Kanišite horse deity ^d*pirua* as attested in Hittite texts, but that the further origin of this latter name is unclear.

5.3.106 *pirut(a)*-(?)

In TC 3, 255a: 13, we come across a name that is read “*pì-iš-ta-aḫ-šu*” by Hecker aATU (thus also CDLI and OAPD), but as “*Pé-ru²-ta-aḫ-šu*” by Goetze 1954a: 354 (thus also Laroche 1966: 146). And indeed, in the hand copy of this text, , we see that the second sign, which according to Hecker should be read IŠ, is rather different in shape from the IŠ that is present on the same tablet in lines 5 () and 10 (). Goetze’s reading of this sign as RU makes more sense: cf. the shape of the sign RU as found on the same tablet in line 14 ()

Goetze’s linguistic interpretation of this name is less attractive, however. He assumes that it consists of three elements, *peru-ta-ḫšu*, the first one of which is linked to the element *pirua* (cf. above), and the second of which is

793 It is unclear to me whether the name *pirualia* (m.) (*pí-ru-a-li-a* (AKT 10, 15a: 1, 7; AKT 10, 15b: 4 ([...] *-ru-a-li-a*), 5, 9) belongs to this group, too: an element *-alia* is not found in any other Hittitoid name.

794 Cf. Haas 1994: 412–4.

795 Cf. Van Gessel 1998: 356–9.

796 Haas 1994: 612–5.

797 This connection goes back to Sommer (1932: 318¹, 421), who observed that in KBo 6.28 + KUB 26.48, ^d*pirua* often occurs next to ^{NA}*ḫekur* without the determinative ^d. This prompted him to assume that *pirua* originally was a noun denoting ‘rock, stone’, and he connected it to the Hittite word *peru*- / *perun*- ‘stone, rock’ (Friedrich 1952: 168). However, the absence of the determinative ^d in some contexts does not to my mind grant such a conclusion.

a “mediating” element (Goetze 1954a: 356). The existence of a mediating element *-ta-* is better forgotten, however (cf. footnote 734), so that this analysis cannot be maintained.⁷⁹⁸ Zehnder (2010: 72) rather assumes that *pirut(a)-* can be equated with the toponym ^{URU}*biruta* ‘Beirut’.⁷⁹⁹ This seems to me quite unlikely: Beirut was situated far from Kaniš, so I do not find it attractive to find this name being used as an onomastic element there.

5.3.107 *piš(a)-*

This element is only found in the name *pišaḥšu* (m.),⁸⁰⁰ which is attested only once. Formally, one could compare it to Hittite *peš(š)-*^{zi} ‘to rub, to scrub’ (CHD P: 315), but this does not make much sense semantically.

5.3.108 *pišan(a)-*

This element is only found in the name *pišanaḥšu* (g.u.), which is attested only once.⁸⁰¹ Formally, it may be compared with Ḫattuša Hittite *pešan-* / *pešn-* / *pišen-* ‘man, male person’ (note that the first sign of *pišanaḥšu*, BE, can be read *pì* as well as *pè*). Semantically, it would mean that *pišanaḥšu* / *pesanáhsu* / denotes ‘male child’ (or ‘masculine-born’?), which is not an unattractive meaning for a man’s name.

5.3.109 *†pišt(a)-*

An element *pišt(a)-* is allegedly present in the name that is read as *pì-iš-ta-aḥ-šu* by Hecker (aATU) for TC 3, 255a: 13 (thus also CDLI and OAPD). This reading is probably false, however: see its treatment under the element *pirut(a)-*, above (§ 5.3.106). We should therefore strike *pišt(a)-* from the inventory of Kanišite elements.

5.3.110 *pitiana-*

This element is found only in the name *pitianalka* (f.),⁸⁰² which is attested several times. As Zehnder (2010: 252) remarks, the element is “nicht leicht

798 Also Laroche’s equation of the element *pirut(a)-* to a “*Peru(n)ta*, divinité de Kaneš” (1966: 298) is based on Goetze’s analysis, and therefore cannot be upheld anymore.

799 Del Monte & Tischler 1978: 315.

800 *pì-ša-aḥ-šu* (OIP 27, 19a: 24).

801 *pì-ša-na-aḥ-šu* (kt 73/k 14 [1b]: 30). Note that Hecker (aATU) reads the name as *pì-iš-na-aḥ-šu*, but on the photograph of this tablet (cf. plate 61/3 in Özgüç 1986), the second sign of this name, , is clearly ŠA, not IŠ.

802 *pì-tí-a-na-al-kà* (BIN 6, 236: 4; TC 2, 66: 4 (*pì-tí-[...]*), 7; TC 3, 240: 3).

zu deuten". He is rightfully sceptic about earlier proposals by Laroche⁸⁰³ and Neumann.⁸⁰⁴

5.3.111 *pulilu(a)-*

See *mulili(a)-* / *pulilu(a)-*.

5.3.112 *šad(a)-*

This element is found in the names *šadahšu* (m.)⁸⁰⁵ and *šadahšušar* (f.).⁸⁰⁶ In the vast majority of its attestations, this element is spelled with the sign DA (19 times), whereas the spellings with the sign TA are marginal (3 times). This implies that the dental stop was in fact voiced, [d].

According to Goetze (1954a: 356), *šad(a)-* is 'theophorous'. Although he considers the possibility that *šad(a)-* may be equated with the deity ^d*šanda-*, Goetze rather opts for a connection with the deity ^d*šiuatt-* because "[i]n view of the doublet *Niwaḥšušar* and *Naḥšušar* the assumption is possible and seems quite likely that *Šat(a)-* is for *Šiwat(a)-*" (*ibid.*: 356⁴⁶). To my mind, the existence of a single attestation *naḥšušar* next to normal *niwaḥšušar* does not warrant the assumption of a general rule that a sequence ^o*Ca*^o could in Old Assyrian be spelled ^o*Ca*^o.⁸⁰⁷ A connection between *šad(a)-* (attested as such more than 20 times!) and ^d*šiuatt-* therefore does not make sense. Moreover, the quality of the dental stop in *šad(a)-*, which must have been a voiced [d], does not match the voiceless [t:] of ^d*šiuatt-*.

A connection with the theonym ^d*šanda-* is formally better, and seems to be assumed by Laroche (1966: 156) since he cites these Kanišite names as

803 Laroche (1966: 308) connects *pitiana-* to the Hittite woman's name ^f*pittijanni* (KBo 5.7 obv. 22), which, as Zehnder argues (2010: 247) is better read ^f*pattijanni*. This makes a connection with *pitiana-* difficult.

804 Neumann (1974: 280) proposes a connection with Hittite *pittijalli-* "flink, schnell" (CHD P: 361 translates "swift"), assuming an *n/l*-interchange. Note that in Kloekhorst 2008: 655–6 it is argued that this word should be read *pattijalli-*.

805 *ša-da-aḥ-šu* (AKT 6b, 49i: 14 ([š]a²-...-š[u]); ATHE 67: 18 ([š-u]); ICK 1, 129: 1, 15; TC 1, 99: 4; TC 2, 30: 3, 14; TC 3, 21i: 8; TC 3, 253: 3; TPAK 1, 173: 2; VS 26, 125: 17, 19 (*ša-d[a-...]*); kt 87/k 253: 6; kt 87/k 253: 6; kt c/k 75i: 4, 10; kt m/k 103: 1; kt n/k 1414: 18 (the editor of this text cites this form as "*Ša-ta-aḥ-šu*" (Sever 1992: 484), but the hand copy (*ibid.*: 486) clearly shows that the second sign is DA); kt v/k 152: 5), *ša-ta-aḥ-šu* (TC 3, 218a: 5 (*-aḥ¹-*); TC 3, 218b: 9 (*-aḥ¹-*)). Other attestations of "*šadahšu*" are cited by OAPD for the unpublished texts kt f/k 59a–b [1b], kt f/k 83, kt n/k 705, kt s/k 53, kt 86/k 189, kt 86/k 191, kt 87/k 296, and kt 94/k 1175.

806 *ša-da-aḥ-šu-ša-ar* (ICK 1, 24b: 3) *ša-ta-aḥ-šu-ša-ar* (ICK 1, 24a: 3, 5).

807 Moreover, the form *naḥšušara* probably is not *sprachwirklich*, cf. footnote 779.

“*Sa(n)tahsu*” and “*Sa(n)tahsusar*”, respectively. This is followed by Zehnder (2010: 268), who points out that in Hittite texts this theonym occurs as a personal name, ^mšanta-, as well. Since in Hittite texts these names are spelled both with the sign TA (^m/dša-an-ta(-)) and with the sign DA (^m/dša-an-da(-)),⁸⁰⁸ they must represent a phonetic shape [sanda-], with a [d].⁸⁰⁹ This coincides with the Kanišite spelling with the sign DA, which points to the presence of a [d] as well. Moreover, we have seen in § 3.2.11 that clusters of the shape -nC- are usually defectively spelled without the -n-.⁸¹⁰

Formally, there is therefore no problem to interpret šadaḥšu and šadaḥšušar as containing an element /sanda-/ that is equal to the theonym ^dšanda-. Nevertheless, this connection has a slightly problematic side to it. The deity ^dšanda- does not seem to have been a part of the Hittite pantheon until relatively late (for the first time being attested in a treaty by Šuppiluliuma I) and is usually regarded as Luwian since he occurs in a Cuneiform Luwian passage, and in Hittite is attested in the Luwian influenced ritual of Zarpija.⁸¹¹ As Zehnder notes, it would be “auffällig” (2010: 268) if in šadaḥšu and šadaḥšušar the clearly Hittitoid elements -ḥšu and -ḥšušar would be combined with a Luwian lexeme: no other good examples of such a combination exist.⁸¹² On the other hand, since ^dšanda- also occurs in texts from Emar (Haas 1994: 408, 569–70), this theonym need not have been originally Luwian, but may have had a different provenance.

All in all, a connection between the element šad(a)- and the theonym ^dšanda- cannot be excluded, but has some problematic sides to it.

5.3.113 ša/iḥišn-

This element only occurs in the name šaḥišnuman / šiḥišnuman (m.),⁸¹³ which is attested several times. A third variant of this name may be found in the one attestation šaḥišnumin (m.).⁸¹⁴ This latter form is difficult in two ways, however. First it shows -umin vs. the -uman that is found in šaḥišnuman /

808 See the attestations gathered in Van Gessel 1998: 372 (^dšanta-) and in Laroche 1966: 156 (^mšanta-).

809 Cf. Kloekhorst 2013: 131–9 for the view that in Hittite an alteration between spelling with the sign TA and DA points to the presence of a voiced stop [d].

810 Cf. also ḥumadašu = /hōmandas:u/ as treated in § 5.3.45.

811 Cf. e.g. Haas 1994: 408, 653.

812 Cf. § 5.3.147 and 5.3.148 for a discussion of the names tarḫuan and tarḫutašu.

813 ša-ḥi-iš-nu-ma-an (AKT 10, 54a: 7; AKT 10, 54b: 3; VS 26, 100: 18; kt f/k 59b [1b]: 1, 12, 15, 20; kt f/k 96 [1b]: 2 ([ša-ḥ]i-), 8, 13, 18, 20 ([ša-]ḥi-); kt p/k 5 [1b]: obv. 7 ([š]a-); kt 73/k 14 [1b]: 21), ší-ḥi-iš-nu-ma-an (kt c/k 1641: 15).

814 ša-ḥi-šu-nu-mi-in (kt g/t 36 [1b]: 3).

šiḫišnuman. As was explained in § 5.2.13, this alternative shape may be well explained by assuming that *-umin* in fact represents */-omen/*, an ablaut variant of */-oman/* (compare Hittite nom.pl. *-umen-eš* besides nom.sg. *-uma(n)-š*). The second difficulty is that *šaḫišunumin* shows an *u* between the *š* and the *n* that is absent in *šaḫišnuman* / *šiḫišnuman*. Although in the Kanišite onomastic material epenthetic *u*'s do occur, they are only found next to labial consonants, which *š* and *n* both are not. In order to solve this problem, I wonder to what extent the reading of *ša-ḫi-šu-nu-mi-in* (thus Bilgiç 1964: 128) is correct. Since the sign ŠU (𐎶) is relatively similar to the sign IŠ (𐎢𐎣), we may assume that we are dealing either with a writing error by the scribe or with a reading error by the editor,⁸¹⁵ and that the name in fact was *ša-ḫi-iš-nu-mi-in*. If this is correct, we can assume that all three spellings, *šaḫišnuman*, *šiḫišnuman*, and *šaḫišnumin* represent a single underlying name */shisnoman/*, with an ablaut variant */shisnomen/*.

Since *-uman* is a clear Hittitoid element that is often attached to geographical lexemes, it is attractive, as Zehnder (2010: 29¹²) argued as well, to equate *ša/iḫišn-* with Hittite *šaḫešsar* / *šaḫešn-* 'fortification, stronghold'. This would mean that *ša/iḫišnuma/in* can be interpreted as */shes:nomán, shes:nomén/* 'fortification dweller' (Zehnder: "etwa 'Burgbewohner', 'Burger'").

5.3.114 *šaḫuišn(a)-* / *šuḫišn(a)-*^(?)

The element *šaḫuišn(a)-* is only found in the name *šaḫuišnuman* (m.),⁸¹⁶ which occurs on one tablet only (kt t/k 32), where it refers to a slave being sold: (7) ÌR *ša-ḫu-iš-nu-ma-an* (8) *šu-up-a-aḫ-šu a-na en-um-a-šur* (9) *a-na ši-mi-im i-dí-šu* 'Šupiaḫšu sold the slave Šaḫuišnuman to Ennum-Aššur'. In the edition of this text, line 7 is rather read "ÌR *ša Ḫu-iš-nu-ma-an*",⁸¹⁷ however, i.e. 'the slave of Ḫuišnuman' (Sever 1998: 491–2). However, according to J.G. Dercksen (p.c.), it would be odd if Šupiaḫšu would sell someone else's slave, namely one of Ḫuišnuman, and he therefore prefers to read 'ÌR *ša-ḫu-iš-nu-ma-an*', i.e. 'the slave Šaḫuišnuman', which suggestion I follow.

Since names in *-uman* are often derived from toponyms or nouns referring to localities, I propose to connect *šaḫuišn(a)-* with Hitt. *išḫuešsar* / *išḫuešn-* 'heap'. Since this noun must reflect **sh₂u-éh₁-sh₁-r/n-*,⁸¹⁸ the initial *i-* must be

815 Unfortunately, in the edition of the text in which this name is found, kt g/t 36, no hand copy or photograph of this tablet is provided, cf. Bilgiç 1964.

816 *ša-ḫu-iš-nu-ma-an* (kt t/k 32: 7, 15).

817 Likewise in line 15. Both readings are followed by Hecker aATU.

818 Cf. Kloekhorst 2008: 396–9 for the root etymology.

prothetic. We therefore can analyse Kanišite *šaḫuišnuman* as representing an underlying /sh^wes:nomán/ ‘coming from the heap’.

The question to what extent the man’s name *šu-ḫi-šu-nu-ma-an* (kt m/k 34: 2; cited thus by Hecker aATU) is identical to *šaḫuišnuman* is difficult to assess. Its initial part, *šu-ḫi-* could well be a spelling of underlying /sh^we-/ (cf. § 3.2.7), but the *-u-* between the *š* and the *n* is awkward. Since the sign ŠU (𐎶) is relatively similar to the sign IŠ (𐎢𐎣), I wonder to what extent it is possible that we are dealing either with a writing error by the scribe or with a reading error by Hecker,⁸¹⁹ and that the name in fact was *šu-ḫi-iš-nu-ma-an*. If so, it could be regarded as being identical to *šaḫuišnuman* and representing /sh^wes:nomán/ ‘coming from the heap’, as well.

5.3.115 *ša/ikri(a)-*

This element is found in the names *šakriaḫšu* (m.),⁸²⁰ *šakriašue* / *šikriašue* (f.),⁸²¹ *šakrilka* / *šikrilka* / *zikrilka* (f.),⁸²² and *šakriuman* / *šikriuman* (m.).⁸²³ The alternation between *šakri(a)-* and *šikri(a)-* points to an initial cluster /skr-/ (cf. § 3.2.3). I do not know how to interpret the one attestation with the sign *zi-*; perhaps we are dealing with an auditory mistake: [tskr-] instead of [skr-].

Formally, the element *ša/ikri(a)-* could fit the Hittite lexeme *šakri-* / *šekri-*,⁸²⁴ but unfortunately the meaning of this latter word is unclear. Josephson (1979: 93–4) argued that it should mean ‘well-being, good health’, which would

819 Although Hecker in aATU does mark this tablet as being collated by him.

820 *ša-ak-ri-aḫ-šu* (kt 91/k 1: 2, 3).

821 *ša-ak-ri-a-šu-e* (kt a/k 244: 4), *ša-ak-ri-áš-we* (AKT 10, 62a: 3, 13; AKT 10, 62b: 6, 9, 17; BIN 4, 208a: 5; BIN 4, 208b: 6, 10; kt a/k 94b), [*ša-a*] *k-ri-áš-we-e* (kt a/k 94a: 3), *ší-ik-ri-áš-we* (AKT 10, 5a: 4; AKT 10, 5b: 4, 9). Another attestation of “Šakriašwe” is cited by OAPD for the unpublished text kt n/k 1461. On one tablet, kt n/k 1414, we come across the spelling *ša-ak-ri-uš-we* (lines 1 and 7), cf. Sever 1992. It is unclear to me how to interpret the presence of the *u* instead of the *a*. OAPD cites this name as “Šakriašwe”, so plainly equating *šakriušue* with *šakriašue*.

822 *ša-ak-ri-il₅-kà* (CCT 3, 14: 3), *ší-ik-ri-il₅-kà* (BIN 6, 5: 4, 17), *zi-ik-ri-il₅-kà* (BIN 6, 93: 3). According to Michel (2001: 457, 460–1 with footnote 432), the three names all refer to a single individual. Note that Hecker aATU transliterates the attestation of BIN 6, 93: 3 as “Ší-ik-ri-il₅-kà”, but the hand copy of this tablet clearly shows *zi-*.

823 *ša-ak-ri-ú-ma-an* (AKT 6b, 509: 5; AKT 10, 53: 3; BIN 6, 226e: 19 (*ša-ak-ri*[...]); BIN 6, 266t: 3, 17; C41 Landsberger: 8 ([*-ma-*]), 13; CCT 3, 48: 17; ICK 1, 19a: 4; ICK 1, 19b: 25; KTS 1, 56b, 8; KUG 26: obv. 8, rev. 12; RA 49.50, 16: obv. 8, 14; TC 3, 97: 18; TC 3, 253: 9, 11, 20; kt c/k 1634: 1, 9; kt m/k 103: 3; kt 84/k 169: 3), *ší-ik-ri-ú-ma-an* (AKT 10, 18a: 5; AKT 10, 18b: obv. 3 (*ší-ik*[...]); AKT 10, 64a: 3; AKT 10, 64b: 3 (*-i*[*k-r*]*i-*), 7; kt c/k 1641: 22). Other attestations of “Šakriuman” are cited by OAPD for the unpublished texts Konya 2 and kt f/k 80a–b.

824 Thus also Zehnder 2010: 260–1.

certainly fit an onomastic element. According to CHD (Š: 49–50), the meaning of Hitt. *šakri-* / *šekri-* is unknown, however.

Goetze (1931: 260, 262) proposed to connect the name *šakriuman* to the toponym ^{URU}*šakkura*. Formally, this does not work, however: /skri(a)-/ is too far removed from ^{URU}*šakkura*.

Derksen (2014: 198) states that *šakriuman* may be derived from a toponym “Šakri”, but as far as I am aware, such a name has not been found yet.

5.3.116 *šalin(a)-*

This element only occurs in the name *šalinuman* (g.u.),⁸²⁵ which is attested only once. Since *-uman* often occurs with geographical elements, we may consider a connection with the Hittite noun *šaliman-* ‘a cult place’ (CHD Š: 105–6; cf. Tischler HEG II: 779, who translates “eine heilige Örtlichkeit”). Formally, this would require a development of earlier **šalimnuman* to *šalinuman*, showing an assimilation of *-mn-* > *-n-* that is paralleled by *ḫaršumnuman* > *ḫaršunuman*. Nevertheless, this connection remains speculative.⁸²⁶

5.3.117 *šam(a)-*

An element *šam(a)-* is found in the name *šamaḫšušar* (g.u.),⁸²⁷ which is attested only once. This name is reminiscent of the name *šamnaḫšušar*, and it therefore seems attractive to assume that *šamaḫšušar* is a variant of *šamnaḫšušar* that underwent an assimilation of its cluster *-mn-* to *-m-* (as is also known from e.g. *ḫaršumnalka* > *ḫaršumalka*, cf. § 3.2.8). See the following paragraph for a treatment of the element *šamn-* (which has a byform *šimn-*).

5.3.118 *ša/imn-*

This element occurs in the names *šamnaḫšu* (m.),⁸²⁸ *šamnaḫšušar* (g.u.),⁸²⁹ *šamnanika* (g.u.),⁸³⁰ *šamnuman* / *šanuman* / *šimnuman* / *šinuman* (m.),⁸³¹

825 *ša-li-nu-ma-a[n]* (TC 1, 87: 9).

826 Bilgiç’s analysis of this name as “*Šalli-n-uman*” (1945–1951: 2) seems to imply a connection with Hittite *šalli-* ‘big, large’. However, this connection forces Bilgiç to postulate that the *-n-* is an infix of some sort, which does not make his analysis very credible.

827 *ša-ma-aḫ-šu-šar* (kt n/t 2100: 19).

828 *ša-am-na-aḫ-šu* (AKT 10, 40b: 6). Another attestation of “*Šamnaḫšu*” is cited by OAPD for the unpublished text kt k/k 32.

829 *ša-am-na-aḫ-šu-šar* (kt k/k 42: 14) (cited by Balkan 1979: 55).

830 *ša-am-na-ni-kà* (BIN 4, 183: 3, 10).

831 *ša-am-nu-ma-an* (AKT 10, 42a: 12; TC 1, 62 [1b]: 24 [–an]); kt c/k 1635: 1; kt n/k 32 [1b]: 29, 50; kt o1/k 247a [1b] (Günbattı 2014, nr. 6): 32), *ša-nu-ma-an* (AKT 10, 42b: 2), *šī-im-nu-ma-an* (AAA 1/3, 8: 4, 11; AKT 10, 57b: 1 (*šī-i[m-nu-m]a-an*: note that the edition has ...*š[a-an]*); CCT 1, 29: 5; TC 1, 62 [1b]: 1 (–*n[u-ma-an]*), 15, 20 (–*m[a-an]*); TC 3, 254: 7, 15; kt

šimnala (f.),⁸³² and *šimnilka* / *šinilka* (f.).⁸³³ On the basis of the pair *šamnuman* and *šimnuman*, we may assume that the elements *šamn-* and *šimn-* are two different spellings of a single underlying phonological shape, which must have been /smn-/. This could apparently be pronounced [smn-], spelled *šamn-*, as well as [səmn-], spelled *šimn-* (cf. § 3.2.3 for details). Moreover, we see that the cluster *-mn-* could undergo assimilation: to *-n-* (probably [-n:-]) in *ša/imnuman* > *ša/inuman* and *šimnilka* > *šinilka*; and to *-m-* (probably [-m:-]) in *šamnaḫšušar* > *šamaḫšušar* (cf. the preceding paragraph for the latter example). See § 3.2.8 for a treatment of this phenomenon. Furthermore, the name *šimnilka* / *šinilka* indicates that the element did not end in an *-a-*, but was merely *ša/imn-* / *smn-*, which indicates that the *a*'s as found in e.g. *šamnaḫšu*, *šamnanika*, etc. are linking *-a*'s.

The phonological interpretations of the names containing this element are therefore as follows: *šamnaḫšu* = /smn-á-hsu/; *šamnaḫšušar* = /smn-á-hsus:r/; *šamnanika* = /smn-a-néka/; *šamnuman* / *šimnuman* = /smn-omán/ (with *šimnuman* representing phonetic [səmnomán]); *šanuman* / *šinuman* = /sn:-omán/ < */smn-omán/ (with *šinuman* representing phonetic [sən:omán]); *šimnala* = /smn-ala/ (with *šimnala* representing phonetic [səmnala]); *šimnilka* = /smn-lk:á/ (with *šimnilka* representing phonetic [səmnəlk:á]); and *šinilka* = /sn:-lk:á/ < */smn-lk:á/ (with *šinilka* representing phonetic [sən:əlk:á]).

According to Laroche (1966: 257), *ša/imn(a)-* may be equated with Hittite “*sam(a)na-* ‘fondation’”. Semantically, this equation may go well for the name *ša/imnuman* ‘coming from the foundation’, but for a name like *šamnanika* it does not make much sense (cf. Neumann 1974: 279: “Schwester des Grundsteins (?)”; Zehnder 2010: 92). Also formally, there are problems: the Hittite word

a/k 477e: 4 (*ší-im-nu*[-...]); kt a/k 898a: 21; kt j/k 9: 2 ([*-im-*]); kt n/k 75: 1, 9), *ší-nu-ma-an* (kt a/k 477t: 3). Another attestation of “*Šimnuman*” is cited by OAPD for the unpublished text kt 93/k 946. Note that the attestation *ša-nu-ma-an* occurs in a text (AKT 10, 42b) that shows several mistakes (*lá-ak-na*<*-an*> *ḫa-šu-ša-ar* (line 9), and *ḫu-mu-un*<*-da*> *šu* (AKT 10, 42a: 3)), so that it cannot be excluded that *ša-nu-ma-an* should actually read *ša*<*-am*> *nu-ma-an* (thus Günbatti 2016 (= AKT 10): 92). A name *ší-im-nu-ša-an* occurs in AKT 10, 21b: 4, but OAPD cites for this text (kt d/k 9) the presence of “*Šimnuman*” (as the father of “*Hištahšu*”, record nr. 15306). Since the signs ŠA (𐎶) and MA (𐎠) are relatively similar, it seems possible to me that we are dealing with a scribal error or perhaps a reading error by the editor. Unfortunately, the photograph of this text as provided in Günbatti 2016 (= AKT 10): 179 does not show the right edge on which the latter part of this name should be present, and we therefore cannot verify the reading.

832 *ší-im-na-lá* (ICK 4, I 665: 4 ([*š*]-*i*[-*m-n*]-*a-lá*), 6).

833 *ší-im-ni-il₅-kà* (kt 87/k 253: 2), *ší-ni-il₅-kà* (KKS 31a: 6; KKS 31b: 11). Cf. § 5.3.19, where it is hypothesized that the woman's name *ašimnilka* (f.) as cited by OAPD for kt 94/k 518 is in fact a misspelling for *šimnilka*.

shows plene spelling of both its first and its second *a*, *šāma-na*-, indicating that both must have been phonetically real, /šāma-na-/ (I do not understand why Laroche cites the word as “*sam(a)na*–”, as if the second *a* is a dead vowel). This does not really fit Kanišite /smn(a)-/. Although there certainly seems to have been syncope at play in the Kanišite compound names, the difference between Hitt. /šāma-na-/ and Kanišite /smn(a)-/ is to my mind too large.

A better match, at least formally, would be with the toponym *šamna* that is attested in Old Assyrian texts (Nashef 1991: 101–2). Although this would be an attractive connection for the name *šamnuman* / *šanuman* / *šimnuman* / *šinuman*, which could then be interpreted as ‘coming from Šamna’, Zehnder (2010: 92) rightly remarks that it is less attractive for *šamnani* because it would make it “der einzige Name auf -*nika* mit einem Toponym als Erstbestandteil”.

Other possible connections with Hittite lexemes would be with *šamen*- / *šamn*- ‘to pass by, to withdraw, to disappear’ (note that the weak stem *šamn*- probably represents /smn-/, and thus would be formally identical to Kanišite /smn(a)-/) and *šamnae*- ‘to create’. This latter verb must be derived from a nominal stem **šamna*- < PIE **smno*-, which in Kloekhorst 2008: 717–8 was proposed to have meant ‘togetherness’ (derived from PIE **som* ‘together’). Semantically, the latter connection may have more merit, but it is not self-evident either.

5.3.119 *šaptama*-

This element is only found in the name *šaptamanika* (f.),⁸³⁴ which is attested several times. It was Neumann (1974: 279) who proposed to interpret *šaptamanika* as ‘seventh sister’, with the element *šaptama*- representing the ordinal ‘seventh’. It would thus be cognate to the Hittite words *šiptamiya* (KBo 5.1 iv 35) ‘seven-drink’ (duplicated by VII-*miya* (Bo 4951 rev. 15)), *šiptamaizzi* (KBo 49.56 iii 2) ‘he ‘seven’-s’ (duplicated by VII-*izzi* (KUB 51.18 obv. 10)), and *šaptamienzu* (KUB 29.1 iii 2) ‘seven-fold(?)’, all ultimately going back to PIE **septm* ‘seven’. According to Tischler (HEG II: 853), “**šaptama*- ist die luw.

834 *ša-áp-ta-ma-ni-kà* (AKT 4, 6: 5; KTP 43 [1b]: 10, 15). The gender of this name is not fully clear. In KTP 43, *šaptamanika* is the subject of the verb *iš'am=šu* ‘he bought him’, indicating that *šaptamanika* would be a man. However, the object of *iš'am=šu* is clearly a woman (*amtam zipizipi* (line 1) ‘the slave-girl Zipizipi’), which is referred to by the masculine enclitic =*šu*. Therefore, this tablet seems to be untrustworthy when it comes to gender agreement (which is an indication that it was written by an Anatolian person, not an Assyrian, cf. § 4.2.1, point 8). In the other text in which *šaptamanika* occurs, AKT 4, 6, it probably refers to a woman, since it occurs in the context *en-um-a-šur DUMU šu-ki-tim ù ša-áp-ta-ma-ni-kà* (lines 3–5) ‘Ennum-Aššur, son of Šukitum and Šaptamanika’, in which Šukitum must be the father of Ennum-Aššur and Šaptamanika therefore his mother. Combined with the fact that -*nika* is an element that in all other cases refers to women, it is safe to assume that *šaptamanika* was a women’s name, too.

Entsprechung des idg. Zahlworts **septm*”, showing the Luwian development of **e > a*. Zehnder (2010: 266) remarks that this is problematic, since *-nika* in principle always combines with Hittitoid, not Luwic, elements. As I argued in Kloekhorst 2008: 756, I do not think that *šaptama-* in *šaptamanika* (nor in Hitt. *šaptaminzu*, cf. Kloekhorst 2008: 726) needs to be Luwian: it can reflect the original ordinal stem **sptmo-*, with zero-grade of the root.⁸³⁵ If this is correct, we can interpret *šaptamanika* as /sp:t:manéka/ ‘seventh sister’.

5.3.120 *šapun-*

See *išpun-* /*šapun-* /*šupun-*.

5.3.121 *šari(a)-*

This element is only found in the name *šariuman* (m),⁸³⁶ which is attested on a single tablet only. Formally, one could assume a connection with Hittite *šārija-* ‘military formation; file, column’ or *šarije/a-^{zi}* ‘to embroider(?)’. Both do not make much sense semantically, however. Dercksen (2014: 198) assumes that the name must be derived from a toponym “Šari”, but as far as I am aware, such a name has not been found yet.

5.3.122 *šarnik-*

This element is found in the names *šarnikan* / *šarnikat* (m.)⁸³⁷ and *šarnikašu* (g.u.).⁸³⁸ It is unclear to me whether the name *šarnikar* (g.u.)⁸³⁹ belongs here too: an element *-(a)r* is further unknown.

835 Although this form is unattested in any other IE language, a zero-grade stem is structurally to be expected in ordinals, e.g. **pnk^w-tHo-* (Skt. *pakthá-*) ‘fifth’ vs. **pénk^we* ‘five’, **(s)uks-to-* ‘sixth’ (cf. OPr. *uschts*, Av. *xštuua-*) vs. **sueks* ‘six’ (cf. Hoffmann 1965: 254; Lubotsky 2000). In PIE, next to the cardinal **septm*, the ordinal therefore originally should have been **sptmo-*.

836 *ša-ri-ú-ma-an* (AKT 10, 12a: 4; AKT 10, 12b: 6 ([...]ú-ma-an), 12).

837 *šar-ni-kà-an* (AKT 10, 12a: 3; AKT 10, 12b: 2, 9; AKT 10, 16: 19 (*šar-*); AKT 10, 26a: 13 (*šar^l-*); AKT 10, 26b: 1; AKT 10, 62a: 21; AKT 10, 62b: 3; TC 2, 66: 3 (*šar-n[i-...]*); TC 3, 240: 15; kt b/k 121: 4; kt m/k 103: 2; kt o/k 106: 5), *ša-ar-ni-kà-an* (AKT 10, 16: 2; AKT 10, 54b: 2; AKT 10, 54a: 2 (*-an¹²*); ICK 4, I 534: 1, 17 (*-ká-an*); kt 87/k 253: 8; kt 87/k 312: 2, 16; kt 88/k 1082: 1; kt 88/k 1087: 4), *ša-ar-ni-kà-at* (VS 26, 109: 1, 4 (<-at>), 10 (<-at>)). Another attestation of “Šarnikan” is cited by OAPD for the unpublished text kt 91/k 170, and of “Šarnikat” for kt 94/k 156. The name *šarnika* (*šar-ni-kà* (kt 01/k 247a [1b] (Günbatti 2014, nr. 6): 4 (reading not fully clear); kt 01/k 247b [1b] (Günbatti 2014, nr. 7): 23 (before a break))) may be seen as a variant, cf. the discussion about *kikaršan* next to *kikarša* in § 5.3.70.

838 *ša-ar-ni-kà-šu* (AKT 6c, 696: 14 (*šā-ar-*; note that edition reads “Kà-”, but this is probably incorrect, cf. § 5.3.68 above); AKT 8, 312: 1; TTC 16: 15; kt m/k 172: 2), *ša-ar-ni-kà-a-šu* (AKT 8, 161a: 1; AKT 8, 161b: 23).

839 *ša-ar-ni-kà-ar* (KTS 1, 1a: 29).

Already Goetze (1954a: 358) connects this element to the Hittite verb *šarni(n)k-^{zi}* ‘to restitute, to compensate, to replace’. This is attractive, since the name *šarnikan* / *šarnikat*, which must have ended in /-and/ (cf. § 5.2.3), can now be formally equated with the Hittite participle *šarninkant-*. Semantically, the connection is a bit more complicated, however. The Hittite participle *šarninkant-* in principle has a passive meaning ‘compensated, replaced’.⁸⁴⁰ This does not make much sense as a personal name: a person can only be ‘replaced’ if he has died (Laroche’s translation “réparé” (1966: 314) is unattractive). However, it is generally assumed that the Hittite participles in *-ant-* originally could have an active meaning as well (still visible in Hitt. *adant-* ‘having eaten; eaten’), and it therefore becomes possible that *šarninkant-* could have had a meaning ‘having replaced’ as well.⁸⁴¹ This is much more attractive for a personal name, since the person bearing this name could be viewed as the one ‘having replaced’ an earlier deceased sibling. The same line of thought is followed by Landsberger (1954: 123), who translates Kanišite *šarnikašu* as “Ersatzsohn” (although he wrongly assumes that the elements *-ašu* and *-(a)ḫšu* were identical, therefore “-sohn”).

All in all, we can analyse the Kanišite names as follows: *šarnikan* / *šarnikat* = /srninkánd/ ‘(the one) who has replaced’; *šarnikašu* /srnink-as:u/ ‘replacing-beloved one’.

5.3.123 *ša/iš(a)-*

This element is found in the names *šašaḫšušar* / *šišaḫšušar* (f.),⁸⁴² *šašalka* / *šašalika* / *šišalika* (f.),⁸⁴³ and *šašanika* (f.).⁸⁴⁴ It is remarkable that all these names are women’s names.

There can be no doubt that *šaš(a)-* and *šiš(a)-* represent a single element, since the *amtum*-wife of Aššur-nādā, whose name is often spelled *šišaḫšušar* (in CCT 3, 7; KTS 1, 13a; KTS 1, 13b; OAA 1, 51; OAA 1, 55; TC 2, 47; VS 26, 19), occurs

840 E.g. KUB 16.66 obv. 16, 30 *mān=m=aš parā šarninkanza* ‘if it (i.e. the festival) is, however, fully made up for’, cf. CHD Š: 285; KUB 19.3 i 10 *anda ŪL šarninkanza* ‘not replaced’, cf. Puhvel HED Ša: 188.

841 Cf. Haase (1982: 34) who translates the Hittite sentence *šarninkanza=ua=za eš* (without reference to the place of attestation) as “Sei ein Schadenersatzpflichtiger!”.

842 *ša-ša-aḫ-šu-šar* (AKT 1, 15: 2; AKT 10, 52: 3; AKT 10, 55a: 2, 7; AKT 10, 55b: 6 ([*-šu-*]), 8 ([*-šu-šar*]), 14; RA 60, Frank: 2; kt c/k 653: 2; kt c/k 1638b: 19), *šī-ša-aḫ-šu-šar* (AKT 10, 12a: 6; AKT 10, 12b: 5 ([*...-]*šū-šar), 11; CCT 3, 7a: 2; KTH 26: 8; KTH 40: 4 ([*-ša-*]); KTS 1, 13a: 4; KTS 1, 13b: 3 (<*-šu->*); OAA 1, 51: 2; OAA 1, 55: 3; TC 2, 47: 2, VS 26, 19: 3; VS 26, 20: 2).

843 *ša-ša-li-kà* (TC 3, 214e [1b]: 9 ([*...]*li-kà), 11; TC 3, 214t [1b]: 2, 5, 14), *šī-ša-li-kà* (kt 87/k 303: 4). “Šašalka” is cited by OAPD for the unpublished text kt 94/k 782.

844 *ša-ša-ni-kà* (AKT 10, 24a: 7; AKT 10, 24b: 3, 10).

in AKT 1, 15 with the name *šašaḥšušar*. As argued in § 3.2.3, this means that the element *šaš(a)-* / *šiš(a)-* must have started in a consonant cluster, /ss(a)-/. Cf. § 5.2.10 for the idea that *šašalka*, *šašalika* and *šišalika* all three represent a single underlying phonological form, viz. /sslk:á/.

According to Goetze (1954a: 353), the name *šašalika* can be connected to the toponym ^{URU}*šāšana*.⁸⁴⁵ This is formally unlikely, however, since we would expect to find some trace of the *n* in the Kanišite names (e.g. ***šašanalka*). Zehnder (2010: 274) states that there are several Hittite and Luwian lexemes that could be a match to Kanišite *šaš(a)-* / *šiš(a)-*, namely Hitt. ^{GIŠ}*šeša-* ‘fruit’, HLuw. *sasan-* ‘seal’, and Hitt./Luw. *šaša-* ‘antelope (vel sim.)’. Of these three, the connection with HLuw. *sasan-* seems impossible to me, since, just as in the case of Goetze’s connection with ^{URU}*šāšana*, the absence of the *-n-* of *sasan-* would be unaccounted for. Connecting Kanišite /ss(a)-/ with Hitt. ^{GIŠ}*šeša-* (but note that the basic stem of this word seems to be *šēšan-*, cf. CHD Š: 445) and Hitt./Luw. *šaša-* (in fact *šāš(š)a-*, cf. CHD Š: 301) would only work if we assume a syncope in Kanišite, which may not be impossible, cf. section 9.2. Semantically, Zehnder prefers the connection with the word meaning ‘antelope (vel sim.)’, since “‘Antilope’ wäre als Frauennamen bildendes Element typologisch charakteristisch, ein vergleichbares Tier ist als Frauennamen zum Beispiel in gall. *Iurca* f. ‘Reh’ bezeugt” (2010: 301).

Other possibilities are to connect /ss(a)-/ with the Hittite verbs *šeš-^{zi}* / *šaš-* ‘to sleep, to rest’ and *še/išš-^{zi}* ‘to prosper, to proliferate’. The weak stem of *šeš-* / *šaš-* ‘to sleep, to rest’ is /səs-/ < *ss-, and therefore matches Kanišite /ss(a)-/ perfectly. The formal details regarding *še/išš-^{zi}* ‘to prosper, to proliferate’ are difficult,⁸⁴⁶ and unfortunately, of this verb no weak stem forms are attested, so that we do not know whether this stem could have been **šašš-*. Semantically, the meaning ‘prosper, proliferate’ would match an onomastic element very well, however: we could then translate the Kanišite names as follows: *šašaḥšušar* / *šišaḥšušar* /ss-á-hsus:r/ ‘prosperous female child’; *šašalka* / *šašalika* / *šišalika* /ss-lk:á/ ‘prosperous-and-bright’; *šašanika* /ss-a-néka/ ‘prosperous sister’.

845 Cf. Del Monte & Tischler 1978: 355.

846 It seems to show a stem *šešt-* as well, but this may be secondary, cf. Kloekhorst 2008: 756–7.

5.3.124 *šili(a)-*

This element is only found in the name *šiliuman* (m.),⁸⁴⁷ which is attested several times. Formally, it resembles Hittite *šēli-* ‘grain pile, grain storage’. Semantically, this connection fits the fact that *-uman* is often found with toponyms and nouns denoting locations. We may therefore hesitatingly assume that *šiliuman* can be analysed as /seliomán/ ‘coming from the grain storage’.

5.3.125 *šimiš-*

This element is found in the names *šimiškunien* (f.)⁸⁴⁸ and *šimišmei* (g.u.),⁸⁴⁹ which both are seldom attested. Although the Hittitoid status of the elements *-kunian* / *-kunien* and *-mei* has been disputed, it has been argued in § 5.2.8 and 5.2.11, respectively, that their position amongst the other Hittitoid final elements is firm enough to assume that they, too, belong to this group. This implies that the element *šimiš-* is Hittitoid as well. Formally, we may compare it to the Hittite verb *šamešije/a-^{zi}*, *šimišije/a-^{zi}* ‘to burn for fumigation’, but semantically, such a connection is not self-evident.

It is remarkable that *šimiš-* occurs with the two exact same final elements, *-kunian* / *-kunien* and *-mei*, as the element *šīwiš-* does (cf. § 5.3.128, below). As we have seen above as well (at the lemma *nima-*, which is sometimes equated with *niwa-*), in Old Assyrian orthography occasionally a *w* is spelled by an *m*, although the interpretation of this phenomenon is difficult (Kouwenberg 2017: 79). In principle, this could give way to interpreting *šimiškunien* (attested twice) and *šimišmei* (attested once) as variants of *šīwiškunian* and *šīwišmei*. See at the treatment of *šīwiš-* (§ 5.3.128) for a possible (but difficult) connection with *šīwaš-*.

847 *šī-li-ú-ma-an* (AKT 6b, 406: 26; AKT 8, 157: 2; AKT 10, 18a: 2, 11; AKT 10, 18b: obv. 1 (*šī-li-[-...]*), rev. 5; kt b/k 260a: 5, 10; kt b/k 260b: 3 (*[-a]n*), 18 (*[-[l]i-ú-m[a]-]*); kt f/k 61 [1b]: 1, 4, 7; kt p/k 4 [1b]: 1). Another attestation of “*Šiliuman*” is cited by OAPD for the unpublished text kt f/k 181 [1b].

848 *šī-mi-iš-ku-ni-en₆* (ICK 4, I 674: obv. 6 (*šī-mi-iš-ku[-...]*); kt 88/k 971: 38 (cf. Donbaz 2008a: 214–7; Dercksen 2015: 57–8)). It cannot be excluded that the attestation of ICK 4, I 674 should instead be read *šī-mi-iš-ku[-ni-an]*, with the normal spelling of the element *-kunian* / *-kunien*.

849 *šī-mi-iš-me-i* (ICK 4, I 618: 10).

5.3.126 *šīwan(a)-*

This element is found in the names *šīwanaḥšušar* (f.),⁸⁵⁰ *šīwanala* (g.u.),⁸⁵¹ *šīwanalka* (f.),⁸⁵² and *šīwanuman* (g.u.).⁸⁵³ According to Bilgiç (1945–1951: 3), *šīwan(a)-* “dürfte das hethitische Wort für „Gott“ enthalten”, but he does not give details about this analysis.⁸⁵⁴ Zehnder (2010: 275) is more explicit, by connecting it to Hittite **šīwātar / šīwānn-* ‘deity’ (cf. Kloekhorst 2008: 763), “eventuell mit dem Wert eines Theonyms”. If correct, we may analyse these names as follows: *šīwanaḥšušar* = /siwan:-á-hsus:r/ ‘deity-born (girl)’, *šīwanala* = /siwan:ala/ ‘deity-like(?) one’, *šīwanalka* = /siwan:-lk:á/ ‘deity-like(?)’-and-bright one’, *šīwanuman* = /siwan:-omán/ ‘coming from a deity’.

5.3.127 *šīwaš-*

This element is found in the names *šīwaškunian* (f.)⁸⁵⁵ and *šīwašmei* (m.).⁸⁵⁶ Although the Hittitoid status of the elements *-kunian / -kunien* and *-mei* has been disputed, it has been argued in §§ 5.2.8 and 5.2.11 that their position amongst the other Hittitoid final elements is firm enough to assume that they were Hittitoid, too. This implies that the element *šīwaš-* is Hittitoid as well. Cf. § 5.2.11, where *šīwaš-* was analysed as possibly corresponding to Hittite **šīwaš*, the expected original gen.sg. form of the noun *šiu-* ‘god’ (attested as renewed *šīunaš*).

See at the treatment of *šīwiš-*, below, that this element, just as *šuiš-*, may be a variant of *šīwaš-*.

5.3.128 *šīwiš-*

This element is attested in the names *šīwiškunian* (g.u.)⁸⁵⁷ and *šīwišmei* (m.).⁸⁵⁸ See at the treatment of *šīmiš-* (§ 5.3.125) for the possibility that this element is in fact a variant of *šīwiš-*, showing a spelling with *-m-* instead of *-w-*.

850 Cited as *šī-wa-na-aḥ-šu-šar* by Balkan 1992: 15 without giving a source.

851 *šī-wa-na-la* (AKT 1, 4: 3).

852 *šī-wa-na-al-kà* (AKT 10, 58a: 1, 9; AKT 10, 58b: 6 ([-*al-kà*])).

853 Cited as “Šiwanuman” by OAPD for the unpublished text kt 94/k 137.

854 Similarly Alp 1952: 252¹³; Goetze 1954a: 359⁷⁴.

855 *šī-wa-áš-ku-ni-an* (kt n/k 73: 9), *šī-wa-áš-ku-ni-a-an* (kt n/k 39 [1b]: 8 (*šī*-[...]), 28; kt n/k 73: 6; kt 89/k 367 [1b]: 32).

856 *šī-wa-áš-me-i* (ATHE 14: 23; AuOr 8, 197–205: 2; BIN 4, 203: 20; BIN 4, 209e: 3, 8, 19; BIN 4, 209t: 2, 15; BIN 4, 231: 2; KTS 1, 52a: 11; kt c/k 500: 4, 7; kt 88/k 1087: 15; kt 89/k 358: 12; kt 99/k 138a [1b]: 6). Another attestation of “Šiwašmi” is cited by OAPD for the unpublished text kt v/k 171.

857 *šī-wi-iš-ku-ni-an* (kt c/k 681: 8).

858 *šī-wi-iš-me-i* (AKT 10, 12a: 5; AKT 10, 12b: 13; kt f/k 163a: 1; kt f/k 163b: 9).

It is remarkable that *šīwiš-* occurs with the two exact same final elements, *-kunian* and *-mei*, as the element *šīwaš-* does, which moreover is a look-alike of *šīwiš-*. Another look-alike is *šuišmei* (g.u.),⁸⁵⁹ which is attested only once. Zehnder (2010: 7) therefore states that “Šī-wa-áš-, Šī-wi-iš und Šu-iš- dürften Graphien für dasselbe Element sein”.⁸⁶⁰ Although the fact that all these elements occur with *-kunian* and *-mei* is indeed suspect, it is not easy to view them as orthographic variants of a single underlying element. The alternation between *a* (in *šīwaš-*) and *i* (in *šīwiš-* and *šuiš-*) does not fit the rules of the alternation in the names as described in § 3.2.6: besides the labial consonant *w* we would expect an epenthetic vowel *u*, not *i*. A connection between *šīwiš-* and *šuiš-* is in principle possible, if we assume that they both represent /swis-/, and that the spelling *šīwiš-* represents [səwis-], with an epenthetic vowel.⁸⁶¹

The only way I can think of to connect the elements *šīwaš-*, *šīwiš-* and *šuiš-* is by assuming that they are morphological variants of each other. It was argued in § 5.2.11 that *šīwaš-* may represent the original gen.sg.⁸⁶² of the Hittite noun *šiu-* ‘god’ < **diéu-*, and we may thus assume that it reflects a preform **diéu-os*. The original PIE gen.sg. of this lexeme was **diu-és*, however (cf. Skt. gen.sg. *divás* < **diu-és*), which according to Hittite sound laws should have yielded either /sués/ or /siués/, depending on whether the **i* was lost in the process of assibilation of **di-* > /s-/ or not (cf. Kloekhorst 2008: 91–2). If /sués/ was the regular outcome, we may assume that it was adapted to /siués/ on the basis of nom.sg. */*śius*/ < **diéu-s* and acc.sg. */*śiun*/ < **diéu-m*.⁸⁶³ With all this in mind, we may assume that Kanišite *šuiš-* and *šīwiš-* represent /swes-/ and /siwes-/, respectively, the expected outcomes of PIE **diu-és*. The element *šīwaš-* /*śiwas-*/ < **diéu-os* may then be regarded as a younger replacement of this original form, in which the stem of the nom. and acc.sg. was introduced

859 Cf. footnote 866 for its place of attestation.

860 The identity of these elements may be supported by the name *amašīwašmiš*, which is attested on the envelope kt b/k 260a (*a-ma-šī-wa-áš-[mi]-iš* (kt b/k 260a: 2)), whereas the corresponding tablet reads *amašuišmiš* (*a-ma-šu-[i]š-mi-[i]š* (kt b/k 260b: 16)). Although an element *ama-* is further unknown, it may be attractive to analyse these names as *ama-šīwaš-miš* and *ama-šuiš-miš*, which would support an equation between *šīwaš-* and *šuiš-*. Note that if we interpret the final *-š* of this name as the Hittitoid ending of the genitive case, and read its last element as *-me-iš*, we could even assume that we are dealing here with *ama-šīwaš-mei* / *ama-šuiš-mei*, which would make a connection to *šīwašmei* and *šuišmei* even more attractive.

861 Cf. § 3.2.6 for the observation that in initial clusters of the shape /(t)sC^{lab}-/ the *i* is used as an epenthetic vowel, and not *u*: e.g. *šimnuman* /smnmón/ and *zipizipi* /tspitspi/.

862 In Hittite itself the gen.sg. of the word for ‘god’ is *šiu-naš*, containing the renewed stem *šiu(na)-*.

863 Cf. Kloekhorst 2014: 487.

and the ending was replaced by the productive gen.sg. ending *-os.⁸⁶⁴ It must be stressed that all this remains speculative, of course.

5.3.129 *šuḫišun(a)*-(?)

This element is only found in the name *šuḫišunuman* (m.),⁸⁶⁵ which is attested only once. I know of no good Hittite comparandum for it. Cf. § 5.3.114 for the possibility that this name should be read *šuḫiš'numan* and is in fact identical to *šaḫuišnuman*.

5.3.130 *šuiš-*

This element is only attested in the name *šuišmei* (g.u.).⁸⁶⁶ Cf. the treatment of *šiwīš-* (§ 5.3.128) for a discussion.

5.3.131 *šumi(a)*-

This element is found in the names *šu'minika* (g.u.),⁸⁶⁷ *šumila* (m.),⁸⁶⁸ and *šumiuman* (m.).⁸⁶⁹ I know of no good Hittite comparandum.⁸⁷⁰ In principle, one may assume that it is identical to the element *šuni-* (§ 5.3.134) if one assumes that both go back to an earlier **šumni-* (just as *ḫaršumn(a)*- surfaces both as *ḫaršum-* and *ḫaršun-*). This does not help in finding a possible Hittite connection, however.

5.3.132 *šumir(a)*-

This element is only found in the name *šumiraḫšu* (g.u.),⁸⁷¹ which is attested only once. I know of no good Hittite comparandum.

864 Cf. Kloekhorst 2008: 213–4.

865 *šu-ḫi-šu-nu-ma-an* (kt m/k 34: 2).

866 *šu-iš-me-i* (kt c/k 1364: 17).

867 *šu'3-mi-ni-kà* (ICK 2, 1: 5). This form is read thus by Balkan 1965: 146. See Zehnder 2010: 276–7 for a discussion of the reading of this name and of the problems determining the gender of the person carrying this name.

868 *šu-mi-lá* (AKT 10, 13b: 2; kt i/k 67: 2 (cf. Balkan 1965: 147)).

869 *šu-mi-ú-ma-an* (kt c/k 34: 5; kt e/k 158, 13, 16; kt f/k 67a: 5 (cf. Balkan 1965: 147)).

870 Likewise Zehnder (2010: 277): “*šumi-* scheint keinen Anschluss und den bekannten anatolischen Wortschatz zu haben”. Zehnder cites *šumiawa* (referring to Laroche 1966: 165) as another name belonging to this group. However, since *-awa* does not occur with any other Hittitoid element, this name should be kept apart from the others starting in *šumi-*. Cf. the fact that OAPD cites the attestation of *šu-mi-a-wa* of KTH 35, 20 as Assyrian “Šūmī-awa”.

871 *šu-mi-ra-aḫ-šu* (kt c/k 468: 16).

5.3.133 *šū'un(a)-*

This element is found in the name *šū'unuman* (g.u.),⁸⁷² which is attested once. The plene spelling with the sign *Ú* is indicated here as *šū'un(a)-*. Note that in Old Assyrian orthography, plene spelling may represent the presence of a so-called weak consonant, namely *ʔ*, *w*, or *y* (cf. Kouwenberg 2017: 70f.), but it need not be relevant. Whether the element represents */sun(a)-/*, */suʔun(a)-/*, */suyun(a)-/* or */suwun(a)-/*, I know of no good Hittite comparandum for it.⁸⁷³ If the element is */sun(a)-/*, it may be equated with the element *šun(i)-* of the following paragraph.

5.3.134 *šun(i)-*

This element is only found in the name *šunilka* (f.),⁸⁷⁴ which is attested in one text only. Since e.g. *ašilka* alternates with *ašalka*, both representing an underlying */aslk:á/*, it cannot be excluded that *šunilka* represents an underlying */sunlk:á/*, and that the *i* of *šun(i)-* is not real. If so, *šun-* may be equated to *šū'un(a)-* if the plene spelling in the latter element (*šū-ú-n^o*) is phonologically empty (cf. the preceding paragraph).

Formally, *šun(i)-* may be compared with Hittite *šunna-i* / *šunn-* 'to fill', but this does not make much sense semantically (*šunilka* = */sun:lk:á/* 'full-bright one?').

In principle, it cannot be excluded that *šun(i)-* is to be equated with *šumi(a)-* through an earlier **šumni-*, the cluster *-mn-* of which assimilated either to *-m-* or to *-n-*, depending on the environment (cf. *ḫaršumn(a)-*, which developed into both *ḫaršum(a)-* and *ḫaršun(a)-*). However, this does not make it easier to find a meaningful connection with Hittite lexemes.

5.3.135 *šunun(a)-*

This element is only found in the name *šununuman* (g.u.),⁸⁷⁵ which is attested in a single text only. I know of no good Hittite comparandum for it.

⁸⁷² *šū-ú-nu-ma-an* (kt o/k 55: 3 (cf. Dercksen 2014: 198)).

⁸⁷³ Dercksen's citation of a toponym "Šu'un" (2014: 198) with which he connects this name seems to be based on this name only: I know of no other evidence for such a toponym.

⁸⁷⁴ *šū-ni-il₅-kà* (AKT 8, 157: 1, 7, 13, 19).

⁸⁷⁵ Cited as "Šununuman" by OAPD for the unpublished text kt 94/k 282.

5.3.136 *šupi-*

This element is found in the names *šupiahšu* (m.),⁸⁷⁶ *šupiahšušar* (f.),⁸⁷⁷ *šupianika* (f.),⁸⁷⁸ *šupiašue* (f.),⁸⁷⁹ *šupilka* / *šupialka* (f.),⁸⁸⁰ *šupimei* (m.),⁸⁸¹ and *šupiuman* (m.),⁸⁸² and is thus one of the best attested Hittitoid initial elements. It is also found together with elements that do not seem to be Hittitoid (*šupiana*^(?) (m.),⁸⁸³ *šupiepra* (m.),⁸⁸⁴ *šupikunašu* (m.),⁸⁸⁵ *šupilapra* (g.u.),⁸⁸⁶

- 876 *šu-pi-aḫ-šu* (C41 Landsberger: 4, 7, 12; ICK 1, 16b: 7; ICK 4, I 527: 8 (*šu-*)), *šu-pi-a-aḫ-šu* (AKT 10, 12a: 19; BIN 6, 226e: 7 (*[-pi-a]-aḫ-*); BIN 6, 226t: 2 (*[-pī]-*), 16; ICK 1, 16a: 1; OrNS 52, 195–196, 1e: 30), *šu-pi-aḫ-šu* (AKT 8, 293a: 2, 4, 7, 14; AKT 8, 293b: 10, 13), *šu-pi-a-aḫ-šu* (AKT 10, 12b: 2 (*šu-p[i-...]*); BIN 4, 190: 17; BIN 6, 226t: 8 (*[-aḫ]-*); BIN 6, 226e: 13, 22; ICK 1, 172: 19; KTH 35: 23; OrNS 52, 195–196, 1e: 1; Sadberk 29: 5; TC 3, 237: 21; TC 3, 253: 5, 13; kt a/k 805a: 2, 7, 10, 19; kt a/k 805b: 4, 8, 11, 17; kt b/k 134e: 2, 3, 5, 7 (*[-pi-a]-*); kt b/k 134t: 2, 19; kt k/k 35a: 12; kt k/k 35b: 6), *šu-pi-aḫ-šu-ú* (AKT 1, 79: 9). Other attestations of “Šupiahšu” are cited by OAPD for the unpublished texts kt k/k 34, kt 94/k 166, kt 94/k 1014. The few attestations *šu-up-a-aḫ-šu* (kt n/k 71: 5 (cf. Donbaz 1988: 48–9); kt t/k 32: 4, 8, 12, 14) may stand for *šupiahšu* as well, with the broken spelling indicating the presence of a y, cf. Kouwenberg 2017: 40.
- 877 *šu-pi-aḫ-šu-šar* (kt m/k 102: 9, 10, 13; kt m/k 103: 9), *šu-pi-a-aḫ-šu-šar* (CCT 3, 31: 1, 5). Another attestation of “Šupiahšušar” is cited by OAPD for the unpublished text kt k/k 34.
- 878 *šu-pi-a-ni-kà* (ICK 1, 19a: 8; ICK 1, 19b: 2; TPAK 1, 31: 5; TPAK 1, 156a: 2; TPAK 1, 156b: 6; kt c/k 1637: 5, 7), *šu-pi-a-ni-kà* (AAA 1, 8: 2, 6, 12; AKT 3, 42: 4, 8; AKT 9a, 85: 2; ICK 1, 3: 26; ICK 1, 35a: 5, 7; ICK 1, 35b: 5; TC 3, 252: 3; TPAK 1, 39: 22; kt c/k 681: 7; kt c/k 1637: 10; kt 89/k 367 [1b]: 29). Another attestation of “Šupianika” is cited by OAPD for the unpublished text kt 91/k 170.
- 879 *šu-pi-áš-ú-e* (TPAK 1, 35: 3), *šu-pi-a-šu-we* (kt 80/k 25: 4, 5, 10), *šu-pi-áš-we* (TPAK 1, 158: 2, 10 (*-áš-*); kt j/k 288b: 18), *šu-pi-áš-we* (kt c/k 681: 11), *šu-pi<-áš>-we* (TPAK 1, 93: 15 (cf. Zehnder 2010: 279 for this possible reading)). Cf. § 5.2.4 for the possible attestation of *šupiašu<e>* on kt 94/k 141.
- 880 *šu-pi-il₅-kà* (TPAK 1, 161a: 3; TPAK 1, 161b: 4 (*šu-pi-[...]*), 6). Note that OAPD incorrectly cites this name as “Šupialka”. A real *šupialka* is attested as *šu-pi-a-al-[k]à* (kt o/k 50: 3 (Albayrak 2005: 26)).
- 881 *šu-pi-me-i* (AKT 10, 7b: 2), *šu-pi-me-i* (AKT 10, 7a: 16).
- 882 *šu-pi-ú-ma-an* (AuOr 8, 197–205: 7; KKS 8a: 15; KKS 8b: 15; KTS 1, 46a: 12), *šu-pi-ú-ma-an* (ICK 1, 115e: 6; ICK 1, 115t: 5; KTS 1, 46b: 5 (*-pi-*); ICK 4, I 647: 3; kt r/k 15 [1b]: 31; kt š/k 3 [1b] (Günbatti 2014, nr. 14): 1; kt 99/k 138b [1b]: rev. 8).
- 883 *šu-pi-a-na* (ICK 4, I 837: 3). Zehnder (2010: 44) interprets this name as a hypocoristic abbreviation of *šupiahšu*, but Kryszat (2004: 45²) states that we should read this name as “*Ku¹-bi₄-a-tal¹*”.
- 884 *šu-pi-e-ip-ra* (AKT 10, 41b: 2), *šu-pi-ip-ra* (AKT 10, 43b: 3; AKT 10, 44b: 1; kt c/k 1639b: 5), *šu-up-ip-ra* (AKT 8, 187: 3).
- 885 *šu-pi-kū-na-šu* (TC 3, 191: 9). See Zehnder (2010: 7) for the view that this name belongs to the so-called *kuni*-names and therefore is not Hittitoid.
- 886 *šu-pi-lá-áp-ra* (KUG 8: 7). See Zehnder (2010: 7) for the non-Hittitoid character of this name.

šupimani^(?) (f.)⁸⁸⁷),⁸⁸⁸ and these names are therefore left out of consideration here.

Since Goetze (1931: 261), the name *šupiuman* is generally seen as identical to the name *ṡuppiuman* as attested in Hittite texts.⁸⁸⁹ According to Goetze, the element *šuppi-* of the latter is identical to the element *šuppi-* in the Hittite name *ṡuppiluliuma*, about which he remarks: “Durch die Schreibung des Namens *Šuppiluliumaš* durch KUG.TÚL-*ma(š)* [in which KUG.TÚL = KÙ.PÚ means ‘sacred pont’, A.K.] haben die Hethiter selbst das Element *šuppi* mit ihrem Worte *šuppiš* «rein» in Verbindung gebracht.” The identification of Kanišite *šupi-* with Hittite *šuppi-* ‘purified, sacred’ has been generally accepted ever since.⁸⁹⁰

Not only does the identification of the Kanišite element *šupi-* with the Hittite onomastic element *šuppi-* reveal its underlying meaning, it also provides details about its phonological interpretation. The geminate spelling of *-pp-* in Hitt. *šuppi-* represents a fortis, long /p:/. Moreover, in the name *ṡuppiluliuma* the element *šuppi-* is attested once with plene spelling with the sign U, *ṡu-u-up-pí-lu-li-u-ma* (KUB 19.10 iv 2), which points to the presence of the vowel /o/: /sop:i-/.

Since the Hittite adjective *šuppi-* /*šuppai-* ‘purified, sacred’ is a clear *i*-stem, all Kanišite names starting in *šupia-* must be viewed as containing the linking *-a-* (cf. section 5.1).

All in all, we can assume the following interpretations of the names containing *šupi-*: *šupiaḫšu* = /sop:i-á-hsu/ ‘sacred-born’; *šupiaḫšušar* = /sop:i-á-hsus:r/ ‘sacred-born girl’; *šupianika* = /sop:i-a-néka/ ‘sacred sister’; *šupiašue* = /sop:i-ás:ue/ ‘sacred-beloved girl’; *šupilka* = /sop:i-lk:á/ ‘sacred-bright(?) one’; *šupiuman* = /sop:i-omán/ ‘coming from a sacred one’.⁸⁹¹

5.3.137 *šupie/an(a)-*

In kt c/k 857: 1 and in kt v/k 153: 6, 12, we come across a man called *šu-pí-e-nu-ma-an*, who is a son of *pirua*. In kt v/k 159: 4, 9, we come across a man

887 *šu-pí-ma-ni* (KTH 20: 2). This name is sometimes read *šupikuni* (with KU instead of MA), cf. its treatment in section 4.7, in the paragraph on *-kuni*-names.

888 For the elements *šupien-* and *šupišamn-*, see their own entries below.

889 Cf. footnote 484 for attestations.

890 E.g. Bilgiç 1945–1951: 2, 17; Laroche 1966: 298; Zehnder 2010: 278–9. Note that Goetze himself initially was more cautious: “Das [viz. the sumerographic spelling of *Šuppiluliuma* as KÙ.PÚ-*ma*, A.K.] beweist an und für sich nichts, denn es kann auch eine der rein spielerischen gelehrten Schreibungen sein, stimmt aber in diesem Falle vielleicht doch” (1931: 261). Later on, he regards the connection as certain, e.g. in Goetze 1954a: 356.

891 Cf. Landsberger (1954: 122), who translates *šupiuman* as “von einem Reinen Stammend”.

called *šu-pí-i-nu-ma-an*, who is also a son of *pirua*.⁸⁹² It is therefore attractive to assume that all attestations refer to a single person. It is not easy, however, to interpret the two different spellings as representing a single underlying form: how do the two sequences *-pí-e-* and *-pí-i-* relate to each other? Since the spelling with *-e-* is found for a *šupienuman*, son of *mala*, as well,⁸⁹³ I am inclined to assume that the original form is *šupienuman*. This is supported by the existence of the name *šupianuman*,⁸⁹⁴ which is attested several times on a single tablet. If we assume that *šupianuman* is a morphological variant of *šupienuman*, we are dealing with an ablaut between *e* and *a*, which is well known in Hittite. In this way, we can assume that the element was *šupian-* / *šupien-*, which would show an alternation comparable to the one in *-kunian* / *-kunien*, *-uman* / *-umen*, but also *ašiat* / *ašiet* and *nakiliat* / *nakiliet*. This implies that *šupian-* / *šupien-* goes back to a Hittite *n*-stem with ablaut between *-an-* and *-en-*.

A Hittite comparandum to this element may be found in the mountain name ^{HUR.SAG}*šuppinna*,⁸⁹⁵ which in principle could be read ^{HUR.SAG}*šuppienna* as well.

5.3.138 *šupišamn-*

This element is only found in the name *šupišamnuman* (g.u.),⁸⁹⁶ which is attested twice. It seems to be a combination of the elements *šupi-* and *ša/immn-*. Laroche (1966: 257) assumes it reflects Hitt. “**suppi-sam(a)na* ‘fondation sacrée’”, which is based on his analysis of *ša/immn-* (§ 5.3.118). Zehnder (2010: 92) proposes that there may have existed a town called **šupišamna*, on which the name *šupišamnuman* would be based.

For further treatment of the elements *šupi-* and *ša/immn-*, see their own entries.

892 OAPD cites an attestation of “Šuppinuman” for the unpublished text kt 94/k 1787, without indicating the exact spelling. Note that OAPD cites another attestation of “Šuppinuman” for KKS 8a–b, but here we only find *šu-pí-ú-ma-an* (KKS 8a: 15; KKS 8b: 15). The attestation “Šupinuman”, which OAPD cites for kt 91/k 183, probably refers to the name that actually reads *šupianuman* (cf. footnote 894). It therefore is unclear how reliable OAPD’s citation of “Šuppinuman” for kt 94/k 1787 is.

893 *šu-pí-e-nu-ma-an* (AKT 10, 8a: 13; AKT 10, 8b: 1, 15), *šu-pí-e-nu-ma-an* (AKT 10, 8a: 17).

894 *šu-pí-a-nu-ma-an* (kt 91/k 183e: 3; kt 91/k 183t: 1 (-*nu*-<<*a*>>-*ma*-)); *šu-pí-a-nu-ma-[an]* (kt 91/k 183e: 8).

895 Cf. Del Monte & Tischler 1978: 368.

896 *šu-pí-ša-am-nu-ma-an* (AKT 10, 2a: 5; AKT 10, 2b: 5, 12; TC 2, 73: 2), *šu-pí-ša-am-nu-ma-an* (kt 91/k 123: 4).

5.3.139 *šupiun(a)-*

This element is only found in the name *šupiunuman* (g.u.),⁸⁹⁷ which is attested on one pair of tablet and envelope only. It is formally reminiscent of the element *šupie/an(a)-*, which is only attested together with the element *-uman* as well: *šupienuman* and *šupianuman*. It therefore is tempting to assume that the name *šupiunuman* may be related to these. However, I do not know how to explain an alternation between *a*, *e* and *u*.

5.3.140 *šupud-*

See *išpud-* / *šupud-*.

5.3.141 *šupun-*

See *išpun-* / *šapun-* / *šupun-*.

5.3.142 *takšan(a)-*

This element is only found in the name *takšanuman* (g.u.),⁸⁹⁸ which is attested several times. According to Goetze (1931: 262) it may be connected with Hittite *takšan-* ‘centre, joint, combination’, which would yield for *takšanuman* an analysis /taksn-omán/ ‘coming from the centre’ (note that Hitt. *takšan* = /táksən/ < *téks-n). Alternatively, we may assume a connection with Hittite *takšātar* / *takšann-* ‘plain, level’, which would mean that *takšanuman* represents /tksan:-omán/ ‘coming from the plains’ (Hitt. *takšann-* = /təksán:-/ < *tks-ótn-).⁸⁹⁹ A third option is that *takšan(a)-* must be equated with the toponym ^{URU}*takšanā*,⁹⁰⁰ which would give for *takšanuman* the analysis /taksanomán/ ‘coming from Takšanā’.⁹⁰¹ Since it is quite likely that the toponym ^{URU}*takšanā* in the end goes back to either *takšan-* or *takšātar* / *takšann-*, this latter option does not necessarily contradict the former two options.

5.3.143 *talhama-*

This element only occurs in the name *talhamašue* (f.),⁹⁰² which is attested only once. It is likely to be identical to the women’s name *talhama* (f.),⁹⁰³ which

897 *šu-pi-ú-nu-ma-an* (AKT 10, 54a: 1; AKT 10, 54b: 1).

898 *ták-ša-nu-ma-an* (kt 73/k 14 [1b]: 10 (note that OAPD cites a “Takšanuma” for this text)), *ta-ak-ša-nu-ma-an* (ICK 2, 43: 3; KTH 36: 17, 22; kt c/k 34: 7; kt c/k 204: 17).

899 Cf. Kloekhorst 2008: 815.

900 Cf. Del Monte & Tischler 1978: 386.

901 Cf. Tischler HEG III: 45; Dercksen 2014: 198.

902 *tal-ḥa-ma-šu-e* (kt r/k 15 [1b]: 6).

903 *tal-ḥa-ma* (ICK 1, 19a: 5, 13, 16, 21; ICK 1, 19b: 8, 13, 19; ICK 1, 115: 5; ICK 4, 1 674: 4; TC 2, 76: 1, 7)). Another attestation of “Talhama” is cited by OAPD for the unpublished text kt 94/k 517.

would give for *talḥamašue* the meaning ‘beloved by Talḥama’. I know of no Hittite comparandum for *talḥama* itself, however.

5.3.144 *tali(a)-*

This element is found in the name *taliuman* (g.u.),⁹⁰⁴ which is attested several times. It may be identical to the name *talia* (m.), which is attested relatively often.⁹⁰⁵ Formally, there are several Hittite lexemes that could in principle be compared to this element: *dāla*-ⁱ / *dāli*- ‘to let, to leave’, *talli(ia)*- ‘pleasant(?)’, *talliē/a*-^{zi} ‘to pray, to evoke (a deity)’, and the toponym ^{HUR.SAG}*daliia*-, the name of a mountain.⁹⁰⁶ For *taliuman*, the latter option is attractive, and we may interpret *taliuman* as /taliomán/ ‘coming from the mountain Taliia’.⁹⁰⁷ This is less attractive for the independent name *talia*, however, which would semantically rather fit a connection with *talli(ia)*- ‘pleasant(?)’ (Tischler HEG III: 58: “willkommen, angenehm”). This seems to indicate that *taliuman* and *talia* were not related to each other.

5.3.145 *tamna-*

This element is found in the names *tamnašu* (g.u.)⁹⁰⁸ and *tamnanika* (f.).⁹⁰⁹ It may be identical to the independent name *tamna* (m.),⁹¹⁰ which is attested a few times. The name *tamnašu* is convincingly equated by Goetze (1954a: 357) and Laroche (1966: 173) to the Hittite name ^m*damnaššu*-,⁹¹¹ confirming the

904 *ta-li-ú-ma-an* (AKT 1, 79: 7 (<-an>); CCT 5, 34: 15, 18; CCT 6, 16b: 32; kt 91/k 128e: 3, 6; kt 91/k 128t: 2).

905 *ta-li-a* (AKT 1, 59e: 3; AKT 1, 59t: 13; AKT 10, 26a: 15; AKT 10, 26b: 3; AKT 10, 47a: 2; AKT 10, 47b: 3, 7; AKT 10, 50a: 11; AKT 10, 57a: 2, 7 ([t]a-); AKT 10, 57b: 5, 7, 11; ATHE 6e: 2 ([ta-l]i-), 7 ([ta-l]i-); ATHE 6t: 4 ([t]a-); BIN 4, 195: 3; C7 Landsberger: 29; CCT 1, 32c: 11; CCT 1, 34a: 21; CCT 5, 25: 19; ICK 1, 3: 25; ICK 1, 93: 5; ICK 1, 181: 27; ICK 4, I 541: 3; KUG 26: 12; RA 59, p. 22 nr. 2: 13; TCL 1, 242: 7, 11, 20; VS 26, 125: 13; kt c/k 500: 3, 7; kt c/k 1639b: 23; kt c/k 1641: 2, 9, 16, 24; kt f/k 62: 13; kt f/k 120: 12; kt n/k 74: 8, 14 (-li[-a]); kt n/k 76: 2; kt o/k 40: 3, 7; kt s/t 92 [1b]: 8; kt v/k 28: 22; kt 88/k 1050: 17). Other attestations of “Talia” are cited by OAPD for the unpublished texts Brussel 2, kt 86/k 152a–b, kt 93/k 672, kt 93/k 733, and kt 94/k 137. Note that Bilgiç & Günbattu (1995: 187) cite a name “*Ta-le-e-a*” (= *ta-li-e-a*) for AKT 3, 111: 6. However, since the clause in which this name occurs (“(4) 1/2² TÚG (5) <a-na> *Ta-le-e-a* né-ša-im” ‘a half(?) cloth <to> Talēa from Neša’) is rather different from the other clauses in this business letter (which almost all have the structure “1 TÚG *a-na* X DUMU Y” ‘one cloth to X, son of Y’), and since it contains some aberrancies (“1/2” is apparently not clear, “*a-na*” is missing), I am hesitant to take this form seriously.

906 Cf. Del Monte & Tischler 1978: 389.

907 Thus Derksen 2014: 198.

908 Cited as “*Tamnašu*” by Bilgiç 1945–1951: 3¹¹ for “Unv. B 29, 4”.

909 *ta-am-na-ni-kà* (kt v/k 147a: 7; kt v/k 147b: 12). Cf. Donbaz 1989: 83.

910 *tám-na* (ICK 1, 15: 4), *ta-am-na-a* (AKT 10, 54a: 9).

911 Acc.sg. ^m*dam-na-aš-šu-un* (KBo 3.38 rev. 4), broken *dam-na*[-...] (StBoTB 4.5, 26).

Hittitoid character of the element *tamna-*. According to Zehnder (2010: 282), the Kanišite name *tamnašar* (g.u.)⁹¹² should be connected as well, which he analyses as consisting of *tamna-* and an element *-šar*, which he proposes to equate with the feminizing element *-šar* as found in *-ḫšušar* (vs. masculine *-ḫšu*). This would mean that *tamnašar* can be viewed “als ein weibliches Pendant zu kapp. ^(m)*Tamna*”. Unfortunately, on the basis of the context in which *tamnašar* occurs (this person is only mentioned as a witness), his/her gender cannot be determined, so that this analysis cannot be ascertained. This does not necessarily undermine Zehnder’s intriguing proposal to equate *tamnašar* with the Hittite lexeme ^(d)*damnaššareš* “das eine Art Götterstatuetten in Tiergestalt, möglicherweise auch die Tiere selbst bezeichnet” (Zehnder 2010: 283, with reference to Tischler HEG III: 85–6, but see already Goetze 1954a: 367 for a connection between *tamna-* and Hitt. *damnaššara-*).⁹¹³ According to Zehnder, the pair *tamna* / *tamnašar* would then represent the original male / female pair of the animal, which were used as theriophoric personal names.

5.3.146 *tar(a)-*

This element is only found in the name *tarḫšu* (g.u.),⁹¹⁴ which is attested on a single tablet only. Formally, there are several Hittite lexemes that may be connected to it, viz. *tarra-tta(ri)* ‘to be able’, ^{GIŠ}*tarra-* ‘a kind of tree’, and *ter-zi* / *tar-* ‘to speak’. Semantically, *tarra-* ‘to be able’ could perhaps make sense as an onomastic element, but it is not self-evident.

5.3.147 *tarḫ(u)(a)-*

An element *tarḫu(a)-* is present in *tarḫuala* (m.),⁹¹⁵ *tarḫuan* (m.)⁹¹⁶ and *tarḫula* (g.u.).⁹¹⁷ There are several other names starting in *tarḫu-*, namely *tarḫunia* (*tár-ḫu-ni-a* (ATHE 75: 2)), *tarḫunu* (*ta-ar-ḫu-nu* (AKT 1, 15: 22; AKT 7a, 155: 3, 6; BIN 4, 195: 4; KTK 96: 3; kt c/k 361: 9; kt c/k 797: 3)), and *tarḫušit* (*tár-ḫu-ši-it* (kt k/k

912 *ta-am-na-ša-ar* (KKS 31a: 19), *ta-am-na-šar* (KKS 31b: 4).

913 According to Melchert 2002, *damnaššara-* should rather be translated ‘domestic, of the household’, although he must admit (2002: 157) that not all attestations of this word fit this meaning. It therefore is not a better translation than Zehnder’s / Tischler’s one. Melchert explicitly speaks against viewing the suffix *-ššara-* in *damnaššara-* as marking the feminine gender, but rather views it as an adjectival suffix as can be seen in *šakuḫaššara-* ‘whole, perfect’. See Kloekhorst 2014: 81²⁷⁹, however, where I argue that the feminizing suffix *-ššara-* and the adjectival suffix *-ššara-* are probably identical.

914 *ta-ra-aḫ-šu* (kt 91/k 283: 14).

915 *tár-ḫu-a-lá* (AKT 10, 40a: 3; AKT 10, 40b: 3, 13; TC 3, 254: 2), *ta-ar-ḫu-a-lá* (AKT 6b, 406: 25; TC3, 252: 2).

916 *tár-ḫu-a-an* (KTP 43 [1b]: 3).

917 *tár-ḫu-lá* (ATHE 75: 4, 11), *ta-ar-ḫu-lá* (KKS 21a: 25).

1 [Ib]: 4)). Since their latter parts do not occur with other Hittitoid initial elements, I will leave these names out of consideration.

As was argued in § 3.2.7, the names *tarḫuala* and *tarḫula* may represent a single underlying form with the cluster /-rh^wl-/. The spelling *tarḫuala* would then represent the pronunciation [-rh^wl-], and *tarḫula* the pronunciation [-rh^wəl-]. Moreover, we may equate them with the spelling *tarḫala* (m.),⁹¹⁸ which would represent [-rh^wl-] as well, but without spelling the labialization of the /h^w/. In addition, it was hesitatingly suggested that perhaps also the spelling *turḫala* (m.)⁹¹⁹ belongs here, which may go for *tuarḫala* (g.u.)⁹²⁰ as well. These two can be regarded as representing a single underlying phonological form /t^wrh(a)la/, if we assume that *tuarḫala* spells the pronunciation [t^wrh-], and *turḫala* represents [t^wərh-]. Since /t^wrh(a)la/ is so close to *tarḫuala* / *tarḫula* / *tarḫala*, we may view it as a mishearing of the name represented by these latter spellings. If correct, it implies that the first *a* of *tarḫuala* / *tarḫula* / *tarḫala* is a dead vowel (otherwise *turḫala* cannot be explained) and that the underlying form is /trh^wla/ (which probably was accented /trh^wlá/). If *tarḫuala* / *tarḫula* / *tarḫala* indeed represent an underlying /trh^wlá/, we may assume that *tarḫuan* represents an underlying /trh^wán/.

It was already Bilgiç (1945–1951: 3) who equated the element *tarḫu-* of *tarḫuala* with the element *tarḫu-* as found in the name of the Luwian storm-god ^d*tarḫu(ua)nt-*.⁹²¹ Moreover, the Kanišite name *tarḫuan* may according to Bilgiç (1945–1951: 4) have ended in /-and/, and thus could be a direct formal match with Luw. ^d*tarḫu(ua)nt-*. However, as we have seen in section 4.4, there is hardly any good evidence for Luwic names in the Kanišite material, so a Luwic interpretation of *tarḫuala* / *tarḫula* / *tarḫala* and *tarḫuan* is not self-evident.

It is therefore better to look at the Hittite cognate of Luw. ^d*tarḫu(ua)nt-*, namely Hitt. *tarḫu*^{-zi} / *taruḫḫ*^{-zi} ‘to conquer’, which contains a root /tarh^w:-/ < PIE ^{*}*terh₂u-*.⁹²² The Kanišite name *tarḫuala* / *tarḫula* / *tarḫala* may then reflect /trh^w:lá/ and mean something like ‘conqueror’. And the name *tarḫuan* can then formally be equated with the Hitt. participle *tarḫuuant-* / *taruḫḫant-* ‘conquered’. Semantically, the latter connection may at first sight seem odd: a meaning ‘conquered (one)’ is not very attractive for a personal name. However, since some Hittite participles in *-ant-* can have both a passive and an active meaning (e.g. *adant-* ‘eaten; having eaten’), it can be assumed that this originally was the

918 *ta-ar-ḫa-lá* (AKT 10, 58a: 5; AKT 10, 58b: 5 (-[lá]), 8 ([ta]-ar-ḫ[a- ...])).

919 Cited as “Turhala” by OAPD for the unpublished text kt 94/k 804.

920 *tù-ar-ḫa-lá* (kt f/k 61 [Ib]: 16).

921 Cf. Van Gessel 1998: 446.

922 Cf. Kloekhorst 2008: 835–9.

case for all participles. This would imply that *tarḫuuant-* / *taruḫḫant-* originally not only meant ‘conquered’ but ‘having conquered’ as well (which undoubtedly was the original meaning of Luw. ^d*tarḫu(ua)nt-* ‘storm-god’, too).⁹²³ Such a meaning would excellently fit a personal name, and we may therefore assume that Kanišite *tarḫuan* represents /trh^w:ánd-/ ‘the one who has conquered’.

5.3.148 *tarḫut-* / *tarḫud-*

This element is only found in the name *tarḫutašu* (m.), which is attested several times spelled *ta-ar-ḫu-ta-šu*,⁹²⁴ but also once *tár-ḫu-da-šu*.⁹²⁵ Although in the latter part of this name the Hittitoid element *-ašu* can be recognized, its initial part *tarḫut-* / *tarḫud-* is not found with any other Hittitoid element. Nevertheless, since it is reminiscent of the Kanišite name *tarḫuan*, which in the preceding paragraph was analysed as Hittitoid /trh^w:ánd-/ ‘the one who has conquered’, we may assume that *tarḫut-* / *tarḫud-* is Hittitoid, too. The only difference is that *tarḫuan* /trh^w:ánd-/ has an *a* that is absent in *tarḫut-* / *tarḫud-*. To my mind, we may assume that this is a matter of ablaut, which means that *tarḫutašu* / *tarḫudašu* can be analysed as /trh^w:nd-ás:u/ ‘beloved by the one who has conquered’.

It must be admitted that formally and semantically one may also think of a connection with the Luwian name of the storm-god, ^d*tarḫu(ua)nt-*,⁹²⁶ since this would yield a meaning ‘beloved by the storm-god’, which is certainly attractive for a personal name.⁹²⁷ However, ^d*tarḫu(ua)nt-* is the specifically Luwian name of the storm-god (cognate with Lyc. *trqḡnt-* ‘storm-god’), which probably differs from the Hittite one: although it is never spelled out completely phonetically, on the basis of sumerographic spellings like gen.sg. [^dI]šKUR-un-na-aš (KUB 20.43, 4) and dat.sg. ^dIšKUR-un-ni (e.g. KBo 3.22 obv. 2, 3, 21), we must assume that the Hittite name of the storm-god ended in *-unn(a)-*. As we have seen in section 4.4, there is hardly any good evidence for Luwic names in the Kanišite material. Moreover, the element *-ašu* is clearly Hittitoid, so interpreting *tarḫut-* / *tarḫud-* as Luwian ^d*tarḫu(ua)nt-* would yield a linguistically hybrid name, for which we have no good parallels. One way to bypass this problem is to assume that the original Hittite name for the storm-god was ^d*tarḫu(ua)nt-*, as well. Since Hittite possesses the participle *tarḫuuant-* / *taruḫḫant-* ‘conquered;

923 Compare also its Skt. cognate *tūrvant-* ‘overpowering’, which is used as an epithet of the deities Indra, Agni and Mitra (Eichner 1974: 28; Kloekhorst 2008: 838).

924 *ta-ar-hu-ta-šu* (AKT 10, 21a: 6; AKT 10, 21b: 6, 13; AKT 10, 35a: 5; AKT 10, 35b: 6, 14).

925 *tár-ḫu-da-šu* (kt 73/k 14 [1b]: 15).

926 Cf. Van Gessel 1998: 446.

927 In Hittite texts, other personal names can be found that have an initial element *tarḫu(ua)nt-*, that refers to the storm-god, like ^m*tarḫundaradu* and ^m*tarḫundaziti* (cf. Laroche 1966: 177). All these names are clearly Luwian, however, not Hittite.

*‘having conquered’ from which the name of the Luwian storm-god must have been derived (cf. also the preceding lemma), this does not seem impossible to me.

A phonological problem to both interpretations is the fact that *tarḫutašu* / *tarḫudašu* shows in the majority of its attestations a spelling with the sign TA (6x *ta-ar-hu-ta-šu*, in two distinct texts) instead of with DA (1x *tár-hu-da-šu*). In other Kanišite names, however, the dental stop that corresponds to a Hittite nasal cluster *-nt-* is in principle always spelled with the sign DA (e.g. *ḫu-ma-da-šu*, *ša-da-aḫ-šu(-šar)*, etc.), pointing to a cluster *[-nd-]*. However, since the number of attestations of *tarḫutašu* / *tarḫudašu* is relatively low, we may ascribe the preponderance of TA as due to chance.

5.3.149 *tarku(a)-*

This element is only found in the name *tarkuala* (g.u.),⁹²⁸ which is attested only once. Formally, there are two Hittite lexemes that could match it, namely *tar(k)u-zi* ‘to dance’, and *tarkuuant-* ‘looking angrily’. Of these two, ‘to dance’ has semantically more merit than ‘looking angrily’, but is still not a self-evident candidate for an onomastic element.

5.3.150 *tiliur(a)-* / *tiliwar(a)-*

This element is only found in the name *tiliuruman* / *tiliwaruman* (m.).⁹²⁹ It was already Goetze (1931: 260–1) who equated it with the toponym ^{URU}*tiliura-* / ^{URU}*tiliyara-* as attested in Hittite texts.⁹³⁰ We therefore can analyse *tiliuruman* / *tiliwaruman* as */tiliwromán/* ‘coming from Tiliura’.

5.3.151 *tipu-*

This element is found in the names *tipukunian* (f.),⁹³¹ *tipula* (m.)⁹³² and *tipulka* (f.).⁹³³ It was Bilgiç (1945–1951: 6), who first connected it with Hittite *tēpu-* ‘small, little’, which is followed by Laroche (1966: 310) and Kronasser (1966: 129, with question marks).⁹³⁴ This is indeed an attractive connection, both formally (cf. § 3.1.3 for the fact that OAss. *i* can denote */e/*, too) and

928 *ta-ar-ku-a-lá* (kt 89/k 294: 16).

929 *tí(?) -li-ú-ru-ma-an* (KTS 1, 51b: 12), *tí-li-wa-ru-ma-an* (AKT 10, 43a: 3 (*tí-li-wa-ru-m[a-...]*); AKT 10 43b: 5 (*[...] -ma-an*)).

930 Cf. Del Monte & Tischler 1978: 421.

931 *tí-pu-ku-ni-a-an* (KTP 43 [1b]: 2).

932 *tí-pu-lá* (AKT 6c, 647: 24; BIN 4, 209e: 2; BIN 4, 209t: 19; kt t/k 32: 5; kt 88/k 1003: 6, 10, 15).

933 *tí-pu-ul-ká* (kt c/k 1637: 4, 6, 13; kt f/k 96 [1b]: 10).

934 It is apparently not followed by Zehnder (2010: 290), who instead argues that *tipukunian* cannot be a Hittitoid name, since he thinks that *-kunian* is not Hittitoid. See the discussion in § 5.2.8.

semantically. We may therefore assume that these names can be interpreted as follows: *tipukunian* = /tepuk^wn:ian/ ‘little lady(?)’; *tipula* = /tepulá/ ‘little one(?)’; *tipulka* = /tepulk:á/ ‘little-bright(?) one’.

5.3.152 *titipiu-*

This element is only found in the name *titipiulka* (f.),⁹³⁵ which is attested only once. I know of no good Hittite comparandum for it.

5.3.153 *tizar(a)-*

This element is only found in the name *tizaruman* (g.u.),⁹³⁶ which is attested in one text only. I know of no good Hittite comparandum for it.

5.3.154 *tuar(a)-*

This element is only found in the name *tuarahšu* (g.u.),⁹³⁷ which is attested in one text only. I know of no good Hittite comparandum for it.

5.3.155 *tupizia-*

This element is only found in the name *tupizialka* (f.),⁹³⁸ which is attested in one text only, but may also be present in the men's name *tupizi* (m.).⁹³⁹ As Zehnder (2010: 296) notes, it is formally identical to the Hittite adjective *tupezzi(ia)-*, which is attested only once, describing a well.⁹⁴⁰ The semantics of *tupezzi(ia)-* cannot be established, but according to Tischler (HEG III: 453), “könnte [man] an ein von *suppi-* ‘(kultisch) rein’ semantisch leicht verschiedenes Adjektiv denken”, which would certainly be a good meaning for an onomastic element. However, as Tischler states, “auch eine Bedeutung wie ‘unrein, unsauber, schmutzig’ wäre für eine ‘Quelle’ möglich”, whereas Zehnder adds that “natürlich hundert andere Eigenschaften für eine Quelle in Frage [kommen], z. B. viele Farben”. In Zehnder's view, an etymological connection with PIE **d^heub-* may rather point to a meaning ‘deep’.

935 *tí-tí-pi-ul-kà* (kt f/k 96 [1b]: 10).

936 *tí-za-ru-ma-an* (AKT 6c, 714: 4).

937 *tù-wa-ra-a-aḫ-šu* (AKT 6c, 715: 4).

938 *tù-pi-zi-al-kà* (AKT 10, 7a: 7–8; kt 88/k 1087: 6, 12; kt 89/k 358: 4 (cf. Donbaz 1996: 192f.)), *tù-pi-zi-al-kà* (AKT 10, 7b: 11).

939 *tù-pi-zi* (ICK 1, 129: 18; TC 2, 14: 36; VS 26, 8: 19).

940 KBo 12.3 ii' (6) *tu-pé-ez-zi ıa-at-ta-ru-i tu-x[...]* ‘in a *tupezzi(ia)-* well....’ E.g. Tischler (HEG III: 453) cites this adjective as *tupizzi(ia)-*, but I find a reading *tupezzi(ia)-* more likely, since an adjectival suffix *-ezzi(ia)-* is well established in Hittite (*appezz(ia)-* ‘backmost’, *hantezzi(ia)-* ‘foremost’, *šan(i)ezzi(ia)-* ‘excellent’).

We may therefore conclude that although the connection to Hittite *tupezzi(ia)-* does give information on the phonological interpretation of *tupizialka*, namely /tupetsialk:á/, its semantic interpretation remains unclear.

5.3.156 *ulili(a)-*

This element is only found in the name *uliliuman* (g.u.),⁹⁴¹ which is attested only once. Formally, it may be compared to Hittite *ulili-* ‘green; greenery’⁹⁴² (with derivative *uliliḫe/a-zi* ‘to blossom, to grow(?)’), which semantically makes sense as well: *uliliuman* /uliliomán/ would then mean ‘coming from the greenery’.

5.3.157 *ulim(a)-*

This element is only found in the name *ulimahšu* (g.u.),⁹⁴³ which is attested in one text only. I know of no good Hittite comparandum for it.

5.3.158 *upati(a)-*

This element is only found in the name *upatiaḫšu* (m.),⁹⁴⁴ which is attested only once. It is Laroche (1966: 298) who is the first to connect it to the Hittite noun *ubāti-* ‘territory; estates’.⁹⁴⁵ We may therefore interpret *upatiaḫšu* as /ubātiáhsu/ ‘born at(?) the estates’.

941 *ú-li-li-ú-ma-an* (kt n/k 842: 10).

942 Tischler HH: 185 translates “Grün, Pflanzenwuchs; Feld”. The meaning “Feld” may be based on Puhvel’s treatment (HED 4: 174) of the following passage. In the Akkadian-Hittite bilingual KUB 4.4, we find that the Akkadian sentence i (10a) *ša-[a]m-mu še-e-ri* (11a) *a-na ku-ru-um-ma-at* (12a) *bu-li ta-bá-an-ni* ‘you make grass of the field for beasts to feed’ is translated by the Hittite sentence i (10b) *ú-li-li-ja-aš-ma* (11b) *ki-ik-lq²-an* *líl-aš ḫ[u-it-na-aš]* (12b) *a-da-an-na e-eš-ša[-at-ti]*. According to Puhvel, *líl-aš ḫ[uitnaš]* corresponds to Akk. *buli* ‘beasts’, which would leave *ulilijaš kiklan* to mean ‘grass of the field’, with *ulili-* = ‘field’. I do not find this very likely: *líl-aš* clearly means ‘of the field’, and *ḫ[uitnaš]* alone would be enough to translate Akk. *buli* ‘beasts’ (moreover, why would one want to feed ‘beasts of the field’?). So I would rather assume that Hitt. *ulilijaš kiklan* *líl-aš* corresponds to Akk. *šammu šēri* ‘grass of the field’, which means that *ulilijaš kiklan* = ‘grass’. Although the meaning of *kiklan* is not fully clear (it is a *hapax legomenon*), there is no need for *ulilijaš* to translate anything else than ‘greenery’ or the like.

943 Cited as “Ulimahšu” by OAPD for the unpublished text kt 89/k 294.

944 *ú-pá-tí-a-aḫ-šu* (TC 3, 191: 17).

945 The fact that in Old Hittite this word is spelled *ú-ba(-a)-ti-*, with the sign BA (which is rare in Hittite), indicates that this word contains a /b/ and therefore must be a loanword. It is generally assumed that Hittite borrowed *ubāti-* from Luwian, cf. HLuwian *upatit-* ‘territory’ (Kloekhorst 2008: 922–3; Tischler HEG IV: 79–83). The Kanišite element cannot be taken from Luwian directly, however, since in Luwian the word ended in *-it-*, not in *-i-*.

5.3.159 *upui(a)-*

This element is only found in the name *upuiuman* (g.u.),⁹⁴⁶ which is attested on one pair of tablet and envelope only. Note that it shows a remarkable plene spelling of the second *u*, *ú-pu-ú-i-*, which may be phonologically relevant (*upu'uiuman?*). I know of no good Hittite comparandum for it, however.

5.3.160 *uran(a)-*

This element is only found in the name *uranuman* (m.),⁹⁴⁷ which occurs only once. Formally, one could compare it to Hittite *uranae-^{zi}* ‘to bring a fire-offering’. However, this verb is probably not linguistically real,⁹⁴⁸ and I therefore think we should keep it apart.

5.3.161 *ušman(a)-*

This element only occurs in the name *ušmanaḥšu* (g.u.),⁹⁴⁹ which is attested only once. I know of no good Hittite comparandum.

Note that in principle it is possible to equate *ušman(a)-* with the element *w(a)š(i)n(a)-*, if we assume that the former represents /wsmn(a)-/, which, through assimilation of *-mn-* > *-n-*, sometimes develops into /wsn:(a)-/ (cf. *ḥaršumn(a)-* > *ḥaršun(a)-* before the element *-uman*).

5.3.162 *ušn(a)-*

See *w(a)š(i)n(a)-*.

5.3.163 *ušt(a)-*

This element is found in the names *uštahšušar* (f.)⁹⁵⁰ and *uštala* (g.u.).⁹⁵¹ Formally, it could be compared to Hittite *ušta-ⁱ* / *ušt-* ‘to sin, to offend’ (cf. the derivative *uštul* ‘sin offense’, whose older shape *uštul* shows that the verb once must have contained a weak stem *ušt-*), but semantically this is less attractive: ‘sin, offense’ is not a meaning one would expect for an onomastic element.

946 *ú-pu-ú-i-ú-ma-an* (ICK 4, I 579: 16; ICK 2, 10: 1 ([*ú-p*]u-ú-i-<ú->ma-an)). Note that ICK 2, 10 is the envelope to ICK 4, I 579, which justifies the restoration [*ú-p*]u-ú-i-<ú->ma-an.

947 *ú-ra-nu-ma-an* (AKT 10, 42b: 2).

948 Hitt. *uranae-^{zi}* is attested twice in a single text, and both attestations are marked with gloss wedges: 3sg.pres.act. *ú-ra-na-ez-zi* (KBo 23.112, 4), verb.noun *ú-ra-na-u-ya-ar*. As argued in Kloekhorst 2008: 926, the use of the gloss wedges may indicate that these are *ad hoc*-formations, which I now think were probably created on the basis of the 3sg. form *urāni* ‘it burns’. The verb *uranae-* cannot therefore be used to postulate the presence of an underlying noun **urana-*.

949 *uš-ma-na-aḥ-šu* (kt n/k 1414: 20).

950 Cited as “Uštahšušar” by OAPD for the unpublished texts kt 94/k 1453 and kt 94/k 1343.

951 *uš-ta-lá* (AKT 4, 46: 7; ICK 4, I 470: 19; ICK 4, I 569: 21; TC 3, 107: 14; TPAK 1, 58: 10).

5.3.164 *ušušn(a)*-

This element is only found in the name *ušušnuman* (g.u.),⁹⁵² which is attested in one text only. I know of no good Hittite comparandum for it.

5.3.165 *utni(a)*-

See *w(a)tni(a)*-.

5.3.166 *utun(a)*-

This element is only found in the name *utunuman* (g.u.),⁹⁵³ which is attested only once. I know of no good Hittite comparandum for it.

5.3.167 *wa'an(a)*-

This element is only found in the name *wa'anaḫšu* (m.).⁹⁵⁴ It is remarkable that in all its attestations we find plene spelling with the sign A: *wa-a-na-aḫ-šu*. According to the orthographic rules of Old Assyrian, such a plene spelling may indicate the presence of a weak consonant, namely *ʔ*, *w*, or *y* (Kouwenberg 2017: 70f.). However, reading *waʔan(a)*-, *wawan(a)*- or *wayan(a)*- does not yield meaningful elements.

Alternatively, as Donbaz (1988: 48) argued, we may read the first sign not as *wa*, but as *wi* (note that the sign PE/I can be read *wa*, *we*, *wi*, and *wu*), yielding *wi-a-na-*, which would make it possible to compare this element to Hittite *uījana*- 'wine'.⁹⁵⁵ However, an analysis /wianáhsu/ 'wine-born' does not seem very compelling semantically.

5.3.168 *wal(a)*-

This element may be found in the name *walahšu* (g.u.), if the damaged name in ICK 1, 123: 19 can indeed be read as *wa-lq[-a]ḫ-šu* (thus Hecker aATU, CDLI; cf. the hand copy: ).

Formally, *wal(a)*- could be compared with Hittite ^(UZU)*ualla*- 'thigh(-bone) (?)' and *ualla/i*- 'to praise, to honour'. Semantically, the latter option could make sense: *walahšu* = /wal:áhsu/ 'born as praise (vel sim.)'. However, since the attestation of this name is uncertain, this remains very speculative.

952 *ú-šu-uš-nu-ma-an* (kt 91/k 183t: 10 (courtesy K.R. Veenhof)).

953 *ú-tù-nu-ma-an* (kt v/k 28: 4).

954 *wa-a-na-aḫ-šu* (AKT 10, 17b: 2; AKT 10, 58a: 3; AKT 10, 58b: 4 (-[*šu*]); kt n/k 71: 6).

955 Thus also Zehnder (2010: 73).

5.3.169 *wania-*

This element is found in the name *waniaalka* (f.),⁹⁵⁶ and may be related to the name *wani* or *wani'i* (f.).⁹⁵⁷ I know of no good Hittite comparandum for it (likewise Zehnder 2010: 303).

5.3.170 *wašḫania-*

This element is only found in the name *wašḫaniuman* (m.).⁹⁵⁸ It is clearly related to the toponym ^{URU}*uašḫaniija-*, which is attested both in Old Assyrian and in Hittite texts.⁹⁵⁹ The name *wašḫaniuman* can therefore be interpreted as /washaniomán/ 'coming from Uašḫaniija'.

5.3.171 *w(a)š(i)n-*

An element *ušin(a)-* is found in the name *ušinuman* (g.u.).⁹⁶⁰ As argued in § 3.2.1, we may equate *ušinuman* with the name *wašinuman* (m.),⁹⁶¹ which implies that we have to assume an underlying form /wsinuman/. Moreover, it was argued in § 3.2.2, that this means we may assume that *w(a)šinuman* is in fact identical to the name *ušnuman* (m.),⁹⁶² if we assume that the *i* in *w(a)šinuman* is an epenthetic vowel in the initial cluster /wsn-/. In this way, we can analyse all these names as representing /wsnomán/, which could be pronounced [wsnomán], spelled *ušnuman*, and [wsənomán], spelled *ušinuman* as well as *wašinuman*.

Formally, one may compare *w(a)š(i)n(a)-* to Hittite *uš(ša)nije/a-^{zi}* 'to put up for sale', derived from a noun **us-n-* 'price' (cf. Kloekhorst 2008: 930–1). Semantically, this is not self-evident, however.

Note that in principle it is possible to equate the element *w(a)š(i)n(a)-* with the element *ušman(a)-*, if we assume that the latter represents /wsmn(a)-/, which, through assimilation of *-mn-* > *-n-*, has developed into /wsn:(a)-/ (cf. *ḫaršumn(a)-* > *ḫaršun(a)-* before the element *-uman*). However, this does not help in finding a comparandum from Hittite.

956 *wa-ni-a-al-kà* (kt 88/k 1003: 3, 12).

957 *wa-ni-i* (kt k/k 14a [1b]: 7; kt k/k 14b [1b]: 5). Note that Yakubovich (2010: 217–8) proposes to interpret *wani* as Luwic, cf. section 4.4.

958 *wa-āš-ḫa-ni-ú-ma-an* (AKT 9a, 2: 12 (*-ma^l-*); AKT 9a, 4: 29; AKT 9a, 7: 22, 29 (*-an*); AKT 9a, 14: 5; AKT 9a, 24: 18; AKT 9a, 30: 9).

959 Nashef 1991: 136–7; Del Monte & Tischler 1978: 477–8.

960 *ú-ší-nu-ma-an* (BIN 6, 222: 7).

961 *wa-ší-nu-ma-an* (Kayseri 4369: 23; OIP 27, 27: 2; kt 89/k 370 [1b]: 4 (*-m[a-an]*)).

962 *uš-nu-ma-an* (AKT 10, 57a: 16; AKT 10, 57b: 2 (*-[n]u-*); VS 26, 100: 3, 6, 15).

5.3.172 *wašuhur(a)-*

This element is only found in the name *wašuhuruman* (m.),⁹⁶³ which occurs on a single pair of tablet and envelope only. I know of no good Hittite comparandum for it.

5.3.173 *w(a)tni-*

This element is found in the names *utniahšu* / *watniahšu* (g.u.)⁹⁶⁴ and *watniašue* (f.).⁹⁶⁵ The alternation in spelling between *utni(a)-* and *watni(a)-* points to an underlying /wtni(a)-/. It was Bilgiç (1945–1951: 17) who convincingly connects this element to Hittite *utnē* / *utni-* ‘land’.⁹⁶⁶ This means that we can assume the following meanings: *utniahšu* / *watniahšu* = /wtniáhsu/ ‘land-born’; *watniašue* /wtniás:ue/ ‘beloved by the land’.

The element *watni-* also seems to occur in the name *watništuan*, which will be treated in § 6.1.8.

5.3.174 *watru(a)-*

This element is only found in the name *watruanika* (f.),⁹⁶⁷ which is attested only once. Formally, it resembles the Hittite noun *uat(ta)ru-* ‘source, well’, but semantically, this does not seem self-evident: would *watruanika* then mean ‘well’s sister’ or ‘sister from the well’?

5.3.175 *wian(a)-*

See *wa’an(a)-*.

963 *wa-šu-hu-ru-ma-an* (AKT 10, 49a: 2; AKT 10, 49b: 6).

964 *ut-ni-aḫ-šu* (EL 7: 16), *wa-at-ni-aḫ-šu* (AKT 1, 79: 14), *wa-at-ni-a-aḫ-šu* (kt 87/k 267: 3 (courtesy K. Hecker)). Another attestation of “Utniahšu” is cited by OAPD for the unpublished text kt 93/k 941a–b.

965 *wa-at-ni-áš-w[e]* (TPAK 1, 105: 5), *wa-at-ni-a-šu-e* (kt 88/k 970: 4 (<ni-a>); 52, 64, 67, 70), *wa-at-ni-a-šu-ú-e* (kt 88/k 970: 1). According to Dercksen (2014: 199), this name is attested on kt c/k 18: 9 as *wa-at-ni-a-ši* (cf. also Dercksen 2015: 38), which then may be better read *wa-at-ni-a-še*. The absence of *w* may be due to the tendency of Old Assyrian to drop *w* in this position (cf. Kouwenberg 2017: 76). Note that in his edition of kt 88/k 970, Donbaz (2008a) reads this name as “Walaliašu’e” (*wa-la-lí-a-šu(-ú)-e*). In kt 03/k 257, we come across the name *utnišue* (f.) (*ut-ni-šu-e* (kt 03/k 257a [1b]: 6, 9 ([...]-šu-e) (Günbatti 2014, nr. 2); kt 03/k 257b [1b]: 2 (Günbatti 2014, nr. 3)), of which I am inclined to believe that it should represent *utniašue*. I do not know how to explain the absence of the *-a-*, however.

966 Thus also Landsberger 1954: 123 (“*Utne-aḫšu* ‘Landessohn’”), Laroche (1966: 298).

967 *wa-at-ru-wa-ni-kà* (kt 01/k 294 [1b]: 4 (Günbatti 2014, nr. 1)).

5.3.176 *zaḥud(a)-*

This element only occurs in the name *zaḥudaḥšu* (m.),⁹⁶⁸ which is attested on a single pair of tablet and envelope only. I know of no Hittite comparandum for it.

5.3.177 *zarz(a)-*

This element is only found in the name *zarzaḥšu* (m.),⁹⁶⁹ which is attested only once. It may be identical to the independent name *zarza* (g.u.).⁹⁷⁰ I know of no good Hittite comparandum for it.

5.3.178 *zilan(a)-*

This element is only found in the name *zilanaḥšušar* (f.),⁹⁷¹ which is attested in one text only. Formally, it resembles Hittite *zilan* ‘from this side’ (also attested as *zilaḡan*), a term used in bird oracles. Semantically, however, this connection is not very attractive. Dercksen (2014: 198) connects *zilan(a)-* to the toponym URU*ziluna*,⁹⁷² but the presence of *u* in the latter vs. absence of *u* in the former does not make this comparison very attractive.

5.3.179 *zupana-*

This element is only found in the name *zupanuman* (m.),⁹⁷³ which is attested only once. It can be connected to the toponym *zupana* as attested in Old Assyrian texts.⁹⁷⁴ This means that *zupanuman* can be interpreted as /tsupanomán/ ‘coming from Zupana’.

5.4 Summary: an Overview of Elements

In the table on the following pages, an overview is given of which elements combine with which elements in the compound names that have been treated above. As we have seen, some elements that occur as the initial part of compound names also occur independently. These are cited in the table as having a final element “-Ø” (i.e. *zero*). This table contains in total 263 compound names that can be regarded as assuredly Hittite. For the 71 names that are possibly

968 *za-ḥu-da-aḥ-šu* (KKS 31a: 5; KKS 31b: 3, 11).

969 *za-ar-za-aḥ-šu* (kt v/k 152: 6).

970 Cited as “Zarza” by OAPD for the unpublished text kt 94/k 308.

971 *zi-lá-na-aḥ-šu-šar* (kt o/k 90: 2, 17 (cf. Öz & Albayrak 2005: 24–5)).

972 Cf. Del Monte & Tischler 1978: 502.

973 *zu-pá-nu-ma-an* (kt o/k 46: 1).

974 Cf. Nashef 1991: 141.

[illegible]

Other Kanišite Hittite Names

Although the compound names as treated in Chapter 5 form the vast majority of the Hittitoid names that can be identified in the Old Assyrian texts from Kaniš (263 assured ones, and 71 possible ones), there are also several other names that look Hittitoid but cannot be interpreted as compounds. These will be treated in this chapter. It must be admitted that the majority of these end in *-and/*, which in § 5.2.3 has been identified as the final element of several compound names. The reason that here they are not interpreted as compound names, however, is that their initial part does not occur with any of the other Hittitoid final elements.

Since the names in the present chapter cannot be linked to the complex of compound names as treated in the preceding chapter (the Hittitoid character of which can hardly be doubted), their identification as Hittitoid must be regarded as less secured. Nevertheless, there are quite a few of these names (eight in total) for which it seems fair to state that their Hittitoid character is relatively certain.

6.1 Relatively Certain Cases

6.1.1 *ašiet / ašiat* (m.)

See section 7.1 for an extensive treatment of this name.

6.1.2 *a/ištalkian* (m.)⁹⁷⁵

Although this name ends in *-an*, and it therefore could in principle be interpreted as one of the compound names, its initial element *a/ištalki(a)-* is not found in any other name, so I have chosen to treat it as a unitary name. The two spellings of this name, *ištalkian* and *aštalkian* point to an underlying form starting in */st-/*.⁹⁷⁶ Already Alp (1950: 133¹²²) connected this name with the Hittite verb *ištalk(īe/a)-^{zi}* ‘to flatten, to level’, and Laroche (1966: 314, 335)

⁹⁷⁵ *a-áš-ta-al-ki-a-an* (kt v/k 152: 1), *iš-ta-al-ki-a-an* (EL 209: 2, 6, 21).

⁹⁷⁶ The function of the initial plene spelling in *a-áš-ta-al-ki-a-an* is unclear to me; cf. also Zehnder 2010: 12.

interprets it as a participle, *ištalkijant-* “nivelé, aplati”,⁹⁷⁷ comparing the French family name *Camus* ‘snub-nosed’.⁹⁷⁸

6.1.3 *ḥaḥaluan* (f.)⁹⁷⁹

Although this name ends in *-an*, I have chosen not to treat it as a compound name, since an initial element *ḥaḥalu(a)-* is further unknown. Nevertheless, this name could well be of a Hittitoid character, since already Laroche (1966: 314) equated it with Hitt. *ḥaḥḥaluyant-*, *ḥaḥlayant-* ‘yellow’ (cf. Puhvel HED 3: 4). Semantically, the name may thus have meant ‘the blonde one’.⁹⁸⁰ Within Hittite, the adjective *ḥaḥḥaluyant-* is analysable as a derivative in *-yant-* of the noun *ḥāḥḥal(l)-* ‘greenery, vegetation’.

6.1.4 *ilališka(n)* (m./f.)⁹⁸¹

Although the initial part of this name, *ilali-*, occurs in several compound names (*ilaliaḥšu*, *ilali(a)lka*, *ilaliuman*), its latter part, *-ška(n)*, is not found with other elements from the Hittitoid compound names, and I have therefore chosen to treat this name not as a compound name (likewise *šaḥiškan*, which will be treated below).

This name occurs both with and without a final *-n*, a situation that is also present in e.g. *kikarša(n)* and *inarawa(n)*. It is unclear to me how to interpret this situation: other names ending in *-an* (like the ones in *-uman*) never show absence of the *n*. Should we therefore assume two different names, *ilališkan* and *ilališka*? Or are the forms spelled *ilališka* faulty spellings for *ilališkan*? In that sense it is telling that in kt 88/k 1087 we come across a man called *ilališka*, who is the husband of a woman called *tupizialka*, whereas in kt 89/k 358 we find a man called *ilališkan*, who is mentioned next to a woman called *tupizialka*. Although it cannot be strictly proven that in the latter text *ilališkan* and

977 To my knowledge, the participle *ištalkijant-* has not yet been attested in Hittite, we only have the form *ištalgant-* (cf. Puhvel HED 1/2: 451; HW² 1: 229).

978 Followed by e.g. Puhvel HED 1/2: 451, Zehnder 2010: 12.

979 *ḥa-ḥa-lu-wa-an* (TC 1, 122 [1b]: obv. 2), *ḥa-ḥa-lu-an* (TC 1, 122 [1b]: obv. 6).

980 Cf. Zehnder 2010: 138. His alternative analysis, namely that “[d]as Namensmotiv in einem Fall von ausgeprägter Neugeborenenengelbsucht (Ikterus) zu suchen sein [könnte]”, seems much less likely to me.

981 *i-lá-li-iš-kà* (ICK 1, 181: 29; kt c/k 183: 15; kt 88/k 1087: 5, 11), *e-lá-li-iš-kà* (TC 2, 76: 18), *i-lá-li-iš-kán* (BIN 6, 236: 5 (*i-lá-li[-...]*); TC 2, 66: 8 (*i-lá-li-i[-š-...]*); TC 3, 240: 4; TC 3, 241: 4 (*i-lá-li-iš-kán*)), *i-lá-li-iš-kà-an* (AKT 10, 29a: 3; AKT 10, 29b: 4, 7 (*-[i-i]š-*); kt e/k 162, 1 (*[...-]lá-li-iš-kà[-...]*); kt e/k 164, 3; kt n/k 39 [1b]: 10 (*i[-...]*), 14 (*i-lá-li-iš[-...]*); kt 89/k 358: 3; kt 88/k 1003, 2, 9). Other attestations of ‘Ilališkan’ are cited by OAPD for the unpublished texts kt 91/k 281, kt 93/k 672, kt 93/k 733, kt 94/k 788, kt 94/k 804.

tupizialka form a pair, it seems attractive to assume that both texts refer to a single couple, and that the names *ilališka* and *ilališkan* are equivalent to each other.

The form *ilališka* has in the past been interpreted as being identical to the name *ilali(a)lka* under the assumption that a dissimilation of *-lka* to *-ška* had taken place (e.g. Goetze 1954a: 353). However, since the names in *-lka* never show a variant with an extra *-n*, it is clear that *ilališka(n)* cannot be identical to *ilali(a)lka*.

As was mentioned in § 5.3.57, Zehnder (2010: 174) convincingly connects *ilališkan* to Hitt. **ilališkant-*,⁹⁸² the participle of the verb *ilališke/a-zi*, itself the imperfective derivative of *ilalije/a-zi* ‘to desire, to want’. He therefore translates the name as “der/die vielerwünschte”. As Zehnder (l.c.) rightly states, the fact that *ilališka(n)* is used as a name both for men and women is an extra argument for this interpretation, since “[d]as *nt*-Partizipium des Hethitischen keine Motion [kennt] und für beide Geschlechter stehen [kann]”.

6.1.5 *inarawa(n) / inarawada (m.)*⁹⁸³

We find the spellings *i-na-ra-wa*, *i-na-ra-wa-an*, but also once *i-na-ra-wa-da*. If *i-na-ra-wa-an* and *i-na-ra-wa-da* can be equated, the name would underlyingly end in */-and-/*, which would fit an equation with Hitt. *in(n)arayant-* ‘strong, vigorous’ (thus e.g. Hecker 1968: 96).⁹⁸⁴ The interpretation of the spelling *i-na-ra-wa*, without a final *-n*, is unclear, but seems to be paralleled by the alternation between *kikaršan* and *kikarša* (cf. § 5.3.70) and between *ilališka* and *ilališkan* (cf. § 6.1.4).

6.1.6 *na/ikiliet / na/ikiliat (m.)*

See section 7.1 for an extensive treatment of this name.

⁹⁸² The fact that the participle *ilališkant-* is as yet unattested in Hittite is surely due to chance.

⁹⁸³ *i-na-ra-wa* (ATHE 17: 13; CCT 3, 40b: 7; CCT 5, 14b: 10; CTMMA 1, 80: 3; ICK 4, I 492: 2; VS 26, 54: 2; kt c/k 197: 39 (*i²-*)), *i-na-ra-wa-an* (AKT 10, 56a: 1; AKT 10, 56b: 5 (*-wa¹-*); kt n/k 39 [1b]: 11, 14 ([*-an*]), 26 ([*-an*]), 38 ([*i-*]); kt n/k 72: 6, 10; kt s/t 92 [1b]: obv. 12; kt 73/k 14 [1b]: 33), *i-na-ra-wa-da* (TMH 1, 26c: 3). Another attestation of “Ennarawa” is cited by OAPD for the unpublished text kt 94/k 763.

⁹⁸⁴ The dental stop in Hitt. *in(n)arayant-* is spelled both with TA (e.g. *in-na-ra-u-ya-an-ta-aš*) and with DA (e.g. *in-na-ra-u-ya-an-da-aš*), so must have been voiced, */-and-/* (cf. Kloekhorst 2013: 131–9), which fits the spelling with the sign DA in the Kanišite form *i-na-ra-wa-da*.

6.1.7 *šaḫiṣkan* (g.u.)⁹⁸⁵

This name ends in *-škan*, just like *ilaliṣkan* ‘much desired (one)’, and it is therefore attractive to interpret *šaḫiṣkan* as Hittitoid, too. Zehnder (2010: 12, 53) attractively equates *šaḫiṣkan* with the Hittite participle in *-ant-* of the imperfective verb *šanḫiṣke/a-^{zi}*, derived from *ša(n)ḫ-* ‘to seek, to look for’.⁹⁸⁶ This would yield for *šaḫiṣkan* the meaning “vielerstrebt”, which Zehnder classifies as an onomastic motif that expresses “Dankbarkeit für die Erfüllung eines Kinderwunschs” (2010: 53).

6.1.8 *watništuan* (m.)⁹⁸⁷

The initial part of this name is clearly reminiscent of the Hittitoid element *w(a)tni(a)-* that is found in the compound names *utniaḫšu* / *watniaḫšu* and *watniašue*. Nevertheless, since an element *-štuan* is not found with any other Hittite element, I have decided to treat *watništuan* not in the chapter on compound names, but rather here.

Since Hittitoid names in *-an* can in principle underlyingly end in */-and-/* (cf. § 5.2.3), the latter part of this name could be */-stuand-/*. It then would be attractive to connect this to the Hittite verb *ištu-^{āri}* ‘to be exposed, to get out in the open; to be announced’, the participle of which would have been **ištuant-* (although unattested in Hittite texts, it undoubtedly must have existed). Note that the initial *i-* in Hitt. *ištu-* is prothetic, and that the preform of the participle was **/stuand-/*. This would yield for *watništuan* */wtni-stuand-/* a meaning ‘announced / famous in the land’.

985 *ša-ḫi-iš-kà-an* (TCL 1, 242: 2).

986 Although in Hittite a form **šanḫiṣkant-* is unattested (cf. its absence in CHD Š:162–3), this is certainly due to chance.

987 *wa-at-ni-iš-tù-a-an* (TC 3, 191: 27), *wa-at-ni-iš₆[?]-tù-an* (CCT 1, 23: 14). Both attestations are cited thus by Bilgiç (1945–1951: 6⁴²).

Note that the form as found in CCT 1, 23: 14 (hand copy: ) has sometimes been read differently. CDLI reads it as *wa-la[?]-tù-an* (understandably uncertain about the second sign – should it be read AT or LA? –, but strangely ignoring the two signs to the right of AT / LA), and aATU as *wa-al-du-DINGIR* (also ignoring the two signs, but moreover strangely reading “-al-” instead of “-la-”). Nevertheless, it is quite clear that the name can be read *wa-at/la-ni-iš₆-tù-an*. Admittedly, the *ni* has a remarkably square shape, and the presence of *iš₆* instead of *iš* is uncommon. However, *iš₆* is written at the end of the line, where an *IŠ* would not have fitted (or should we view the sign here as a very abstract version of *IŠ*?). Since the reading of *wa-at-ni-iš-tù-a-an* in TC 3, 191: 27 is without any doubt, it seems reasonably certain that in CCT 1, 23: 14 the correct reading is *wa-at-ni-iš₆[?]-tù-an*.

6.2 Less Certain Cases

Next to the names treated in the preceding section, there are also Kanišite names (ten in total) that may have a Hittitoid character, but for which this is less certain.

6.2.1 *damišiet* (g.u.)

See § 7.4.2 for a treatment.

6.2.2 *ḥanaḥana* (f.)⁹⁸⁸

At the surface, this name looks like a typically reduplicated Lallname, and thus may be regarded as belonging to the group of names the linguistic background of which cannot be established (cf. section 4.7). Nevertheless, a Hittitoid interpretation has been proposed by Bilgiç (1945–1951: 6⁴⁶), who connects *ḥanaḥana* to the Hittite theonym ^d*ḥannaḥanna*- (the phonetic rendering of the Mother Goddess DINGIR.MAḪ).⁹⁸⁹ This connection is accepted by e.g. Zehnder (2010: 141).

At first sight it may indeed seem striking that Kanišite *ḥanaḥana* is a woman's name, because this would match the fact that ^d*ḥannaḥanna* refers to a female deity. However, most of the other Kanišite reduplicated names with a similar structure refer to women as well (e.g. *ḥunaḥuna* (f.), *kadakada* (f.), *kanakana* (f.), *manamana* (f.), *pitipiti* (f.), *walawala* (f.), *zapizapi* / *zipizipi* (f.)), so the female character of *ḥanaḥana* is in itself no argument. The connection between *ḥanaḥana* and the theonym ^d*ḥannaḥanna* therefore remains nothing more than a possibility.

Etymologically, it is generally assumed that ^d*ḥannaḥanna*- is a reduplication of the Hittite word *ḥanna*- 'grandmother'.⁹⁹⁰ If it can be equated with Kanišite *ḥanaḥana*, the latter may be analysed as /han:ahan:a-/ 'primordial grandmother / mother goddess'.

6.2.3 *kanuškan* (m.)⁹⁹¹

This name, which is attested only once, resembles in its latter part the names *ilališkan* and *šaḫiškan*, which above were interpreted as Hittitoid names

988 *ḥa-na-ḥa-na* (KKS 36a: 2; KKS 36b: 8; C 37 Landsberger: 4). Another attestation of "Hana-hana" is cited by OAPD for the unpublished text kt k/k 10 [1b] (as wife of *pului*).

989 Cf. Van Gessel 1998: 82–3; Haas 1994: 432f.

990 Reflecting PIE **h₂enHo-*, cf. Puhvel HED 3: 85; Kloekhorst 2008: 285.

991 *kà-nu-uš-kà-an* (kt t/k 32: 4).

reflecting old participles in *-ant-* of imperfective verbal stems in *-ške/a-*. This makes it at first sight attractive to analyse *kanuškan* in a similar way. It is problematic, however, that no good Hittite comparandum for its initial part, *kanu-* (or *kanuš-*?) can be found: I know of no Hittite verb that matches it. A Hittitoid interpretation of this name, although in principle attractive, must therefore remain uncertain.

6.2.4 *ka[taša]šar* (f.)

This name is attested once, and is broken: *kà-[ta-ša-]šar* (kt n/k 1858, 9; cf. Donbaz 1988: 55¹⁶). As Zehnder (2010: 184) states, “[e]s ist anzunehmen, dass die Ergänzung der zwei Zeichen *ta-ša* nach einer anderen Stelle des unveröffentlichten Dokuments erfolgt”.⁹⁹² If the name really is *katašašar*, then it would be interesting to have a woman’s name ending in *-šar*, since this latter element is used as a feminizing suffix in the Hittitoid element *-ḫšušar*. It therefore may be attractive to regard *katašašar*, too, as a Hittitoid name.⁹⁹³ Unfortunately, the initial part *kataša-* does not have any clear Hittite parallels (thus also Zehnder 2010: 184: “die Analyse [bleibt] insgesamt unklar”).

6.2.5 *kunuan / kunuat* (m.)⁹⁹⁴

If the two variants in *-an* and *-at* can be equated with each other, the underlying name must have ended in */-and-/* (cf. § 5.2.3). In principle, a name */kunuand-/* could represent a Hittitoid formation in *-uant-*, with the element *kun-* being related to Hitt. *kuyan-* ‘dog’. If so, *kunuan / kunuat* could represent */kunuand-/* ‘he who has dogs’. This interpretation must remain speculative, however.

6.2.6 *nakištuar* (?) (g.u.)⁹⁹⁵

This name looks relatively Hittitoid, because it contains the elements *naki-*, which often occurs as the initial element of Hittitoid compound names (cf. § 5.3.98) and *-štu-*, which may be present in *watništuan* as well (cf. § 6.1.8). The element *-ar* is unclear, however. Moreover, the look-alike *nikituar* (m.)⁹⁹⁶

992 But cf. footnote 545, where a case is treated in which Donbaz seems to have restored signs without any good ground.

993 Likewise *nišašar* (f.), as treated in § 6.2.7.

994 *ku-nu-wa-an* (AKT 10, 61a: 17; AKT 10, 61b: 1; ICK 4, I 837: 6, 28, 36; kt c/k 1637: 8; kt c/k 1639b: 26 (-an!); kt e/k 167 [1b]: 7; kt 89/k 371 [1b]: 5), *ku-nu-an* (C10 Landsberger: 9). Other attestations of “Kunuan” are cited by OAPD for the unpublished texts Brussel 3 and kt 99/k 139. An attestation “Kunuat” is cited by OAPD for the unpublished text kt f/k 163a–b.

995 *na-ki-iš-tù-ar* (BIN 4, 183: 6; kt 88/k 1087: 7, 13), *na-ki-iš-tù-wa-ar* (VS 26, 125: 10).

996 *ni-ki-tù-a-ar* (kt 88/k 1082: 6), *ni-ki-tù-ar* (kt 88/k 1082: 12).

may indicate that the segmentation should be different (cf. also the group of names ending in *-ar* treated in section 4.7).

6.2.7 *nišašar* (f.)⁹⁹⁷

This name, which occurs only once, is remarkable since it is a woman's name that ends in *-šar*. As we have seen above, the Hittitoid feminine element *-ḫšušar* is derived from masculine *-ḫšu* by adding the suffix *-šar*. It therefore is tempting to view the name *nišašar* as Hittitoid as well.⁹⁹⁸ Moreover, its initial part, *niša-*, can then be equated with the element *niša-* that is attested in *nišašue*, and which may be equated with ^{URU}*nēša-*, the Hittite name of Kaniš.⁹⁹⁹ If correct, this would give a meaning 'Nešite woman' for *nišašar*. Zehnder (2010: 236), who contemplates a similar analysis as well, is cautious, however. He states that since *nišašar* is attested only once, "sich der Verdacht auf[drängt], dass es sich nur um eine entstellte Schreibung für sehr häufiges kapp. ^(f)*Niwaḫšušar* handelt". This does not seem attractive to me: the phonetic difference between *nišašar* and *niwaḫšušar* is just too large.

6.2.8 *tarikuda* / *tirikuda* (m./f.?)¹⁰⁰⁰

This name does not contain elements that are found in any of the other Kanišite names, and it therefore cannot be independently argued that it belongs to the group of names with a Hittitoid background. The following analysis, which proposes that the name may have a Hittitoid, Indo-European origin, must therefore remain speculative.

Although the name *tarikuda* / *tirikuda* occasionally occurs spelled *-ku-ta*, with the sign TA (8 times), it is in the majority of cases spelled *-ku-da*, with the

997 *ni-ša-šar* (CTMMA 1, 78: 22).

998 Cf. also *ka[taša]šar* (f.) as treated above.

999 Güterbock 1958: 50; Del Monte & Tischler 1978: 290–1.

1000 *ta-ri-ku-da* (AKT 10, 37a: 11; AKT 10, 37b: 1; AKT 10, 46a: 19; AKT 10, 46b: 7; ATHE 75: 1; BIN 6, 226e: 3 ([...-d]a); BIN 6, 226t: 22; C41 Landsberger: 3; CCT 6, 34a: rev. 12 ([t]a-ri-ku[-da]); TC 1, 100: 22; TC 3, 253: 17; TPAK 1, 161a: 18; TPAK 1, 161b: 1 ([...-d]a); kt 87/k 285: 4; kt 88/k 1050: 13; kt 91/k 281: 3; kt f/k 81: 3; kt k/k 35: 19; kt k/k 35b: 3; kt m/k 5: 39; kt m/k 24: 41; kt m/k 35: 40; kt n/k 73: 1; kt n/k 74: 2; kt n/k 75: 6; kt v/k 152: 8; kt v/k 153: 4, 11), *ta-ri-ku-ta* (AKT 8, 209b: 11; ICK 1, 39a: 4 (*ta*-[...]), 9; ICK 1, 39b+c: 3, 10; kt n/k 75: 6; kt n/k 1854: 1, 11; kt 87/k 266: 2), *da-ri-ku-da* (kt c/k 183: 2), *tí-ri-ku-da* (BIN 6, 225: 1, 11; KKS 21b: 3; TC 1, 100: 22). Other attestations of "Tarikuda" are cited by OAPD for kt 94/k 490, kt 94/k 1200 and Oslo 32_446, and of "Tirikuda" for kt 94/k 282. Since OAPD does not give precise spellings, we cannot be certain about the spelling of these forms, however. We also once find the form *ta-ri-ku-ta-na* (kt g/t 35 [1b]: 56). According to Zehnder (2010: 42–3) it represents a hypocoristic form from *tarikuta*.

sign DA (24 times). We may therefore safely assume that the name contains a /d/. The alternation in spelling between *ta-ri-* and *tí-ri-* indicates that underlyingly the name started in /tri-/, with a cluster /tr-/, which could be pronounced [tri-] (spelled *ta-ri-*) as well as [təri-] (spelled *tí-ri-*).

If, as in *humad-* = /hōmand-/ and *šada-* = /sanda-/ (cf. §§ 5.3.45 and 5.3.112), the /d/ in *tarikuda* / *tirikuda* represents a cluster of a nasal + /d/, we may assume for this name an underlying form /trikunda/. Moreover, since the vowel *u* often is an anaptyctic vowel that occurs in consonant clusters, we may investigate whether this could be the case in this name as well. As we have seen in § 3.2.6, the anaptyctic vowel *u* only occurs when one of the adjacent sounds is labial. For *tarikuda* / *tirikuda* this could mean that the preceding velar was a labiovelar: */trik^wnda/ > /trik^wunda/ = *ta/irikuda* (cf. the treatment of *išpun-* / *šapun-* / *šupun-*, § 5.3.62, where it is argued that the vocalization of a cluster *C^{lab}nC > /CunC/ with /u/ was phonologized already in pre-Kanišite times). Another possibility may be that the nasal was labial: */trikmda/ > /trikumda/ = *ta/irikuda*. If this latter analysis is correct, an interesting Indo-European etymology is possible: */trikumda/ would in principle be the regular Hittite outcome of PIE *tri-k^{mt}o-, the ordinal number ‘thirteenth’.

Semantically, this analysis could make sense: it is not uncommon that names are based on numerals, cf. the Kanišite name *šaptamanika*, probably ‘seventh sister’, but also, for instance, Lat. *Quīntus*, litt. ‘fifth’, a name that could be given to the fifth child that was born in a family. One could argue that ‘thirteenth’ may be a rather high number, but cf. the existence of the Latin name *Decimus*, litt. ‘tenth’.¹⁰⁰¹

In this sense it is also interesting to note that the name *ta/irikuda* is often used by men,¹⁰⁰² but may also have been used by women.¹⁰⁰³ If this is indeed

1001 Moreover, in Roman society, personal names based on ordinal numbers could not only refer to the numerical position of a child within its family, but also to the number of the month in which it was born (cf. Solin 2012).

1002 Ascertained for *tarikuda* on AKT 10, 46 (son of *hapua*[...]), on kt n/k 73 and kt n/k 74 (in both cases specified as son of *šumiawa*), and on kt n/k 75 (brother of *hapuala*).

1003 In TC 3, 253, a *tarikuda* (line 17) occurs that may have been a woman. Although masculine verb forms are used for this person (*i-lá-kam-ma* ‘he will come’ (line 18), *i-š[a-qa]* ‘he will pay’ (line 18), *i-ša-qa* ‘id.’ (line 19)), his/her daughter is referred to by *me-er-a-sà* ‘her daughter’ (line 20), with the feminine possessive suffix *-ša*. This means that either a mistake is made in the verbal gender agreement, which would mean that *tarikuda* is a woman (thus Kienast 1984: 125–7, who states she may have been the wife of *nakiliet* (lines 7, 10)), or a mistake is made in the gender agreement of the possessive suffix, which would mean *tarikuda* is a man (thus Hecker 1980: 74, with footnote 45). Since most mistakes in gender assignments involve the use of masculine morphemes for female persons, I am inclined

the case, the name *tarikuda* would be neutral to gender, which would fit the absence of gender marking in Hittite adjectives, and thus would be in line with the interpretation of *ta/irikuda* as an original ordinal number.

As said before, since there is no independent evidence that supports this analysis, all this must remain a mere suggestion.

6.2.9 *taršiet / taršiat* (m./f.)

See § 7.4.1 for a treatment.

6.2.10 *wališiet* (m.)

See § 7.4.3 for a treatment.

6.3 Excursus: the Alleged(?) Kanišite Name *labarna*(š)

In his edition of the text kt 88/k 713 [1b], Donbaz (1993: 145–6) cites for line 3 the words “KIŠIB La-[ba]-ar-na-áš”, which he translates as “seal of La[bar]naš”. This reading is taken over by Kryszat (2008a: 235–6), who points out that many names occurring in this text appear with an extra -š, which he interprets as a Hittite case ending (cf. also § 4.2.3). He therefore states that the form “La-[ba]-ar-na-áš” represents “Labarna(š)”.

Also Forlanini (2010: 121) adopts Donbaz’ reading, and, in an article dealing with the early Hittite kingdom, takes this “Labarna” as an example of “some later imperial names [that] are found already in Kültepe documents from the end of the 18th century”, and he wonders whether this Labarna may belong to a family the members of which “may constitute ancestors of the Kanisite line of the Hittite royal family” (*ibid.*).

Unfortunately, the status of Donbaz’ reading of this name as “La-[ba]-ar-na-áš” is totally unclear. No photograph or hand copy of the text kt 88/k 713 is provided in his edition. It therefore cannot be verified whether the restoration of the sign BA in the break between the signs LA and AR is, for instance, based on any traces of a sign BA. However, Donbaz’ transliteration “-[ba]-” (not “-[b]a-” or “-b[a]-”) seems to indicate that the gap or damage between the signs LA and AR is so large that nothing of the intermediate sign has survived. This raises the question, however, what Donbaz’ restoration of the sign BA is in fact based on. He does not give any justification for it, which is unlike some

to assume that in this case the masculine verbal forms must be viewed as mistakes, and that the feminine possessive suffix indicates that *tarikuda* was a woman.

other restorations of names that he proposes in the same article. For instance, the restoration of “Wa-[ša-tap-ra]” in kt 89/k 370: 1 is justified with the remark “Restored after Kt 89/k 383, 1” (cf. Donbaz 1993: 141⁴³). Do we therefore have to assume that his restoration of “La-[ba]-ar-na-áš” is not based on a real parallel? Personally, I know of no example of a name *laparna*(š) (cf. § 3.1.1 for the fact that the sign BA can be read *pá* as well) in the Old Assyrian corpus. We do find several instances of a name *laparša* (m.),¹⁰⁰⁴ but this does not justify the existence of a name “*laparna*(š)”. Likewise, we have one attestation of a name *zaparna* (m.),¹⁰⁰⁵ but this does not justify the existence of a name “*laparna*(š)”, either. Moreover, it is likely that this one attestation of *zaparna* is in fact a mistake for *zapar<aš>na*,¹⁰⁰⁶ which would make this name even more removed from a hypothetical “*laparna*(š)”.

All in all, I know of no material within the Old Assyrian texts that would justify a restoration of the form *la*[-x-]*ar-na-áš* as “*la*[-*pá*-]*ar-na-áš*”. Since we have seen earlier on that some other restorations of Donbaz’ do not seem to be trustworthy,¹⁰⁰⁷ I am skeptical of the correctness of Donbaz’ reading of this name as “La-[ba]-ar-na-áš”. I would therefore be very careful with basing any historical argumentation on it (*pace* Forlanini 2010: 121, 124).

¹⁰⁰⁴ *lá-pá-ar-ša* (AKT 1, 59e: 2, 5; AKT 1 59t: 3; AKT 3, 42: 1; AKT 10, 21at: 20; AKT 10, 21b: 5; ICK 1, 178: 2; ICK 4, 1 513: 18; VS 26, 101: 4; kt c/k 1639b: 25), *la-pá-ar-ša* (AKT 6a, 274: 3; KTB 9: 7 (*l[a-p]á-*), 9; kt 87/k 39 [1b?]: 29 ([*-ša*])); *lá-pár-ša* (AKT 3, 42: 11, 13), *la-pár-š[a]* (kt n/k 39 [1b]: 3). Other attestations of “Labarša” are cited by OAPD for the unpublished texts kt f/k 80a–b, kt k/k 10 [1b], kt 87/k 259 and kt 91/k 182.

¹⁰⁰⁵ Cf. footnote 247.

¹⁰⁰⁶ Cf. footnote 292.

¹⁰⁰⁷ Cf. § 5.3.22, with footnote 545.

Excursus 1: Kanišite *ašie/at* (m.) and *na/ikilie/at* (m.) and the Hittite Verbal System

There are several Kanišite names ending in *-iet* / *-iat*, which will be treated together in this chapter. It will be argued that they may represent Hittitoid verbal forms.

7.1 *ašie/at* (m.) and *na/ikilie/at* (m.)

As was explained in § 3.2.12, the Kanišite men's name that is spelled *a-ší-it*, *a-ší-e-it* and *a-ší-i-it*¹⁰⁰⁸ must underlyingly have contained a diphthong, either /aseit/ (in which case we would have to read *a-šé-it*, *a-šé-e-it* and *a-šé-i-it*, respectively) or /asiet/ (in which case we would have to read *a-ší-et*, *a-ši-e-et* and *a-ší-i-et*). The same then goes for the men's name that is spelled *na-ki-li-it* / *ni-ki-li-it* as well as *na-ki-li-e-it* / *ni-ki-li-e-it*.¹⁰⁰⁹ In principle, we could read /nkileit/ or /nkiliet/ (initial cluster /nk-/ because of the alternation between *na-k°* and *ni-k°*, cf. § 3.2.3). However, the one attestation *ni-ki-il₅-it* (AKT 9a, 85: 13) shows a broken spelling *-il₅-it*, which, according to the orthographic rules of Old Assyrian, may be used for writing either *?*, *y* or *w* (cf. Kouwenberg 2017: 70f.). In this case, the information of the other spellings makes clear that we

¹⁰⁰⁸ *a-ší-it* (AKT 8, 310: 16; AKT 10, 2a: 22; AKT 10, 2b: 3; ICK 1, 9: 16; ICK 2, 61: 2; ICK 4, 1 534: 13 (-it¹); KKS 21b: 11, 15, 20 (-š[í-it]); KTH 28a: 13; SUP 1: 1, 7; kt n/k 32 [1b]: 8, 34; kt n/k 71: 2; kt n/k 73: 10; kt n/k 74: 11, 15; kt n/k 75: 11), *a-ší-e-it* (KKS 21a: 3, 9, 13, 19; TC 3, 191: 4; kt n/k 72: 12, 19; kt n/k 76: 12; kt n/k 77: 10; kt v/k 152: 14, 18), *a-ší-i-it* (KTH 28a: 4, 7; KTH 28b: 6 (-[í]t), 10). Other attestations of "Ašid" are cited by OAPD for the unpublished texts kt 87/k 379, kt 91/k 201, kt 91/k 208, kt 94/k 1501, and kt 94/k 872.

¹⁰⁰⁹ *na-ki-li-it* (AKT 5, 40: 23, 26; AKT 5, 62: 29; AKT 5, 63: 27; AKT 6c, 644: 14; AKT 10, 13a: 6; AKT 10, 13b: 12; AKT 10, 30a: 14; AKT 10, 30b: 2; AKT 10, 38a: 17; AKT 10, 38b: 3; AKT 10, 49a: 19; AKT 10, 49b: 2; TC 3, 253: 4, 7, 10; kt k/k 14b [1b]: 20; kt 89/k 379a [1b] (Günbatt 2014, nr. 4): 6 ([...]-l_i-it), 10 (*na-k[i-l]i-it*), 19 ([...-k]i-li-it); kt 89/k 379b [1b] (Günbatt 2014, nr. 5): 2, 6, 13; kt 89/k 383b [1b] (Günbatt 2014, nr. 13): 30 (<-ki->); kt 99/k 138a [1b]: rev. 10; kt 99/k 138b [1b]: obv. 2, rev. 1), *ni-ki-li-it* (AKT 6b, 470: 9; TC 3, 214a [1b]: 1, 8 ([...]-li-it), 23; kt 73/k 14 [1b]: 4), *na-ki-li-e-it* (AKT 10, 17b: 7; AuOr 8, 197–205: 6), *ni-ki-li-e-it* (KTP 44, 20; cf. the transliteration in CDLI; Goetze's reading "*Na-ki-le-e-yi-i-it*" (1954a: 358) of this form is clearly mistaken). Note that *na-ki-li-it* of AKT 6c, 644 (= kt 94/k 1377) is referred to by OAPD as "Wakiled", apparently misreading the sign NA (𐎠𐎶) as WA (𐎶𐎠). The name "Wakiled" should be stricken from our inventory.

should read a *y*, which automatically determines the value of IT as *-et*: *nikilyet*, which stands for /nkiliet/. Another argument in favour of reading /nkiliet/ and, by association, /asiet/, is the fact that both names have counterparts ending in *-iat*: *ašiat* (m.)¹⁰¹⁰ and *na/ikiliat* (m.)¹⁰¹¹. In this way, the alternation between *e* and *a* can be seen as reflecting Hittite ablaut.

According to Bossert (1944: 69–70 (with reference to an unpublished manuscript by Bilgiç); 1946: 119), the name *ašie/at* is to be connected with the Hittite verb *āššīje/a-* ‘to be loved’, which is followed by Goetze (1954a: 358–9). The latter points out that the name *na/ikilie/at* is attested in Hittite texts as well, as *ṁnakkiliet*,¹⁰¹² which shows the presence of a geminate *-kk-*. Goetze therefore traces this name back to an unattested Hittite stem **nakkilije/a-*, which would be a derivative of *nakkī-* ‘important, valuable’. These interpretations of the stems of *ašie/at* and *na/ikilie/at* seem semantically and formally attractive to me.

7.2 A Morphological Analysis

The exact morphological interpretation of these names is more difficult, however. In Bossert’s view (1944: 69–70), *ašiat* must be connected with the theonym *ṁāššījaza* (KUB 2.8 ii 40), which to his mind can be equated with the Hitt. participle *āššījanza*.¹⁰¹³ He therefore translates *ašiat* as “Liebling” (with reference to Bilgiç). It is difficult to explain, however, why other Kanišite names ending in *-and/* show predominantly spellings in *-an*, whereas of *ašiat* no variant ***ašian* is known. Moreover, the variant *ašiet* cannot be explained in this way: the Hittite participle suffix is always *-ant-*, never ***ent-*.¹⁰¹⁴ A connection between *ašiat* and Hitt. *āššiant-* is therefore best forgotten.

Also Goetze (1954a: 358⁶⁸) rejects the view that *ašiat* reflects a form in *-ant-*, but he does uphold the connection with the theonym *ṁāššījaza*. To his mind, this name must not be analysed as an old participle *āššījant-* + *-s*, but rather as “*Aššiyat+s*” (1954a: 358⁶⁸), i.e. as a nominal *t*-stem (compare Hittite deverbal

1010 *a-šī-at* (AKT 3, 52: obv. 13; KUG 8: 9), *a-šī-a-at* (AKT 4, 19: 11; AKT 8, 315: 8, 17; BIN 6, 193: 8 (a[*-šī-a*]-at); CCT 6, 34a: 8 (*-[at]*)).

1011 *na-ki-li-at* (kt c/k 117: 114 (<*-ki->*); kt c/k 126: 20; kt c/k 527: 6; kt c/k 698: 2; kt c/k 740: 1, 18; kt 87/k 253: 7), *na-ki-li-a-at* (AKT 5, 68: 4, 6), *ni-ki-li-a-at* (kt a/k 1263b: 8).

1012 *ṁna-ak-ki-li-et* (KBo 3.34 ii 30 (<*ṁ*>); KBo 3.35, 25 (*-[i-...]*)).

1013 Thus also Zehnder 2010: 13.

1014 Furthermore, the Hittite spelling of Kanišite *na/ikiliet* / *na/ikiliat* as *ṁnakkiliet* indicates that in this name there certainly was no *-n-* present before the final *-t*, which then is likely the case in *ašiet* / *ašiat* as well.

t-stems like *aniṭatt*- ‘work, task’, *karṣatt*- ‘cutting, removal’, *kardimiṭatt*- ‘anger’, *tarnatt*- ‘ration, portion’, etc.). By extension, this would mean that he analyses Kanišite *ašiat* as a *t*-stem as well. This suggestion does not hold much water either, however. First, Goetze’s analysis does not explain the variant *ašiet* (in Hittite, *t*-stems always end in *-att*-, never in ****-*ett*-). Second, the form ^d*āššija*za is nowadays usually thought to represent a Luwian acc.pl. form of a theonym ^d*āššija*-.¹⁰¹⁵ This name therefore has no bearing on the interpretation of Kanišite *ašie/at*.

7.3 *ašie/at* and *na/ikilie/at* as Original Verbal Forms

To my mind, a better interpretation of the names *ašie/at* and *na/ikilie/at* starts with a remark by Goetze, namely that the alternation between *-ie*- and *-ia*- is reminiscent of the alternation between Hittite verbal forms like *tīet* and *tīat* ‘he steps’ (1954a: 358). I therefore view this alternation as an indication that these names originally were finite verbal forms. In fact, the comparison with Hittite *tīet* / *tīat* also points towards the direction which verbal forms they could be, namely 3sg.pret.act. forms ending in *-t*. This is, in my view, formally the only interpretation that makes sense.

On the semantic side, an interpretation of *ašie/at* and *na/ikilie/at* as 3sg.pret.act. forms, i.e. ‘he was loved’ and ‘he was important’, may raise some eyebrows: are preterite verbal forms likely candidates for personal names? In Old Assyrian, we do find names that contain preterite verbal forms, but these are usually parts of sentence-names, like *aššur-iddin* ‘Aššur has given’. Moreover, in these names the subject of the preterite verbal form is always someone else than the bearer of the name. In the case of Hittitoid *ašie/at*, derived from *āššije/a*- ‘to be loved’ and *na/ikilie/at*, derived from **nakkilije/a*- ‘to be important’ (*vel sim.*), it is more likely that the verbal action should have the bearer of the name as its subject. Fortunately, there is a way out of this semantic problem. From an etymological point of view, the Hittite preterite forms can be equated with the Sanskrit category injunctive, which is a tenseless category: e.g. Hitt. *kuenta* ‘he killed’ ~ Skt. *hán* ‘he killed / kills / will kill’ < **g^{wh}én-t*. As I have argued elsewhere (Kloekhorst 2017b, with references), the tenselessness of the Sanskrit category must be original, which means that the Hittite preterite forms originally were tenseless, too. Moreover, I have argued (*ibid.*) that traces of this original situation may still be visible in the oldest Hittite narrative texts, which

¹⁰¹⁵ Which always occurs in the plural: nom.pl. ^d*āššia(n)zi*, acc.pl. ^d*āššia(n)za*, dat.-loc.pl. ^d*āššija(n)za*, cf. Van Gessel 1998: 50.

implies that the semantic development of an original tenseless category into a specifically preterite category may have been a relatively recent development. If this is correct, we may assume that the verbal forms that underly the names *ašie/at* and *na/ikilie/at* originally were tenseless as well: ‘he was / is / will be loved’ and ‘he was / is / will be important’. This makes much more sense for the semantics of personal names.

One detail that needs to be treated is the voice of the form *ašie/at*. If this name really goes back to an original 3sg.pret. active form, it would contradict the fact that in Hittite the verb *āššīe/a-* only shows forms of the middle voice.¹⁰¹⁶ To my mind, this may be a secondary situation. In Hittite, we know several verbs that show a middle root paradigm next to an active paradigm that is derived with the *-īe/a-* suffix: e.g. middle *hatt-a^(ri)* vs. active *hazzīe/a-zī* ‘to pierce, to prick’; middle *uešš-ta^(ri)* vs. active *uašše/a-zī* (< **us-īe/o-*) ‘to be dressed, to wear’; middle *huett-ta^(ri)* vs. active *hu(e)ttiē/a-zī* ‘to draw, to pull’.¹⁰¹⁷ Since, besides the stem *āššīe/a-ta^(ri)*, the Hittite paradigm of ‘to be loved’ also knows the stem *āšš-a^(ri)*,¹⁰¹⁸ we may assume that this verb originally showed a similar system: a root middle *āšš-a^(ri)* vs. a derived active **āššīe/a-zī*. The fact that all attested forms of the stem *āššīe/a-* (all found in NH texts) show the middle inflection must then be blamed on a merger of the two originally different stems, which can also be observed in the case of *huett-ta^(ri)*, *hu(e)ttiē/a-zī* ‘to draw, to pull’ (where original *huttiē/a-zī*, through *huettiē/a-zī*, was changed into a middle verb *huettiē/a-ta^(ri)*, cf. Kloekhorst 2008: 351).

All in all, I propose that *aši/eat* and *na/ikilie/at* should be analysed as /ʔasi:ét/, /ʔasi:át/ and /nk:iliét/, /nk:iliát/, respectively, both originally verbal forms with the ending *-t* that, synchronically in Hittite, represents a preterite 3sg.act. form, but which historically marked a tenseless (“injunctive”) form. This means that both names can be translated as tenseless verbal forms, namely ‘he was / is / will be loved’ and ‘he was / is / will be important’, respectively.

7.4 Other Names in *-iet* / *-iat*

The interpretation of other Kanišite names ending in *-iet* and/or *-iat* is less straightforward, mostly because their initial parts can be less easily connected with Hittite verbal stems.

¹⁰¹⁶ Cf. Kloekhorst 2008: 215.

¹⁰¹⁷ Cf. Kloekhorst 2008: s.vv.

¹⁰¹⁸ 3sg.pres.midd. *a-aš-ša-a-ri* (KUB 59.50 rev. 4 (NS)), 3pl.pres.midd. *a-aš-ša-an-ta-ri* (KBo 22.126 obv. 4 (NS)).

7.4.1 *taršie/at* (m./f.)

The question whether the name *taršiat* (m.)¹⁰¹⁹ may be interpreted as a Hittitoid verbal form as well is less clear. The existence of a name *taršit* (m./f.),¹⁰²⁰ which may be read *taršiet* as well, points to a pair *taršiet* / *taršiat*, which is reminiscent of the situation regarding *ašie/at* and *na/ikilie/at*. We may therefore assume that *taršie/at*, too, contains the Hittitoid verbal ending /-ie/at/. A Hittitoid interpretation of the stem of this name is less self-evident, however. Zehnder (2010: 13) connects *taršiat* (which he interprets as reflecting a participle form **taršīiant-*) to the verb *tarši-* ‘to drive (someone)’. Although this verb is attested in Hittite texts, it is clearly of a Luwian origin: it shows Luwian endings (e.g. 3pl. *taršientī*) and is often preceded by a gloss wedge. This makes it a less attractive candidate, since there is hardly evidence for Luwic elements in Kanišite personal names (cf. section 4.4). Moreover, semantically this connection is not very appealing (‘he was / is / will be driving’?). A genuine Hittite verb that has a formal resemblance, too, is *tarsš-* ‘to become dry’ or ‘to make dry’, but this verb is not attested with the *-īe/a-* suffix. Moreover, semantically the connection does not make much sense (‘he made / makes / will make dry’ or ‘he became / becomes / will become dry’?).

7.4.2 *damišiet* (g.u.)

The name that is spelled *da-mi-šī-e-it* (KTS 1, 57c: 13; MAH 19613 (Garelli 1965: 46–7): 13) (g.u.) may, in view of the above treatments, be interpreted *damisiet*, i.e. ending in *-iet* as well (thus Zehner 2010: 13). According to Zehnder (*ibid.*) we should interpret this name as **tameššīiant-*, which would be equivalent to *tameššant-*, the participle to the Hittite verb *tamāšš-^{zi} / tame/išš-* ‘to (op)press’ (note that Zehnder assumes that the names ending in *-iat* / *-iet* go back to participles in /-and-/ , which, as we have seen above, is unlikely). Translated into the interpretation as given here, this would mean that *damišiet* reflects a Hittite form **tameššiet* ‘he was / is / will be oppressing’. Semantically, the connection may have some merit, if ‘he was / is / will be oppressing’ should be interpreted as denoting that the person will be victorious in battle *vel sim.* (note that Zehnder’s translation “gebändigt, gezähmt” does not make much sense). Formally, it is problematic, however, that Hitt. *tamāšš-* / *tame/išš-* is never attested with the *-īe/a-* suffix. An interpretation as **tameššiet* must therefore remain open.

1019 *ta-ar-šī-a-at* (kt 87/k 303: 6). Another attestation of “*Taršiat*” is cited by OAPD for the unpublished text kt 91/k 147.

1020 Cited as “*Taršit*” by OAPD for the unpublished texts kt 87/k 259, kt 87/k 296, and kt 94/k 308.

7.4.3 *wališiet* (m.)

The men's name that is spelled *wa-li-šl-it* (Chantre 2: 4) as well as *wa-li-šl-e-it* (TC 3, 19: 16) may, in view of the plene spelling in the latter attestation, be read *wališiet*, and thus be reminiscent of the other names ending in *-iet*. Interpreting this name as Hittitoid is difficult, however: as far as I am aware, in Hittite no verbal stems resembling *wališ-* or *wališie-* are attested.

Excursus 2: Kanišite *-ašue* and the Feminine Gender in Hittite and Proto-Indo-European

In § 5.2.5, we have seen that one of the elements that is used as the final element of Kanišite Hittite personal names is *-ašue*, which exclusively forms women's names. Especially the names *šakriašue* / *šikriašue* (f.), *šupiašue* (f.), and *watniašue* (f.), with their clear Hittitoid initial elements *šakri-* / *šikri-*, *šupi-* and *watni-*, firmly embed *-ašue* into the group of Hittitoid elements.

8.1 *-ašu-e* and PIE **-ih₂-*

According to Goetze (1960: 50), *-ašue* must be viewed as the feminine counterpart of the element *-ašu*, which exclusively forms men's names (cf. § 5.2.4), and the two would thus form a pair comparable to the masculine / feminine element pair *-ḫšu* (m.) / *-ḫšušar* (f.). Moreover, to his mind, “no Indo-Europeanist can fail to see” that the pair *-ašu* (m.) / *-ašu-e* (f.) can be compared to the way in which in other Indo-European languages feminine derivatives are based on masculine *u*-stem adjectives. Take for instances cases like Skt. *svādvī-* (f.) ‘sweet’ (besides *svādú-* (m.)) and *pr̥thvī-* (f.) ‘broad’ (besides *pr̥thú-* (m.)), which are feminine adjectives derived from *u*-stem adjectives by using the specifically feminizing suffix *-ī* < PIE **-ih₂-*. As Goetze remarks, a similar analysis of Kanišite *-ašu-e*, if correct, would be important since it would be “the first time that a formal feminine appears in an early Anatolian language” (1960: 50).

Although Goetze's interpretation of *-ašue* is referred to by Laroche (1966: 321), it seems to have been largely forgotten since then. In recent times, only Zehnder (2010: 81) mentions it, but states that it “kaum aufrecht zu erhalten [ist]”, especially because no comparable feminizing suffix is found in the other Anatolian languages. Moreover, Zehnder adds, the relationship between *-ašu* and *-ašue* cannot be compared to the relationship between *-ḫšu* and *-ḫšušar*, because “von den bisher bekannt gewordenen kappadokischen Männernamen auf *-ašu* [teilt] keiner ein Vorderglied mit einem Femininum auf *-ašwe*”. It is indeed true that, unlike in the case of *-ḫšu* vs. *-ḫšušar* (with pairs like *ḫapiaḫšu* vs. *ḫapiaḫšušar*, *niwaḫšu* vs. *niwaḫšušar*, *šupiaḫšu* vs. *šupiaḫšušar*, etc.), of the names containing *-ašu* and *-ašue* no direct name pairs are attested: for instance, besides the women's name *ša/ikriašue*, no men's

name ***ša/ikriašu* is attested; besides *watniašue* (f.), no ***watniašu* has been found.¹⁰²¹ To my mind, however, this cannot be used as an argument. In general, names in *-ašu* and *-ašue* are attested less often than names in *-ḫšu* and *-ḫšušar*,¹⁰²² so the absence of a direct name pair in *-ašu* vs. *-ašue* can easily be due to chance. Moreover, since *-ašu* and *-ašue* are both well embedded into the group of Hittitoid personal names, the absence of direct name pairs is in fact irrelevant: *-ašu* and *-ašue* are “parts of an indivisible whole” (Goetze 1960: 46), and there is therefore nothing that prevents us from comparing them. Moreover, the element *-e* seems to be found outside of the pair *-ašu* / *-ašue* as well, namely in the pair *azu* (m.) / *azue* (f.), and in the women’s name *azu-elka*, which in § 5.3.25 was analysed as consisting of *azu-e-lka* (replacing earlier *azulka* = *azu-lka*).¹⁰²³ Zehnder’s reluctance in accepting Goetze’s analysis of *-e* as a feminine marker in these Kanišite names is therefore unfounded.

Apart from the semantic attractiveness of Goetze’s connection of Kanišite *-e* to the PIE suffix **-ih₂-*, also formally the comparison is valid. It has recently been argued, on independent grounds, that the regular outcome of the PIE sequence **-ih₂* in Hittite is *-ě*, as can be deduced from examples like Hitt. nom.-acc.pl.n. *kē* ‘these’ < **kíh₂*; nom.-acc.pl.n. *2-e* ‘two’ < **duíh₂*; nom.-acc.pl.n. *3-e* ‘three’ < **tríh₂* (all examples in word-final position; I know of no good evidence from word-internal position).¹⁰²⁴ To my mind there can therefore be no doubt that Goetze’s identification of *-e* in *-ašu-e* as reflecting PIE **-ih₂-* is correct.

8.2 Feminine Gender in Anatolian?

The recognition that the Kanišite feminizing suffix *-e* is cognate to PIE **-ih₂-* potentially has important consequences. It is well known that, although all other ancient IE languages have a three-way gender system of masculine, feminine and neuter, the Anatolian languages possess in their nominal system only two genders, namely common and neuter. And despite the fact that the

¹⁰²¹ For the seeming occurrence of a name *šupiašu* besides *šupiašue*, cf. § 5.2.4.

¹⁰²² We have 23 different names ending in *-ḫšu* that are assuredly Hittitoid (because their initial element occurs with other Hittitoid elements too), whereas the number of assuredly Hittitoid names with *-ašu* is only eight. Moreover, of the names in *-ḫšu*, only eight have an attested feminine counterpart in *-ḫšušar*: *ḫapiaḫšu(šar)*, *ḫa/ištaḫšu(šar)*, *ḫataḫšu(šar)*, *nimaḫšu(šar)*, *niwaḫšu(šar)*, *šadaḫšu(šar)*, *šam(n)ḫšu(šar)*, and *šupiaḫšu(šar)*.

¹⁰²³ Cf. § 5.3.25 for details.

¹⁰²⁴ Cf. Kloekhorst 2008: 91; 2010b: 17; 2012a: 260. The development of **-ih₂* to Hitt. *-ě* is comparable to the development of PIE **-uh₂* > Hitt. */-o/*, as seen in nom.-acc.pl.n. *a-aš-šu-u* ‘goods’ */-o/* < **-u-h₂*, cf. Kloekhorst 2008: 91.

Anatolian category of common gender contains words that correspond to lexemes in the other Indo-European languages that can be either masculine or feminine (e.g. Hitt. *ḫartakka-* (c.) ~ Skt. *ṛkṣa-* (m.) ‘bear’ vs. Hitt. *keššar* (c.) ~ Gr. *χείρ* (f.) ‘hand’),¹⁰²⁵ in the Anatolian languages no grammatical distinction between masculine and feminine gender is found.

For the sake of clarity, the Anatolian languages do have the possibility to form nouns that specifically refer to feminine beings, like for instance in the case of Hittite *išḫaššara-* ‘lady’, which is a derivative in *-ššara-* of *išḫā-* ‘lord’. What is crucial, however, is that such nouns referring to feminines do not show an agreement pattern that is different from their masculine counterparts; they take the exact same pronominal and adjectival attributes and predicates. Consider the following examples:

Hitt.	<i>kāš āššuš išḫāš</i>	‘this good lord’
	<i>kāš āššuš išḫaššaraš</i>	‘this good lady’

We see that the pronoun *kāš* ‘this’ and the adjective *āššuš* ‘good’ have a single shape, whether they belong to a noun referring to a masculine being or to a noun referring to a feminine being.

This is different in a language like Sanskrit, where nouns referring to masculine beings (e.g. *pāti-* ‘lord’) show agreement patterns that differ from nouns referring to feminine beings (e.g. *pātnī-* ‘lady’). Consider the following examples:

Skt.	<i>ayám vásus pātis</i>	‘this good lord’
	<i>iyám vásvī pātnī</i>	‘this good lady’

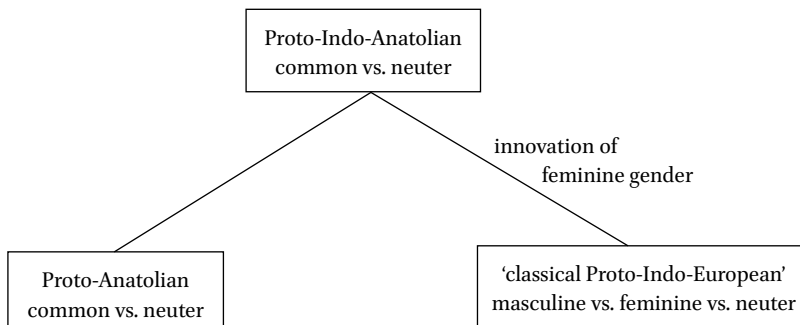

We see that the pronoun ‘this’ has two shapes, namely a masculine one, *ayám*, and a feminine one, *iyám*, and that this also goes for the adjective ‘good’, which shows a distinction between masculine *vásus* and feminine *vásvī* (all in the nom.sg. case). This is crucially different from the situation in Anatolian, and this raises the question: why does Anatolian not have a feminine gender (i.e., why does it not show specifically feminine agreement marking), whereas Sanskrit and all the other ancient Indo-European languages do?

Traditionally, the answer given to this question was that some time in its prehistory Anatolian must have lost the feminine gender (i.e. lost its system of feminine agreement marking), as has happened in other Indo-European languages like e.g. Armenian, Persian and English. However, these latter languages

¹⁰²⁵ The Anatolian neuter gender corresponds to the neuter gender of the other Indo-European languages, e.g. Hitt. *ēšḫar* (n.) ~ Skt. *ásṛk* (n.) ‘blood’.

have undergone a much longer period of linguistic development (centuries, if not millennia!) before they reached the stage in which their gender system was reduced. Moreover, these languages all went through a large extent of phonological decay that eroded the morphological markers of gender. In the case of Anatolian, which is phonologically much more archaic,¹⁰²⁶ we would expect that at least some traces of the feminine gender would have survived, especially in the pronominal system.

In the absence of such traces, an alternative hypothesis is nowadays gaining more ground, namely that Anatolian never had a feminine gender. This idea fits within the Indo-Anatolian hypothesis (also called the 'Indo-Hittite' hypothesis), which states that Anatolian is the first branch to split off from the Indo-European mother language, and that after this split the latter language underwent several innovations before it split up further into the other Indo-European branches. If we assume that one of these innovations was the creation of the feminine gender (i.e. the creation of specific agreement markers on pronouns and adjectives when they belong to nouns referring to feminine beings), we may assume that the Anatolian gender system (a two-way distinction between common and neuter gender) was original and should be reconstructed for 'Proto-Indo-Anatolian' (i.e. the Indo-European mother language of which Anatolian split off).

¹⁰²⁶ It is true that the PIE nominal suffixes **-o-* (which in the other IE branches is associated with masculine gender) and **-eh₂-* (which in the other IE branches is associated with feminine gender) have in Hittite eventually merged into *-a-*, and one may therefore be inclined to assume that this could have caused the collapse of an original system that differed between masculine and feminine gender, and that the two genders merged into the common gender of Hittite. However, the two suffixes have remained distinct in the Luwic branch (most clearly visible in Lycian, where PIE **-o-* yielded *-e-* (later replaced by *-i-*) and PIE **-eh₂-* yielded *-a-*, cf. Hajnal 1994), which means that the two suffixes were distinct in Proto-Anatolian as well. Since the absence of feminine gender is a Pan-Anatolian phenomenon and thus must be reconstructed for Proto-Anatolian, it cannot be linked to the merger of the nominal suffixes **-o-* and **-eh₂-* in Hittite *-a-*, which is a relatively recent, specifically Hittite development.

However, if the Kanišite feminizing element *-e* is really cognate to the PIE suffix **-ih₂-*, one could argue that finally a trace of the feminine gender has been found in an Anatolian language. And even more crucially: a morpheme that in the other Indo-European languages is used in feminine agreement marking: for instance, the Sanskrit feminine adjective *vásu-* ‘good’, which was used in the example given above, reflects **uésu-ih₂-*, in which the morpheme **-ih₂-* marks it as specifically feminine vis-à-vis its masculine counterpart *vásu-* < **uésu-*. One could thus argue that this is a trace of an earlier feminine agreement system in Anatolian and that thus Anatolian does go back to a language stage in which there was a three-way gender system. This would mean that, when it comes to this point, no Indo-Anatolian hypothesis would be necessary according to which the feminine gender is a common innovation of the non-Anatolian Indo-European languages.

To my mind, however, such conclusions would be too rash; if we look closely at the original function of the PIE morpheme **-ih₂-*, we will see that our conclusions may be a bit more subtle.

8.3 The Original Function of PIE **-ih₂-*

In other ancient Indo-European languages, like Sanskrit and Greek, the suffix **-ih₂-* is used to form nouns as well as adjectives and participles. When it forms nouns, it shows three basic functions (cf. Fellner 2014: 70; the following examples are taken over from him):

- (1) possessive (exocentric) nouns
e.g. Gr. μέλιτ- ‘honey’ → μέλισσα (**mélit-ih₂-*) ‘bee’ (< **(animal)* that has honey’)
- (2) individualizations / substantivations¹⁰²⁷
e.g. Skt. *cātuṣpad-* ‘four-footed’ → Gr. τράπεζα (**k^wtur-ped-ih₂-*)¹⁰²⁸ ‘(four-footed) table’
- (3) feminine motion
e.g. Skt. *jánitar-* ‘progenitor, father’ → *jánitrī-* (**génh₁-tr-ih₂-*) ‘mother’

¹⁰²⁷ Fellner (*l.c.*) refers to Jeremy Rau (p.c.) for this example.

¹⁰²⁸ Note that Van Beek 2013: 54 cogently argues that τράπεζα rather reflects **tr-ped-ih₂-*, and originally meant ‘(three-footed) table’. Note that this improved analysis is irrelevant for the interpretation of this word as an individualization / substantivation, however.

When the suffix **-ih₂-* is used in adjectives and participles, it always forms derived feminines:

E.g. Skt. *svādú-* (m.) ‘sweet’ → *svādvī-* (f.) (**sueh₂d-u-ih₂-*) ‘id.’

Gr. ἡδύς (m.) ‘sweet’ → ἡδεῖα (f.) (**sueh₂d-éu-ih₂-*) ‘id.’

Skt. *bhárant-* (m.) ‘carrying’ → *bhárantī-* (f.) (**b^hér-ont-ih₂-*) ‘id.’

Gr. φέρων (m.) ‘carrying’ → φέρουσα (f.) (**b^hér-ont-ih₂-*) ‘id.’

On the formal level, formations in **-ih₂-* originally showed ablaut in their suffix as well as in their root, cf. Skt. nom. *devī*, gen. *devyās* ‘goddess’ ~ Gr. nom. *δῖα*, gen. *διῆς* ‘id.’ < nom. **déiu-ih₂*, gen. **diu-iéh₂-s*. Fellner rightly remarks that this fact indicates that **-ih₂-* is an archaic morpheme (2014: 69).

According to Fellner (o.c.: 70–1), the original function of **-ih₂-* was to form feminine possessive nouns derived from other nouns, whereas its usage as a morpheme to form the feminine counterparts of masculine nouns and adjectives is of a later date. This follows from the fact that the feminine adjective Skt. *pīvarī-*, Gr. *πίερα* ‘fat’ < **pīH-uer-ih₂-* is derived from the noun **pīH-ur* ‘fat’ (Gr. *πίαρ* ‘fat’) and not from the masculine adjective Skt. *pīvan-*, Gr. *πίων* ‘fat’ (< **pīH-uen-*). This indicates that the form **pīH-uer-ih₂-* originally was a feminine possessive noun meaning ‘(feminine being) who has fat’, and that it was only later on grammaticalized into forming the feminine counterpart to the adjective **pīH-uen-* ‘fat’ (which originally must have been used for feminine beings as well).

This implies that **-ih₂-* originally was a derivational suffix only that formed nouns referring to feminine beings, and that its use as an agreement marker (forming specifically feminine adjectives that contrast with masculine adjectives) is the result of a more recent development. It should be noted that the first situation (**-ih₂-* as a motion suffix to form nouns referring to feminine beings) does not mean that the language stage in which it occurred knew feminine gender as a grammatical category: as was stated above, the presence of a grammatical feminine gender is defined by the presence of agreement markers that denote feminine gender, *not* by the existence of motion suffixes. The second situation (**-ih₂-* as an agreement marker that forms specifically feminine adjectives) does mean, however, that the language stage in which it occurred knew feminine gender.

The question now arises: is the morpheme *-e* in the Kanišite element *-ašue* to be regarded as a motion suffix or as an agreement marker?

8.4 The Element *-e* in *-ašue*: a Motion Suffix or an Agreement Marker?

At first sight, one might be tempted to view *-e* in *-ašue* as an agreement marker. We have seen in § 5.2.4 that the element *-ašu*, which forms men's names, can be equated to Hittite *āššu-* 'good', which reflects a PIE adjective **h₁óh₁s-u-*.¹⁰²⁹ It therefore is tempting to interpret the element *-ašue*, which forms women's names, as indicating the (former?) existence of a (Kanišite) Hittite form **āššue-*, which would then reflect a feminine adjective **h₁óh₁s-u-ih₂-*. This would then mean that in Anatolian we would have the reflex of an adjective pair consisting of masculine **h₁óh₁s-u-* and feminine **h₁oh₁s-u-ih₂-*, which implies the presence of a feminine agreement system, and therefore of feminine gender as a grammatical category.

If this view were correct, the question would arise why in synchronic Hittite not a single trace of the feminine adjective **āššue* can be found. As we have seen above, the Hittite way to express 'a good lady' is *āššuš išhaššaraš* (nom.sg.), using the form *āššuš* that is also used when talking about 'a good lord', *āššuš išhāš*. If Hittite originally knew feminine adjectives, we would have to assume that 'a good lady' first was expressed by the noun phrase **āššue išhaššaraš*, which, at a certain point in time, was replaced by *āššuš išhaššaraš*. Such a development would fly in the face, however, of the recognition that, from a cross-linguistic point of view, the grammatical category gender "is diachronically extremely stable" (Matasović 2014: 235). Moreover, as we have seen above as well, in the Indo-European languages for which loss or reduction of the gender system can be ascertained, this is due to a large-scale phonological erosion of the word-end, which has caused the loss of the morphological markers for gender, and thus the collapse of the gender system. Such a phonological decay is not present in Hittite, and I therefore do not see why an original feminine adjective **āššue* would not have been retained as such. To my mind, it is unlikely that a Hittite feminine adjective **āššue* ever existed, and I therefore do not think that such an adjective can have been the origin of the Kanišite element *-ašue*.

In order to gain a better understanding of the origin of the element *-ašue*, it is in my view important to realize that personal names grammatically should be regarded as nouns. Therefore, the fact that besides the (unattested) men's

1029 Cf. Kloekhorst 2008: 223–5. Note that the reconstruction of *āššu-* is debated (cf. e.g. Melchert 1994b: 300f. for a different opinion). For the present purpose, the exact reconstruction of *āššu-* is less relevant; what is important is that it certainly goes back to an Indo-European *u*-stem adjective.

name **šupiašu*¹⁰³⁰ we find the women's name *šupiašue*, and the recognition that the latter seems to be derived from the former by the addition of the element *-e*, should be regarded as a matter of derivation at the level of nouns. This means that *-e* should be interpreted as a motion suffix: it is used to derive a noun that refers to feminine beings from an original noun that refers to masculine beings. The fact that the latter part of the source name **šupiašu* originally was an adjective (corresponding to Hittite *āššu*- 'good'), does not have any bearing on the fact that the derivation itself takes place on the level of nouns.

The view that the morpheme *-e* in Kanišite *-ašue* functions as a motion suffix, implies that it can be traced back to the chronological layer in which its precursor, the PIE suffix **-ih₂-*, only functioned as a motion suffix, and had not yet developed into an agreement marker. Since within the Anatolian languages there is no trace of the suffix **-ih₂-* as an agreement marker whatsoever, we may assume that Anatolian split off from the Proto-Indo-European mother language before the suffix **-ih₂-* required its new function as agreement marker. This latter development, the outcome of which can be seen in all other ancient Indo-European languages, may then be viewed as a common innovation of the non-Anatolian branches, which would then constitute an argument in favour of the Indo-Anatolian hypothesis.

1030 Cf. § 5.2.4 for the view that the one attestation of the name *šupiašu* probably is a mistake for *šupiašu<e>*. Nevertheless, I do think it is likely that a men's name **šupiašu* existed at some stage of Kanišite Hittite.

PART 3

The Linguistic Status of Kanišite Hittite

Comparing Kanišite Hittite to Ḫattuša Hittite

After having treated all Kanišite names that could be argued to have a Hittitoid character (271 assured cases and 81 possible cases), it is now time to ask the question: to what extent is the Hittitoid language that these Kanišite names portray equal to or different from the Hittite language as known from the texts from Ḫattuša? As was remarked in § 4.2.4, since the oldest Kanišite Hittite is attested some three centuries earlier than the oldest Ḫattuša Hittite (the Kanišite names stem from texts that date to the period 1930–1720 BCE, whereas the Hittite texts date to ca. 1650–1180 BCE), it is inevitable that we view the two types of Hittite at least as chronologically distinct variants of each other. However, there are to my mind also arguments to be given according to which Kanišite Hittite and Ḫattuša Hittite were not only chronologically distinct, but must have differed from each other in another way as well, i.e. that they were real dialects of each other. Whether these dialectal differences were regiolectal (i.e. caused by the fact that the two varieties were spoken in different areas) or sociolectal (i.e. caused by the fact that the two varieties were spoken by different social classes) is difficult to assess, but is in fact an important issue, since it ties in into the historical relationship between Kaniš and its population and the later Hittite kingdom founded at Ḫattuša (a topic that will be treated in more detail in Chapter 10).

First we need to treat the major linguistic differences between Kanišite Hittite and Ḫattuša Hittite, and discuss of each difference whether it can be chronological, or has to be interpreted as a dialectal one.

9.1 Epenthesis in */sp-/

We have seen that Kanišite names sometimes show an alternation in spelling between *išp-*, *šap-*, and *šup-*, for instance in the name *išpunaḫšu* / *šapunaḫšu* / *šupunaḫšu* (m.).¹⁰³¹ In § 3.2.4, it was argued that such names underlyingly contained a cluster /sp-/ which could be pronounced (or was perceived) in several ways, namely as [sp-], which was spelled *šap-* (with *a* being a ‘dead vowel’), as [səp-], which was spelled *šup-* (with *u* as the result of colouring of

¹⁰³¹ Cf. § 5.3.62.

[ə] because of the adjacent labial sound *p*), or as [əsp-], which was spelled *išp-* (with *i* representing the default epenthetic vowel).

In Ḫattuša Hittite, words that historically started with a cluster */sp-/ are always spelled *išp-*, with an initial *i-*: *išpai-* ‘to be satiated’ < **sph₁-oi-*; *išpānt-* ‘to libate’ < **spond-*; etc. Although the phonemic status of this *i-* has sometimes been questioned (which would mean that underlyingly we are still dealing with /sp-/), there can to my mind be no question about its linguistic reality,¹⁰³² and we should interpret the spelling *išp-* as /isp-/.¹⁰³³

This difference in the treatment of the initial cluster */sp-/ is also visible in the onomastic material. The Kanišite name *išpudaḥšu* / *šupudaḥšu*, which must be analysed as starting in /sp-/, is generally regarded as identical to the Hittite name ^m*išpudaḥšu*, which is always spelled *iš-p*.¹⁰³⁴ This implies that in this name the epenthesis with *i-* had been fixed in Ḫattuša Hittite, in contrast to the situation in its Kanišite variant.

We can conclude that in their treatment of an initial cluster */sp-/ Kanišite Hittite and Ḫattuša Hittite differ from each other: in Kanišite Hittite the cluster is phonologically intact, /sp-/, but can allophonically receive epenthesis, either by adding a prothetic vowel, [əsp-], spelled *išp-*, or by inserting an epenthetic vowel between the two consonants, [səp-], spelled *šup-*. In Ḫattuša Hittite, such clusters had at an earlier stage received a prothetic vowel, which was phonemicized: /isp-/, spelled *išp-*.

However, the difference between Kanišite Hittite /sp-/ and Ḫattuša Hittite /isp-/ can be viewed as a diachronic one: the Ḫattuša Hittite situation could easily have developed from the Kanišite Hittite situation, matching their chronological distribution. This difference therefore cannot in principle be used for arguing that the two varieties should be real dialects of each other.

1032 Thus, with extensive argumentation, also Melchert 2016b: 187–91. Especially his argument that Hitt. *šapikkušta-* / *šepikkušta-* / *šipikkušta-* ‘hairpin, stylus’ displays a real case of a word underlyingly starting in /sp-/ is to my mind decisive for the view that the spelling *išp-* cannot have represented /sp-/. Note, however, that I do not agree with Melchert’s idea that *šapikkušta-* / *šepikkušta-* / *šipikkušta-* is inherited and shows a “rare” outcome of **sp-*. To my mind, we are rather dealing with a loanword (a ‘hairpin; stylus’ could easily be a cultural item that was borrowed), which started in /sp-/ and entered the Hittite language after the development of */sp-/ to *išp-* had run its course.

1033 The phonological interpretation of *i-* as a high central vowel /i/ is my personal opinion (cf. Kloekhorst 2008: 61), but others may rather interpret it as the high front vowel /i/: for the present argument only the phonemic presence of the vowel is relevant.

1034 Cf. footnote 682 for attestations.

9.2 Kanišite Hitt. *-ḥšu(šar)* vs. Ḫattuša Hitt. *ḥaššu(šra)-*

As we have seen extensively in §§ 4.3.1, 5.2.6 and 5.2.7, there can be no doubt that the Kanišite onomastic elements *-ḥšu* and *-ḥšušar* can be equated with the Ḫattuša Hittite words *ḥaššu-* ‘king’ and **ḥaššuš(ša)ra-* ‘queen’ (the latter only attested sumerographically as *MUNUS.LUGAL-ra-*). Nevertheless, there are three differences between the two pairs, which may be used for determining whether Kanišite Hittite and Ḫattuša Hittite were dialects from each other or not. Two of these difference have already been treated.

The first is a semantic one: although the Ḫattuša Hittite words mean ‘king’ and ‘queen’, respectively, these meanings are not evident for the Kanišite elements: especially in a society where the royal pair is considered almighty, it would be remarkable if many people had names that meant ‘... -king’ or ‘... -queen’. As we have seen in § 4.3.1, this difficulty was solved by Laroche (1966: 299–300), who pointed out that on internal grounds it is likely that Ḫattuša Hittite *ḥaššu-* and **ḥaššuš(ša)ra-* may originally have meant ‘descendant, born’, and that these words developed into ‘king’ and ‘queen’ because the Hittite king was regarded “*un primus inter pares, le plus racé des nobles*” (1966: 302). Since then, it is generally assumed that the Kanišite elements *-ḥšu* and *-ḥšušar* denote ‘...-born’, a semantic notion that is indeed very befitting for onomastic elements. In this way, the semantic difference between, on the one hand, Kanišite Hittite *-ḥšu* and *-ḥšušar* ‘... -born’, and, on the other, Ḫattuša Hittite *ḥaššu-* ‘king’ and **ḥaššuš(ša)ra-* ‘queen’ can be viewed as a diachronic one: the Ḫattuša Hittite situation could have developed from the Kanišite Hittite situation, matching their chronological distribution.¹⁰³⁵ This difference therefore cannot in principle be used for arguing that the two varieties should be real dialects of each other.

The second difference is a morphological one: although the Kanišite Hittite element *-ḥšušar* ends in an *-r*, its Ḫattuša Hittite counterpart **ḥaššuš(ša)ra-* (*MUNUS.LUGAL-ra-*) is an *a*-stem. However, as we have seen in § 5.2.7, the *a*-stem inflection of Ḫattuša Hittite **ḥaššuš(ša)ra-* is probably relatively recent: originally it must have been a consonant stem, ending in *-r* as well: **ḥaššuš(ša)r-*. In this way, this difference can be viewed as a diachronic

¹⁰³⁵ Since onomastic elements can retain archaic meanings, also when their lexical counterparts in the real vocabulary have undergone a semantic development, it is not impossible that also in Kanišite Hittite the words *ḥaššu-* and *ḥaššušar* had already developed into denoting ‘king’ and ‘queen’, whereas in onomastics the original meaning ‘...-born’ had been petrified. Since we do not know the word for ‘king’ and ‘queen’ in Kanišite Hittite, this cannot be verified, however.

one: the Ḫattuša Hittite situation could have developed from the Kanišite Hittite situation, matching their chronological distribution. This difference therefore cannot in principle be used for arguing that the two varieties should be real dialects of each other.

The third difference is a phonological one: although the Kanišite Hittite elements *-ḫšu* and *-ḫšušar* do not show a vowel between their *ḫ* and *š*, */hsu(s:r)/*,¹⁰³⁶ Ḫattuša Hittite *ḫaššu-* and **ḫaššuš(ša)ra-* have an *-a-* there, */has:u(s:ra)-/*. There have been several attempts to explain this situation.

According to Bossert (1946: 158), *-ḫšu* is a “verkürzte Aussprache” of Hitt. *ḫaššu-*, but he does not give details on what the reason of this shortening could have been. Laroche (1951: 105; 1966: 301) is more explicit and states that a syncope must have taken place in the period before the oldest texts from Kaniš were written.¹⁰³⁷ In other words, the original sequence **/...-á-h:as:u/* (which through Eichner’s and Morpurgo Davies’ second Lenition Law¹⁰³⁸ would in Proto-Anatolian times have developed into **/...-á-h:asu/*) was syncopated to */...-á-hsu/*, with loss of the unaccented */a/*. As a parallel, Laroche mentions the existence of the Hittite suffix *-umna-*, which, when compared to Kanišite *-uman*, must in his view have developed from an earlier **-uman-a-*, with syncope of the first *a*. However, this latter analysis is false: the Hittite suffix *-umn-a-* can transparently be analysed as a thematicization of *-umn-*, which is the original weak stem of the suffix *-umen-/ -uman-*. The existence of Hitt. *-umna-* is therefore not due to syncope. In fact, in the prehistory of Ḫattuša Hittite, syncope has never taken place.¹⁰³⁹ For instance, a preform like **d^hébb^h-eu-es* yielded Hitt. *tēpa^huaš* /tēpa^huas/, not something like ***/tēpuas/*, with syncope. If the development of Kanišite */...-á-hsu/* from earlier **/...-á-h:as:u/* is

1036 I only know of one attestation of *-ḫšu* spelled *-ḫa-šu*, namely *na-ki-a-ḫa-šu* (kt 91/k 183t: 8; p.c. J.G. Dercksen). However, this one attestation cannot compete with the hundreds of attestations of this element always spelled *-Vḫ-šu* (including *na-ki-aḫ-šu*), which clearly indicate that this element was */hsu/*. Of *-ḫšušar* there are two attestations spelled *-ḫa-šu-ša-ar*, namely *lá-ak-na-an-ḫa-šu-ša-ar* (AKT 10, 42a: 4; AKT 10, 42b: 9 (-<an>-)). In these two forms it is clear that this spelling is caused by the presence of an *n* preceding *-ḫšušar*, since triconsonantal clusters cannot be spelled without the use of a dead vowel. There can therefore be no doubt that *lá-ak-na-an-ḫa-šu-ša-ar* should be interpreted as */laknan-hsus:r/*.

1037 Likewise Puhvel (HED H: 245), who calls *-ḫšu* the result of a “phonetic decay”.

1038 This sound law states that PAnat. **Ÿ...VC:V > *Ÿ...VCV*, with lenition of the fortis consonant between two unaccented vowels in a post-tonic position. Cf. e.g. Kloekhorst 2014: 559–64.

1039 The cases mentioned in Melchert 1994a: 85, 173–2 are either false (syncope in **-ie/o-*) or irregular.

indeed the result of syncope, this must have been a specifically Kanišite Hittite development, which has no parallels in the prehistory of Ḫattuša Hittite.

A different attempt for explaining Kanišite *-ḫšu* was given by Goetze (1954a: 355). In his view, Kanišite *-ḫšu* is not related to Ḫattuša Hittite *ḫaššu-* ‘king’, but should instead be viewed as a *u*-stem formation of the zero-grade of the verbal root as found in *ḫāš(š)-ⁱ* / *ḫašš-* ‘to give birth to; to procreate’, comparable to Indo-European formations like **-sth₂-u-* ‘standing’. Since it nowadays has become clear that *ḫaššu-* ‘king’ itself probably is a *u*-stem derivative of the verbal root underlying *ḫāš(š)-ⁱ* / *ḫašš-*, Goetze’s idea can be paraphrased in the following way: Kanišite Hittite *-ḫšu* does not reflect the full grade *u*-stem noun as attested in Ḫattuša Hittite *ḫaššu-* / *hás:u-* ‘king’ < **h₂éms-u-*, but rather must be viewed as its zero-grade variant. In fact, such a zero-grade variant of *ḫaššu-* < **h₂éms-u-* must certainly have existed at the Proto-Indo-European level, since it is attested in the Avestan cognate *ahu-* ‘lord’ < **h₂ms-u-*. However, when we look at the details of Goetze’s idea, it turns out that it runs into several problems. When this scenario was presented, the prehistory of Hitt. *ḫāš(š)-ⁱ* ‘to give birth to; to procreate’ was not fully clear, and it therefore was unproblematic to think that the zero-grade stem of this verb would have been *-ḫš(š)-*, as found in Kanišite *-ḫš-u*. Nowadays, however, it is generally agreed upon that *ḫāš(š)-ⁱ* reflects the PIE verbal root **h₂ems-*,¹⁰⁴⁰ which means that its zero-grade stem would have been **h₂ms-*. According to the sound laws of Ḫattuša Hittite, **h₂ms-* should have yielded *ḫanz-* / *hənts-/*,¹⁰⁴¹ which means that personal names ending in **...-ó-h₂ms-u* should have ended up as */...-á-h:ənts/*, and not as */...-á-hs/* as we find in Kanišite Hittite. So, if we would want to maintain Goetze’s analysis, we would have to assume that there was a difference between Kanišite Hittite and Ḫattuša Hittite when it comes to the outcome of a sequence **-h₂ms-*: in Kanišite Hittite it would have yielded */-hs:-/*, whereas in Ḫattuša Hittite it yielded */-h:ənts-/*.¹⁰⁴²

1040 Oettinger 1979: 113; Kloekhorst 2008: 319–21. Note that Melchert 1994a: 164 reconstructs the root of this verb as **h₂ens-*, but this does not affect the argument given here.

1041 Cf. Hitt. *ḫanzāšša-* ‘offspring’ < **h₂ms-ósio-* (Kloekhorst 2008: 293, 320–1). Another example of *ḫanz-* < **h₂ms-* may be found in the toponym ^{URU}*ḫanzušra*, which is attested as such in Hittite texts (cf. Del Monte & Tischler 1978: 79), and which, as suggested by Zehnder 2010: 149, may be equated with the toponym that in Old Assyrian texts is attested as *ḫa-zu-ša-ra* (kt g/t 36: 24, cf. Nashef 1991: 55). I would like to propose that ^{URU}*ḫanzušra* reflects **h₂msusró-*, based on the hysterodynamic gen.sg. form **h₂msu-sr-ós* (with zero-grade in the root!) of the noun ‘female descendant > queen’ that in its nominative was **h₂émsu-sr* (with full grade in the root) > */hás:us:r/*.

1042 It must be admitted that synchronically in Ḫattuša Hittite the weak stem of *ḫāš(š)-ⁱ* is *ḫašš-* / *həs:-/* (or */hs:-/?*), which must be an analogical replacement of expected ***/hənts-/* < **h₂ms-*. Such a replacement is understandable in an ablauting verbal paradigm: when

As a third way of explaining the relationship between Kanišite *-ḥšu(šar)* and Ḫattuša Hittite **ḥaššu(šra)-*, one could theoretically think of claiming that the Old Assyrian spelling *-aḥ-šu(-)* does not represent a sequence */-á-hsu(-)/* after all, but should in fact be interpreted as a specifically Old Assyrian way of writing an underlying */-á-h:asu(-)/*. The fact that the */a/* between */h/* and */s/* was not spelled could then, for instance, be linked to the defective nature of the Old Assyrian cuneiform script. Or it could be blamed on the perceptive qualities of the Assyrians: perhaps the unaccented */a/* in */-á-h:asu(-)/* was pronounced so short that the Assyrian scribes just were unable to hear it. However, this explanation falls short as well. The spelling *-aḥšu(-)* is not only confined to names found in Old Assyrian texts, but can be found in Hittite texts from Ḫattuša as well, e.g. *ṁišpudaḥšu-*,¹⁰⁴³ *ṁš[uppiḫ]aḥšu-*,¹⁰⁴⁴ and *ṁtaruḥšu-*.¹⁰⁴⁵ Since these texts are written in the Ḫattuša ductus, by Hittite scribes, there can be no doubt whatsoever that the spelling *-Vḥ-šu(-)* in these names spell a phonological sequence */-hsu(-)/*, in which no vowel between the */h/* and the */s/* was present. The spelling of Kanišite Hittite *-ḥšu(šar)* is thus accurate: there really was no vowel between the *ḥ* and the *š*.

All in all, we have to conclude that the phonological difference between Kanišite Hittite *-ḥšu(šar)* and Ḫattuša Hittite **ḥaššu(šra)-* is real and calls for an explanation. Of the solutions offered, two can be deemed possible.

PIE **h₂óms-ei* / **h₂ms-énti* yielded pre-PAnat. **/hós:ei/*, */hmsánti/* (assimilation of **-ms-* > **/-s:-/* in intervocalic position), the */s:/* of the strong stem spread to the weak stem, causing */hms-/* to be replaced by */hs:-/*. However, as is clear from Hitt. *ḫanzāšša-* < **h₂ms-ósio-*, this analogical replacement of **/hms-/* by */hs:-/* was not extended to the derivatives of this verb, and I therefore do not believe that in the (hypothetical) personal names ending in **...-ó-h₂msu* we may expect a replacement of pre-PAnat. **/...-ó-hmsu/* to ***/-ó-hs:u/*. In an ultimate attempt to save Goetze's idea, we could assume that these personal names were formed not until after the pre-PAnatolian period when the original zero-grade stem **h₂ms-* had been analogically replaced by **/hs:-/*. The pre-PAnat. formation **/...-ó-hs:u/* would then regularly develop into */-áhs:u/* (whether the *š* was geminate or not cannot be seen in the Old Assyrian spelling) as found in the Kanišite names, according to the same sound laws that apply to Ḫattuša Hittite. This would mean that no dialectal difference between the two variants would have to be assumed. However, this scenario is not very likely, since a *u*-stem derivative of the root **h₂ems-* can be securely reconstructed back to Proto-Indo-European (cf. the existence of Av. *ahu-* 'god, lord' < **h₂ms-u-*; ON *áss* 'god' < **h₂ems-u-*). Assuming that in pre-PAnatolian a new, independent *u*-stem formation **/-hs:-u/* would have been created therefore makes no sense.

1043 Cf. footnote 682 for an overview of attestations.

1044 Nom.sg. *ṁš[u²-up-pí-ḫ]a-aḥ-šu-uš* (KUB 31.4 + KBo 3.41 obv. 21) (cf. Goetze 1954a: 354).

1045 Cf. footnote 154 for an overview of attestations.

1. Kanišite *-ḫšu* /-hsu/ and *-ḫšušar* /-hsus:r/ reflect earlier */-h:as:u/ and */-h:as:us:r/, respectively, but in the sequence */...-á-h:as:u(-)/, which first underwent lenition to */...-á-h:asu(-)/, a syncope took place, which caused a development into */...-á-hsu(-)/. This syncope was specifically Kanišite Hittite, however, and did not operate in Ḫattuša Hittite, where we would expect an outcome **/-á-h:asu(-)/.
2. Kanišite *-ḫšu* /-hsu/ and *-ḫšušar* /-hsus:r/ reflect earlier */-h₂ms-u and */-h₂ms-u-sr, respectively, in which the sequence */-h₂ms- developed into /-hs:-/. This development was specifically Kanišite Hittite, however, since in Ḫattuša Hittite the preform */-h₂ms-u(-) would have yielded **/-h:əntsu(-)/, spelled ***-ḫhanzu-*.

It is important that in both scenarios the difference between Kanišite Hittite and Ḫattuša Hittite cannot be explained due to a diachronical difference between the two. In the case of scenario 1, it is impossible that the Ḫattuša Hittite expected outcome **/-á-h:asu(-)/ would have developed from the older Kanišite Hittite form */...-á-hsu(-). Likewise in the case of scenario 2: it is impossible that Ḫattuša Hittite **/-h:əntsu(-)/ would have developed from the older Kanišite Hittite form */...-á-hsu(-). So no matter which option one prefers (and personally, I would certainly opt for scenario nr. 1),¹⁰⁴⁶ the only way to explain the relationship between Kanišite Hittite and Ḫattuša Hittite is by assuming that they were two different dialects of each other, and not only two chronologically different stages of a single language.¹⁰⁴⁷

9.3 Kanišite Hitt. *išpud-* /*šupud-* vs. Ḫattuša Hitt. *išpant-*

In § 5.3.61 above, we have seen that the element *išpud-* /*šupud-* as found in the name *išpudaḫšu* /*šupudaḫšu*, is to be interpreted as /spund-/,¹⁰⁴⁸ reflecting earlier */spnd-/ < PIE */k^wspnt-, the zero grade from the lexeme */k^wspent- ‘night’. In Ḫattuša Hittite, the expected outcome of */k^wspnt- would be /ispənd-/¹⁰⁴⁹

¹⁰⁴⁶ As we have seen in §§ 5.2.10, 5.3.9, 5.3.51, and 5.3.96, syncope may have taken place in other Kanišite Hittite names as well.

¹⁰⁴⁷ Thus also Tischler 1995: 365.

¹⁰⁴⁸ The absence of the /n/ in the spelling of this element is due to the orthographic rules of Old Assyrian, cf. § 3.2.11. As we have seen in § 5.3.45, spellings like *ḫu-mu-un-da-šu* indicate that clusters of the shape /-nd-/ were present in the Kanišite material, and we therefore can reasonably assume that this cluster was present in the element *išpud-* /*šupud-* as well.

¹⁰⁴⁹ Cf. Kloekhorst 2014: 249–50 for the postulation of a /ə/ in original */CRC/ sequences. Note that e.g. Melchert 1994a: 125 postulates that */CRC/ vocalizes with a vowel /a/, yielding

(spelled *iš-pa-an-t°* / *iš-pa-an-d°*),¹⁰⁵⁰ however. The fact that this latter form contains a prothetic vowel /i-/, which is absent in its Kanišite Hittite counterpart /spund-/, could in principle be explained as due to the chronological difference between Ḫattuša Hittite and Kanišite Hittite: the Ḫatt. Hitt. anlaut /isp-/ would then be a younger outcome of Kan. Hitt. /sp-/ (cf. section 9.1). Such a solution does not work for the vowel that both morphemes contain. We have seen in § 5.3.61 that the vocalisation of the nasal in the preform **k^wspnt-* yielded a *u* in Kanišite Hittite, which probably was phonemic: *išpud-* / *šupud-* = /spund-/. In Ḫattuša Hittite, however, the outcome of this vocalisation is spelled *a*, which probably represents a schwa: /ispænd-/.¹⁰⁵¹ The difference between these two cannot be chronological: it is impossible that Ḫatt. Hitt. /ispænd-/ is the regular, younger, outcome of Kan. Hitt. /spund-/. A preform **spund-* should in Ḫattuša Hittite have yielded ***ispund-*, spelled ***iš-pu-un-t°* / ***iš-pu-un-d°*. We therefore must conclude that these two forms belong to two different dialects, which supports our findings of the preceding chapter.

The status of the *u* in the Kanišite Hittite forms *išpud-* / *šupud-* /spund-/ is confirmed by the names *^mišpudaḫšu-* and *išpudašmei*, which are attested in Hittite texts from Ḫattuša and which, as we have seen in § 5.3.61, can be equated with Kanišite *išpudaḫšu* / *šupudaḫšu* and *šupudašmei*, respectively. The initial element of the Hittite names is spelled (^m)*iš-pu-d°*,¹⁰⁵² which, according to the orthographic rules of Ḫattuša Hittite, can be analysed as representing a phonological form /ispud-/, with a real /u/, supporting the phonemicity of the /u/ in Kanišite Hittite /spund-/.

However, there are also differences between the Kanišite and the Ḫattuša names. Although Kanišite *išpud-* / *šupud-* points to /spund-/, the Ḫattuša spelling (^m)*iš-pu-d-* points to /ispud-/, with an initial vowel /i/, and without an /n/ before the /d/. To my mind, the only way to explain this discrepancy, is by assuming that the Ḫattuša names *^mišpudaḫšu-* /ispudáhsu-/ and *išpudašmei* /ispudasmei/ are the younger outcomes of the Kanišite names *išpudaḫšu* /šupudaḫšu /spundáhsu/ and *šupudašmei* /spundasmey/, and that they have undergone the following developments: (1) introduction of the prothetic vowel /i-; and (2) loss of the /n/ in the cluster /-nd-/ (< PIE **-nt-*).

/CaRC/. For the present discussion this is irrelevant, since both /CaRC/ and /CaRC/ would be spelled in Hittite as (-)Ca-aR-C°.

1050 Cf. Kloekhorst 131–9 for the view that PIE **-nt-* yielded in Hittite a cluster of /n/ + lenis /t/, which however was allophonically voiced to [d] in this position (and which was spelled both °n-tV and °n-dV). For the sake of convenience, I will here note this lenis /t/ with the sign *d*, also in my phonemic representations.

1051 Cf. footnote 1049.

1052 Cf. footnotes 681 and 682, respectively.

Although the former of these developments is a well known Hittite sound law (*sT- > išt- /isT-/),¹⁰⁵³ the latter one is unknown in the prehistory of Ḫattuša Hittite: clusters of the shape /-nd-/ (< PIE *-nt-) are always retained as such. This is an important insight, since it means that ^mišpudaḥšu- and išpudašmei, although they are found in Ḫattuša Hittite texts, represent outcomes of the Kanišite names /spundáhsu/ and /spundasmei/ in which a sound law has taken place that is specific to these names and does not belong to Ḫattuša Hittite. We must therefore attribute this development to a dialect different from Ḫattuša Hittite, and we may term that dialect ‘Young Kanišite Hittite’, i.e. the outcome of Kanišite Hittite as portrayed by the personal names from the Old Assyrian texts.

9.4 Kanišite Hitt. *išpun-* / *šapun-* / *šupun-* vs. Ḫattuša Hitt. *išpant-*

Above, in § 5.3.62, it was argued that the Kanišite element *išpun-* / *šapun-* / *šupun-* should be interpreted as /spun:-/, which goes back to *spnd-, the zero grade of the PIE verbal root *spend- ‘to libate’. In Ḫattuša Hittite, the zero grade root *spnd- is attested in e.g. *iš-pa-an-ta-an-zi* ‘they libate’ < *spnd-énti, and we see that here *spnd- has yielded /ispant:-/, spelled *iš-pa-an-t*^o. If this equation between Kanišite *išpun-* / *šapun-* / *šupun-* /spn:-/ and Ḫattuša Hitt. *išpant-* is correct, we have to account for the difference between Kanišite /-n:-/ and Ḫattuša Hitt. /-nt:-/.

In Kloekhorst 2013: 131–9, I treated the outcome of PIE *-nd- in Old Hittite, and argued that it yielded /-nt:-/ (with a fortis stop /t:/), which was pronounced [-nt-], and spelled -n-tV- (i.e., always with the signs TA, TE, TI or TU). It thus contrasts with the outcome of PIE *-nt- and *-nd^h- in Old Hittite, which yielded /-nd-/ (with a lenis stop /d/),¹⁰⁵⁴ which was pronounced [-nd-], and spelled -n-tV- as well as -n-dV- (i.e., both with the signs TA, TE, TI or TU, and DA, DE/I or DU). I have argued that this difference in outcome between PIE *-nd-, on the one hand, and PIE *-nt- and *-nd^h-, on the other, can be linked to the hypothesis that PIE *d originally was a preglottalized consonant, *[ʔt], whereas PIE *t and *d^h were not, *[t] and *[t], respectively. Therefore, the outcome of PIE *-nd- (= *[nʔt-]) in Proto-Anatolian was *[-nʔt-], whereas PIE *nt and *nd^h yielded PAnat. *[-nt-]. In the latter cluster, voice assimilation took place, that lenited the dental stop, yielding Old Hittite /-nd-/ , pronounced [-nd-]. In the former cluster, however, the /ʔ/ blocked the voice assimilation,

1053 E.g. Kloekhorst 2008: 70; cf. also the discussion in section 9.1.

1054 Cf. footnote 1050 for this notation.

yielding OH [-nt-], which phonologically represents /-nt:/ (in which /t:/ is a fortis stop).

In Kanišite Hittite, the outcome of PIE *-nt- seems to be /-nd-/, as can be seen in e.g. *ḫumadašu*. As we have seen in § 5.3.45, this name can be analysed as /hōmand-as:u/, the first element of which reflects a formation in *-ent-. The cluster *-nt- would thus behave the same as in Ḫattuša Hittite. If the interpretation of Kanišite *išpun-* / *šapun-* / *šupun-* / *spun:-* as reflecting **spnd-* ‘to libate’ is correct, it would show that PIE *-nd- yielded /-n:-/. At first sight this may seem very different from the Ḫattuša Hittite outcome, which was /-nt:-/, pronounced [-nt-]. However, if we assume that the Proto-Anatolian cluster *[nʔt-] (the outcome of PIE *-nd- = *[nʔt-]) in the prehistory of Kanišite Hittite first yielded *[-n:t-], it is understandable how this (perhaps through a stage *[-n:d-]?) was simplified to [-n:-]. This scenario requires, however, that Kanišite Hittite and Ḫattuša Hittite treated the Proto-Anatolian cluster *[nʔt-] in different ways. As a consequence, we would have to assume that the two varieties were different dialects, which would support the conclusions of the two preceding sections.

9.5 Two Different Dialects: Kanišite Hittite vs. Ḫattuša Hittite

In the preceding paragraphs we have seen that the Hittitoid analysis of Kanišite personal names indicates that Kanišite Hittite was a variant of Ḫattuša Hittite that is not fully identical to it. In some cases, the differences between the two could be explained diachronically: Ḫattuša Hittite shows a feature that could have developed through time from Kanišite Hittite. This fits the fact that the oldest texts in which the Kanišite names are attested are some 300 years older than the oldest Ḫattuša Hittite texts. However, we have also found some features in which the two variants differ that cannot be attributed to a diachronic difference between the two. These clearly indicate that Kanišite Hittite and Ḫattuša Hittite were in fact two distinct dialects. The difference between the two dialects is showcased best by two personal names, namely Kanišite *išpudaḫšu* / *šupudaḫšu* and *išpunuman* / *šupunuman*. If our interpretation of their initial elements as ‘night’ and ‘libate’, respectively, is correct, we can transpose them into Proto-Indo-European phonemes as follows: **k^wspnt-ó-h₂emsu-* and **spnd-h₂uén-*, respectively. At the Proto-Anatolian level, these two forms would have yielded */spnt:-á-h:as:u-/ and */spnʔt-ʔuán-/,¹⁰⁵⁵ respectively. The

¹⁰⁵⁵ For the development of PIE **d* to PAnat. /ʔt/, cf. e.g. Kloekhorst 2012b: 259; Kloekhorst 2014: 233. The development of **-h₂uén-* > **-ʔuán-*, with /á/, took place before the

next step in their development would have been to */spnd-á-h:asu-/¹⁰⁵⁶ and */spnʔt-omán-/ , the former with the development of PANat. */-nt:-/ > */-nt-/ > */-nd-/,¹⁰⁵⁷ and the latter with the specifically Hittite development of PANat. */CʔuV/ to */ComV/.¹⁰⁵⁸ This stage may be called Proto-Hittite, since it is the last stage from which both Kanišite Hittite and Ḫattuša Hittite can be derived. After this stage, the two dialects each show specific developments.

In Kanišite Hittite, the form */spnd-á-h:asu-/ first undergoes a syncope to */spnd-á-hsu-/,¹⁰⁵⁹ after which the /n/ in the cluster */spnC/ is vocalized to /un/, yielding /spund-á-hsu-/. This name is in Old Assyrian texts written *išpudaḫšu* [əspundáhsu] as well as *šupudaḫšu* [šəpundáhsu]. The form */spnʔt-omán-/ also undergoes the vocalisation of */spnC/ to /spunC/, yielding */spunʔt-omán-/ , after which the cluster */nʔt first yielded */n:t/, and then is simplified to /n:/, resulting in /spun:-omán-/. This name is attested in Old Assyrian texts as *išpunuman* [əspun:omán] and *šupunuman* [šəpun:omán].

In a younger stage of Kanišite Hittite, the forms /spundáhsu-/ and /spun:omán-/ have developed into /ispudáhsu-/ and /ispun:omán-/ , respectively, both with phonemicization of the prothetic vowel /i-/ (which in Old Assyrian times was only optional), and the former with loss of its /n/, which is a specifically Young Kanišite Hittite development. These names are attested in Hittite texts from Ḫattuša as ^m*išpudaḫšu-* and ^m*išpunnuman-*, respectively, but because of their specifically Kanišite phonology they should be regarded as loans from Young Kanišite Hittite into Ḫattuša Hittite.

In Ḫattuša Hittite, we would expect the Proto-Hittite form */spnd-á-h:asu-/ to have developed into /ispənd-á-h:asu-/ , with a prothetic vowel and vocalization of the nasal. This form would have been spelled ^{**}*iš-pa-an-ta-aḫ-ḫa-šu-* or ^{**}*iš-pa-an-da-aḫ-ḫa-šu-*. The Proto-Hittite form */spnʔt-omán-/ would have

nom.sg. ending *-s (*-én-s > PANat. */-án-s/). In the acc.sg., ^{*}*h₂uén-m* would have yielded ^{*}/*-ʔuén-m/, with /e/, and this allomorph is attested in Ḫattuša Hittite (-*umen-*) and Kanišite Hittite (-*umen*) as well. Note that in principle, PIE ^{*}*p* would yield PANat. fortis ^{*}/p:/ . However, it is not clear to what extent the difference between fortis and lenis stops was relevant after ^{*}s, and I therefore write the outcome of PIE ^{*}*sp-* as PANat. /sp-/.

1056 With lenition of the ^{*}/s:-/ of ^{*}/*-á-h:as:u-/ to ^{*}/s-/ because of Eichner's and Morpurgo Davies second Lenition Law, PANat. ^{*}Ÿ...VC:V > ^{*}Ÿ...VCV.

1057 Kloekhorst 2013: 137. Cf. footnote 1050 for the use of the sign /d/ for the lenis dental stop.

1058 Kloekhorst 2008: 914–5. Note that in the Luwic branch, the suffix ^{*}*h₂uén-* > PANat. ^{*}/*-ʔuén- developed into PLuw. ^{*}*-uén:(i)-* (with Čop's Law and *i*-mutation), which eventually yielded Luw. *-uann(i)-*, Lyc. *-ñn(i)-*, Mil. *-wñn(i)-*.

1059 Although *a priori* one could expect that a syncope of ^{*}/*-á-h:asu-/ should yield ^{*}/*-á-h:su-/ , with a fortis /h:/, in spelling no sign of a fortis /h:/ can be seen. We may therefore assume that in the cluster the fortis /h:/ lost its length.

yielded */ispəntː-omán-/ (with /-ntː-/ = [-nt-]),¹⁰⁶⁰ which would have been spelled ***iš-pa-an-tu(-u)-ma-an-*. Although both names are unattested in Ḫattuša Hittite, our knowledge of the historical phonology of this language is extensive enough that we can be sure that these forms would have looked this way.

Our conclusion is clear: Kanišite Hittite and Ḫattuša Hittite are variants of each other, but not all their differences can be explained diachronically, which means that the one cannot have been the younger version of the other. Instead, the two variants are real dialects in the sense that both derive independently from an ancestor that we may term Proto-Hittite. Their relationship can therefore be schematized as follows (in grey blocks the language stages that are directly attested):

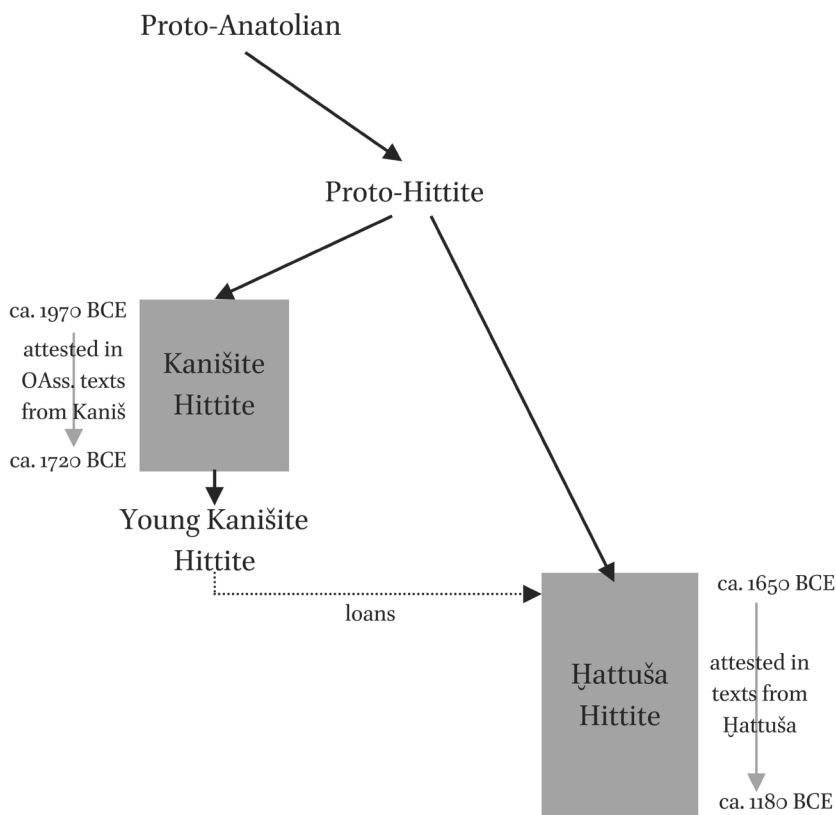

FIGURE 1 Schematic overview of the development of the two Hittite dialects

¹⁰⁶⁰ Cf. Kloekhorst 2013: 131–9.

It should be noted that a distinction between Kanišite Hittite and Ḫattuša Hittite need not only be relevant in the treatment of personal names, but may have consequences for the judgement of real lexemes as well. In § 5.3.62, we came across the Ḫattuša Hittite word ^{LÚ/MUNUS}*išpunnala-*, which denotes a cult functionary. Although the exact meaning of this word is unclear, in one context the term ^{LÚ}*išpunnala-* refers to a person who provides a ritually pure place for the king and queen to wash their heads. It was therefore argued that the stem of this word, *išpunn-*, may be related to the Kanišite Hittite stem /spun:-/, which in this book has been proposed to derive from the PIE verbal root **spnd-* ‘to libate’. If this connection is correct (and I am aware that there are still many uncertainties), this would mean that ^{LÚ/MUNUS}*išpunnala-* forms a Kanišite Hittite loanword that at a certain moment in time has entered the Ḫattuša Hittite lexicon.

Two Hittite Dialects: Historical Reality

The linguistic realization that Kanišite Hittite and Ḫattuša Hittite form two closely related but nevertheless distinct dialects brings about the question what the historical relationship between these two dialects may have been, and how this can be linked to the historical ties between the two cities where these varieties were spoken, Kaniš and Ḫattuša. In order to provide an answer it is crucial to investigate in detail the origin of the Hittite language in Ḫattuša.

10.1 The Language Situation in Ḫattuša in the Early 2nd Millennium BCE

Although it is difficult to say anything with certainty about the ethno-linguistic make-up of Anatolia before 2000 BCE, there are good reasons to believe that the city of Ḫattuša and its surrounding area, the ‘Land of Ḫatti’ (usually seen as corresponding to the region encompassed by the Maraššanta River = classical Halys, modern-day Kızıl Irmak),¹⁰⁶¹ were originally in essence Hattic-speaking.¹⁰⁶² First, the root *ḫatt-* as found in the names Ḫattuša and Ḫatti is clearly identical to the element *ḫatt-* as found in *ḫattili*, the Hittite word that designates the Hattic language (and from which our word ‘Hattic’ derives). Second, Singer (1981: 120–5) states that local cult deities as attested for towns within this area show Hattic names (as opposed to local cult deities that belong to towns south of the Maraššanta River, which show Hittite names). We may therefore safely assume an original Hattic character of Ḫattuša, and that the language originally spoken in Ḫattuša, both in the streets and at court, was Hattic.

Nevertheless, as is clear from the extensive royal archives of the Hittite kingdom, as excavated at Ḫattuša from 1906 onwards, during the times of the kingdom, i.e. from ca. 1650–1180 BCE, the main language spoken at (the court of) Ḫattuša was Hittite. This implies that at a certain point in time Hittite was introduced into the city as its new primary language, replacing the Hattic of

1061 Kryszewski (2015) has convincingly argued, however, that in Hittite texts the Akkadian phrase KUR URUḪATTI equals the Hittite phonetic term URUḫattuša-, and that no distinction between the city itself and the encompassing region existed: the two terms can be used for both.

1062 But cf. § 10.3.9 for the possible (ethno)linguistic make-up of Ališar / Amkuša.

earlier times. The question now is: when did this language shift take place and from where was Hittite introduced?

10.2 Dating the Hattic-Hittite Language Shift in Ḫattuša

For determining when in Ḫattuša the language shift from Hattic to Hittite may have taken place we have to dive into the historical facts surrounding its establishment as the capital of the Hittite kingdom, but also the period just before this.

10.2.1 *The Destruction of Ḫattuša by Anitta*

A key document for this latter period is the so-called Anitta-text (CTH 1), which is attested on several clay tablets found at Ḫattuša, and which is arguably one of the oldest compositions in its archives.¹⁰⁶³ The text is composed by a man called Anitta, who tells how his father Piṭḫāna, king of Kuššara, attacks Kaniš (in this text referred to with its Hittite name, Neša) and becomes its new king. When Anitta succeeds his father, he conquers substantial areas of Anatolia, creating a large kingdom with Kaniš as its capital. The historical reality of these persons is confirmed by the fact that Piṭḫāna and Anitta are attested in Old Assyrian texts as kings of Kaniš: according to the newest insights into the chronology of the Old Assyrian period, their reigns can be dated to approximately 1750–1725 BCE.¹⁰⁶⁴

One of the cities that Anitta conquers during his campaigns is Ḫattuša, about which he says (KBo 3.22 rev. 47–51):

- (47) ... š=an išpandi
 (48) nakkit dāḫḫun pēdi=šši=ma Z.Ā.AḪ.LI-an anie[nun]

 (49) kuiš ammel āppan LUGAL-uš kišar[i]
 (50) nu ^{URU}ḫattušan āppa ašāš[i]
 (51) n=an nepišaš ^dIM-aš ḫazziē[ttu]

'I took it at night with force, and on its site I planted weeds. Whoever after me will become king and will resettle Ḫattuša, may the storm-god of heaven strike him!'

¹⁰⁶³ Cf. Neu 1974 for an edition of this text.

¹⁰⁶⁴ Cf. Barjamovic, Hertel & Larsen 2012: 40 for this dating.

Anitta's statements that he planted weeds on the site and that the city should not be resettled again implies that the destruction of Ḫattuša was large-scale, perhaps even total. According to Klengel (1999: 31), this passage may be connected to the archaeologically attested burnt layer that ended level VI of Ḫattuša, and which "sowohl auf Büyükkale als auch in der Unterstadt festzustellen ist. Demnach wurde nicht nur der Fürstensitz niedergebrannt, sondern es fand auch die aA [= altassyrische] Niederlassung der Zeit Kārum Kaniš Ib ein Ende". On the basis of Old Assyrian sources, the destruction of Ḫattuša by Anitta may be dated to ca. 1728 BCE.¹⁰⁶⁵

10.2.2 *The Rebuilding of Ḫattuša*

Some time after this destruction, Ḫattuša is resettled and even made into the capital of the kingdom that we nowadays know as 'Hittite'. From the early years of Hittitology onwards, it was taken for granted that it was Ḫattušili I, originally ruler of Kuššara (cf. § 10.3.4), who rebuilt Ḫattuša and moved his court there.¹⁰⁶⁶ Not only is he the first Hittite king who assuredly ruled at Ḫattuša and from whom written documents are known, it was also generally assumed that he took his throne name Ḫattušili (his birth name being Labarna) as a commemoration to this establishment of Ḫattuša as the new capital of his kingdom. Since Ḫattušili I's ascension to the throne is usually dated to ca. 1650 BCE, this would mean that Ḫattuša had laid in ruins for more than 75 years.

Not all parts of this view can nowadays be upheld, however. Both Sørenhagen (1998: 83³⁹) and Beal (2003: 22–5) have argued that the Zalpa-text (CTH 3.1)¹⁰⁶⁷ contains evidence that Ḫattuša had been resettled already before the times of Ḫattušili I. Within the historical part of the Zalpa-text, three kings are mentioned that undertake campaigns against Zalpa: "the King", "the old King", and "the grandfather of the King". As Beal convincingly argues (*loc.cit.*) these kings may be identified as follows: (1) "the King" = Ḫattušili I; (2) "the old King" = Ḫattušili I's predecessor Labarna I, who was the husband of Ḫattušili I's aunt Taḫananna (the sister of Ḫattušili I's father); and (3) "the grandfather of the King" = Labarna I's predecessor Ḫuzziya I,¹⁰⁶⁸ the father of

¹⁰⁶⁵ Kryszat 2008b: 207, followed by e.g. Barjamovic, Hertel & Larsen 2012: 39 ("a date immediately prior to 1730 BC").

¹⁰⁶⁶ First formulated by Forrer (1926: 6*, 11*), and still found in e.g. Klengel 2011: 32. Cf. Beal 2003: 24⁶⁵ for an overview of references in favour of this view.

¹⁰⁶⁷ Cf. Otten 1973 for an edition.

¹⁰⁶⁸ Cf. Diñçol e.a. 1993: 104–6 for a discussion of the evidence from the 'cruciform seal' in combination with the Offering Lists to Royal Ancestors (CTH 661) which indicates that the predecessor of Labarna I, and thus the grandfather of Ḫattušili I, was called Ḫuzziya. De Martino (2016: 19–20) calls this man 'Ḫuzziya I', which I have taken over. Note that Beal (2003: 31–5)

his wife Taḡananna, and thus the grandfather of Ḫattušili I.¹⁰⁶⁹ Since the Zalpa-text narrates how these three kings undertake their campaigns against Zalpa using Ḫattuša as their point of departure, Beal concludes that Ḫattuša “was not rebuilt by Ḫattušili, but was already thriving much earlier and was already a capital under Ḫattušili’s grandfather” (2003: 25).¹⁰⁷⁰ As Beal points out, this is in fact supported by archaeological evidence: according to Neve, “die Wiederaufbau Ḫattušas [ist] bald nach dem Ende der Karum-zeitlichen Siedlung [...] erfolgt”, which means that there was not “eine Generationen währende Unterbrechung in der Besiedlung Ḫattušas” (Bittel e.a. 1984: 89). According to Beal (*ibid.*), there may have been “less than a generation intervening” the destruction of Ḫattuša and its rebuilding.

Taking the average time span of a generation as 25–30 years, we may then assume that some 20–25 years after the destruction by Anitta (ca. 1728 BCE) the resettlement of Ḫattuša was executed, i.e. around 1710–1705 BCE. Moreover, since the distance between Ḫattušili I and his grandfather Ḫuzziḫa I is two generations, we may assume that the latter ascended the throne some 50 to 60 years before Ḫattušili I did, i.e. around 1710–1700 BCE. This would fit perfectly with Neve’s dating of the rebuilding of Ḫattuša. Since both in the ‘cruciform seal’ (Dinçol e.a. 1993) and in the Offering Lists to the Royal Ancestors (CTH 661; more specifically KUB 36.121 obv. 1–3) Ḫuzziḫa I is the first to be mentioned in a list of early Hittite kings (thus Dinçol e.a. 1993: 104–6), it stands to reason to assume that it indeed was he who rebuilt Ḫattuša.¹⁰⁷¹

10.2.3 *A New Royal Family, a New Language*

In view of the relatively short time that has passed between Ḫattuša’s destruction (ca. 1728 BCE) and rebuilding (around 1710–1705 BCE), one may now ask to what extent it is possible that Ḫattuša’s rebuilder Ḫuzziḫa I was a member of the royal family that ruled over Ḫattuša prior to its destruction by Anitta, and that he thus continued the original Ḫattušan dynasty. The answer to this question is very likely a negative one. In sections 10.3.2–10.3.6, we will discuss several arguments that link the early members of the Hittite royal family to the Kanišite rulers Piṭḫāna and Anitta, and suggest that Ḫuzziḫa I and his successors settled Ḫattuša from Kaniš. There can thus hardly be any doubt that they

assumes the presence of one or two kings (a Tuṭḫaliḫa and possibly a PU-Šarruma) between Labarna I and this Ḫuzziḫa, but cf. Forlanini (2010: 116¹⁰, 117–8, with note 18) for a refutation of this view.

1069 Likewise, but less extensively, Sürenhagen *l.c.*

1070 Likewise Sürenhagen (1998: 83³⁹): “Die seit E. Forrer [...] weitverbreitete Annahme, daß Hattusili I. der Gründer der neuen Hauptstadt gewesen sei, [...] wäre dann aufzugeben”.

1071 Thus also Barjamovic, Hertel & Larsen 2012: 51.

did not continue the original line of rulers of Ḫattuša prior to its destruction by Anitta. I therefore assume that the destruction of Ḫattuša and its subsequent rebuilding involved a change of power: from that moment onwards a new royal family reigned over Ḫattuša, and even made this city into the capital of their kingdom, which we nowadays refer to as Hittite. To be certain, it is not necessarily the case that already from its resettlement onwards Ḫattuša had the status of the kingdom's capital (as e.g. Beal 2003: 25 has it). In fact, Martínez (2016) has recently argued that several passages in the Zalpa-text indicate that at the times in which this narrative is situated (i.e. during the reigns of “the grandfather of the King” = Ḫuzziya I and “the old King” = Labarna I) Ḫattuša was in fact *not* the capital of the Hittite kingdom, but merely served as a “forward operating base” in the campaigns against Zalpa (o.c.: 180). In Martínez' view, the old idea that the Hittite court was moved to Ḫattuša by Ḫattušili I therefore remains valid.¹⁰⁷²

Whether the court at Ḫattuša was already established by Ḫuzziya I himself when he rebuilt the city around 1710–1705 BCE, or only at a later moment, by one of his successors (at the latest by Ḫattušili I, around 1650 BCE), is of less importance for the present discussion. It is important, however, to realize that the rebuilding of a city that at that point in time for the larger part must have been in ruins, and the subsequent establishment of a royal court there, by members of a new ruling family who originally were not from the city itself, must undoubtedly have included the introduction of a large number of workers, personnel and officials moving into the city along with this family. Especially the court at Ḫattuša's Büyükkale must from this moment onwards have housed people that for the largest part originally were not from Ḫattuša but must have come along with the new royal family.

This relatively large repopulation of Ḫattuša and the establishment of a new royal court by people who were not original to the city may well have caused a language shift. It therefore stands to reason to assume that it was during this period (ca. 1710–1650 BCE) that Hittite was introduced as a new language in Ḫattuša, especially at court, but probably also in the streets of the lower town, and quickly took over the position of primary language at the cost of the town's original main language, Hattic.¹⁰⁷³

¹⁰⁷² Although Martínez himself argues that Ḫattušili I moved his court to Ḫattuša from Ḫurma: in his view, Ḫurma had been chosen as the capital by Labarna I, who initially ascended the throne in Kaniš, where the Hittite court was located under his father-in-law Ḫuzziya I. See Kloekhorst fthc.b, however, for a different scenario.

¹⁰⁷³ This does not mean, of course, that the language shift was total. Cf. Soysal 2004: 8–10 for the status of Hattic within Ḫattuša and the rest of the land of Ḫatti during the Hittite kingdom period.

10.3 The Place from Where Hittite Was Introduced into Ḫattuša

Having determined the likely moment at which Hittite was introduced into Ḫattuša, the remaining question is: from where did this language come? Since in the preceding sections it was argued that Hittite was probably introduced into Ḫattuša by the early Hittite kings Ḫuzziya I, Labarna I and Ḫattušili I who rebuilt the city and (eventually) established their court there, we may rephrase this question as: from where did these kings come?

As we will see below, all evidence points to Kaniš as the place of origin of these early Hittite kings, and thus as the place of origin of the Hittite language. This idea is not new. As Gilan (2015: 200–1) states, “obwohl ihre Ansichten über die genaue Natur und Qualität dieser Verbindung weit voneinander abweichen, gehen viele Hethitologen von einer Art Kontinuität zwischen der Kuššara-Dynastie von Piṭḫāna und Anitta und dem hethitischen Königshaus aus”. Gilan himself is rather sceptical about a connection between the Hittites and Kaniš, however (*ibid.*: 194–201).¹⁰⁷⁴ I disagree with him, and will in the following therefore treat the arguments in favour of a connection between the early Hittite kings and Kaniš (§ 10.3.2–6), as well as discuss the arguments that Gilan provides against such a connection (§ 10.3.7). Before doing so, however, it may be worthwhile to first give a short overview of the history of Kaniš in the period preceding the establishment of the Hittite kingdom.

10.3.1 The History of Kaniš in the 18th–17th Century BCE

Although the Old Assyrian texts found in Kaniš offer only glimpses into the lives of the local population of Kaniš and their social structure, we can reconstruct with some certainty the political history of Kaniš in the 18th century BCE.¹⁰⁷⁵ Prior to 1790 BCE, Kaniš was ruled by a king called Ḫurmili. He may have been succeeded by a king called Paḫanu, about whom not much is known, and who may have ruled for a short time only.¹⁰⁷⁶ He was succeeded by the kings Inar (ruling ca. 1790–1775 BCE) and Waršama (ruling ca. 1775–1750 BCE), respectively, whom we know to have been father and son. Around 1750 BCE, Piṭḫāna, king of Kuššara, conquers Kaniš and takes over power. He is succeeded by his son Anitta, the author of the so-called Anitta-text (which was found in the archives of Ḫattuša: CTH 1).¹⁰⁷⁷ From this text, we know that during his reign

¹⁰⁷⁴ Note however that Gilan is interested in the origin of the Hittite *ethnicity*, which, to be fair, is a different question than the origin of the Hittite language.

¹⁰⁷⁵ Barjamovic, Hertel & Larsen 2012: 35–40.

¹⁰⁷⁶ Cf. Günbatt 2014: 112–9; Larsen 2015: 32.

¹⁰⁷⁷ Cf. Neu 1974 for an edition of this text.

Anitta goes on several campaigns, against e.g. Ḫattuša, Zalpuwa and Šalatiwara, and thus expands his kingdom to an extent that he even acquires the status of Great King (LUGAL GAL). The last Kanišite king whose name is attested in the Old Assyrian texts is Zuzu,¹⁰⁷⁸ who must have succeeded Anitta around 1725 BCE. Unfortunately, not much is known about him, nor about his relationship to his predecessor. Interestingly, on kt 89/k 369, Zuzu uses the title LUGAL GAL *a-la-aḫ-zi-na* ‘Great King of Alahzina’, which has prompted e.g. Kryszat (2008b: 210) to state that Zuzu may not have been a son of Anitta’s, but is more likely a usurper from outside Kaniš. However, since the toponym Alahzina is not attested anywhere else in the Old Assyrian corpus, it is difficult to value this title. Moreover, on the basis of the phrase *a-ni-ta ru-ba-e ša a-ku-wa* (OIP 27, 1: 1–2) ‘Anitta, king of Amkuwa’ (read thus by Kryszat 2008b: 196–200), we may conclude that Anitta could use different titles according to which town within his kingdom he was present at that moment for performing administrative duties. The fact that Anitta’s successor Zuzu occurs with the title Great King of Alahzina on a single tablet only therefore may mean nothing more than that Alahzina at that moment was a part of the Kanišite kingdom, and that Zuzu had sealed this tablet there (although it is excavated at Kaniš). I therefore do not see pressing arguments to view Zuzu as someone who conquered Kaniš. Moreover, as far as I am aware, there are no archaeological traces pointing to a hostile takeover of the city in this period.

The last dated text found in Kaniš dates to 1717 BCE,¹⁰⁷⁹ and according to Barjamovic, Hertel & Larsen (2012: 51), Zuzu’s reign could well have lasted beyond that year. The archaeological level from which this last dated text stems, Lower Town level 1b, was destroyed by a fire, which must thus be dated to after 1717 BCE. After this destruction, the lower town was quickly rebuilt: the subsequent level 1a “appears to have followed directly upon the destruction by fire of the houses in level 1b” (Larsen 2015: 40). Although no texts have been found in this layer (yet?), and although there are “indications of a decreasing level of prosperity”, there are reasons to believe that also during level 1a “at least some foreign travellers and traders still came to the city” (Barjamovic, Hertel & Larsen 2012: 52).

¹⁰⁷⁸ Cf. Kryszat 2000: 207–8.

¹⁰⁷⁹ This text, kt 01/k 207 (Günbattu 2008) contains an eponym list (KEL G) that encompasses the period REL 111 = 1862 BCE to REL 255 = 1718 BCE (cf. Barjamovic, Hertel & Larsen 2012: 92–7), and this tablet is therefore dated by Barjamovic, Hertel & Larsen (e.g. 2012: 40) to 1718 BCE. However, as Jan Gerrit Dercksen points out to me, since the tablet itself “is dated to the month of Ab šarrānum, in the year following that of Anāk(u)-ina-Aššur, which is the last eponym in the list” (Günbattu 2008: 111), it in fact stems from 1717 BCE.

The end date of Lower Town level 1a is not fully clear. As Kulakoğlu (2008: 18) states, initially “the length of the period that elapsed from the Assyrian Trading Colonies Period to the beginning of the Old Hittite Kingdom Period [...] was [...] considered to have been very long”, but, in the light of new evidence, “the hiatus from the [...] abandonment of Kültepe to the Old Hittite Kingdom Period diminishes”. Based on stylistic analyses of seals, Emre (1995: 183; 1999: 45) suggested that “layer 1b and especially layer 1a continued [...] into the reigns of Abi-ešuh and Ammi-ditana”, who ruled in Babylon from 1711–1684 BCE and 1683–1640s BCE, respectively. Kulakoğlu himself therefore recently stated that “it would seem that all of Kültepe, both the mound and the lower town, were totally evacuated at some point after 1650 BC” (2014: 87).

When it comes to Kültepe’s mound, the archaeological facts are not always easy to interpret. On the mound, remnants of two palatial structures have been found. The youngest of these, the ‘Late Palace’ (also ‘Waršma’s Palace’), was built on top of the Old Palace that had been destroyed by fire. In the construction of the Late Palace timber was used that, as we know from dendrochronological studies, was cut in 1835/32 BCE.¹⁰⁸⁰ Also this palace was destroyed by fire, but the exact date of this destruction is unclear. The last dated object known from Kültepe’s mound is the so-called Anitta dagger (see also § 10.3.3), which must date to the reign of Anitta (ca. 1740–1725 BCE), and thus provides a *terminus post quem* for the fire that destroyed the mound. It is usually thought that the destruction of the mound is contemporaneous with the fire that destroyed Lower Town level 1b (after 1717 BCE), cf. e.g. Özgüç (1999: 134): “the palace and the town of Karum level 1b were destroyed and abandoned due to the same conflagration”. Moreover, Özgüç states that after this destruction, “[o]n the mound of Kaniš, [...] no new palace, fortifications or large buildings were constructed, but the entire citadel turned into a heap of ruins” (1999: 136).¹⁰⁸¹ However, since shortly after the destruction of level 1b the lower town was rebuilt and seems to have been in use as a place for trading activities for probably more than half a century, we would expect the presence of a functioning administration and therefore of governmental buildings. It therefore cannot be excluded that we should disconnect the destruction of Kültepe’s mound from the burning down of Lower Town level 1b, and assume that the Kanišite palace was still intact during the period of level 1a.

¹⁰⁸⁰ Barjamovic, Hertel & Larsen 2012: 29.

¹⁰⁸¹ Likewise Barjamovic, Hertel & Larsen 2012: 51: “no major governmental building at Kültepe appears to be contemporary with the 1a stratum [which succeeded level 1b, A.K.]”.

With this background knowledge, we may now turn to the arguments that point to Kaniš as the place of origin of the early Hittite kings, and thus of the Hittite language.

10.3.2 *Argument 1: Hittite Is Called ‘Nešite’*

An important piece of information for answering the question from where the Hittite language was introduced into Ḫattuša is the fact that the Hittites call their own language ^{URU}*nišili*, *nāšili*, *nešumnili*, *kanišumnili* ‘in Nešite; in the language of the people of Nēša /Kaniš’ (with Nēša being the Hittite name of Kaniš).¹⁰⁸² This indicates that they themselves saw their language as originating from Kaniš.¹⁰⁸³

10.3.3 *Argument 11: The Presence of the Anitta-text in Ḫattuša*

Another important piece of information is the presence of the Anitta-text in the archives of Ḫattuša. Although Anitta undoubtedly was born and raised in Kuššara, where his father Pitḫāna was king, it is clear from the Anitta-text that after his father conquered Kaniš and, later on, he succeeded his father, he used Kaniš as the capital of his kingdom. This is archaeologically supported by a bronze dagger that in the 1950s was found on the Kültepe mound containing the inscription É.GAL *a-ni-ta ru-ba-im* ‘(property of) the palace of king Anitta’.¹⁰⁸⁴ With Kaniš being the seat of Anitta’s kingship, there can be no doubt that the Anitta-text¹⁰⁸⁵ was composed and recorded there.¹⁰⁸⁶ The fact that this originally Kanišite composition was present in the Hittite archives at Ḫattuša, implies that at a certain point in time it was transferred from Kaniš to Ḫattuša. Although it is unclear in what form exactly, one or more physical objects¹⁰⁸⁷

¹⁰⁸² Cf. CHD L–N: 454. The word *kanišumni*[*li*] is attested in KUB 41.14, 8.

¹⁰⁸³ Thus also Gilan (2015: 198), who states, however, that “[d]ie Bezeichnung „nesisch“ zunächst einmal nur [zeigt], dass die „Hethiter“ den Ursprung ihrer Sprache in diese Gegend sahen, nicht aber notwendigerweise, dass sie selbst von dort stammten. Sprache ist nicht zwangsläufig ein Kriterium für ethnische Identität”. Although I agree with this latter statement, I do think that the early Hittite kings themselves originated from Kaniš as well, cf. the following sections.

¹⁰⁸⁴ Balkan 1955: 78.

¹⁰⁸⁵ Or rather the two or possibly three different compositions that later on were joined into a single text, cf. Steiner 1984, Carruba 2001.

¹⁰⁸⁶ It is unclear, however, in which language, on what medium and in which script. Was it recorded in Old Assyrian, written in the Old Assyrian variant of the cuneiform script on a clay tablet? Or was it written in Hittite, on wooden documents in the Anatolian hieroglyphic script? Cf. Waal 2012 for convincing arguments that the latter type of documents much have existed in Kaniš during the *kārum*-period.

¹⁰⁸⁷ The theory that the Anitta-text was transferred from Kaniš to Ḫattuša orally (e.g. Carruba 2001: 68–9) seems impossible: the text contains too many pieces of detailed information.

containing this composition must at a certain point have been taken from Kaniš to Ḫattuša. Moreover, in Ḫattuša the text was not only archived, but underwent maintenance as well: in younger times copies of it were made. This implies a peaceful transfer of (a part of) an archive¹⁰⁸⁸ from Kaniš to Ḫattuša, which must have been a deliberate choice by one of the early Hittite kings.

10.3.4 *Argument III: Ḫattušili I and Kuššara*

Already from the early years of Hittitology onwards, attention has been paid to the fact that Ḫattušili I has a close connection with the city of Kuššara: at the beginning of the Hittite version of his Annals (KBo 10.2 i 1–2), Ḫattušili I not only calls himself LUGAL.GAL [LUGAL KUR ^{URU}ḪATT]I ‘Great King, King of the Land of Ḫatti’, but also LÚ ^{URU}KUŠŠAR ‘man of Kuššara’,¹⁰⁸⁹ and when Ḫattušili I at the end of his life becomes ill and calls the council of elders together to deliver his political testament, announcing that he has chosen Muṣili to be his heir, he does so in Kuššara.¹⁰⁹⁰

These facts have often been interpreted as indicating that Kuššara was Ḫattušili’s original capital before he moved his court to Ḫattuša.¹⁰⁹¹ This would be remarkable, because Kuššara is also the city that originally was the seat of Piṭḫāna’s kingship and from where he conquered Kaniš. It has therefore often been assumed that Ḫattušili I is a descendant of the same Kuššaran dynasty to which Piṭḫāna and Anitta belonged.¹⁰⁹²

This view has been contested, however. For instance, Sørensen (1998: 83³⁹) states that LÚ ^{URU}KUŠŠAR “auch ‘Herr von Kussar’ im Sinne eines Lehns-trägers bedeuten kann” and therefore need not be interpreted as a “Hinweis auf [Ḫattušili I’s] dynastische Herkunft”. Moreover, Klengel states that the fact

Cf. also Wilhelmi 2016. I plan to discuss my views on the transmission of the Anitta-text from Kaniš to Ḫattuša at another occasion.

1088 To my mind, there may have been more compositions by Anitta that ended up in the archives of Ḫattuša, e.g. the instruction text from KBo 22.1. I will discuss this idea elsewhere, however.

1089 This self-designation is only found in the Hittite version of the Annals, not in its Akkadian version, and it is therefore sometimes seen as a Neo-Hittite introduction into the text (cf. De Martino 2003: 30⁷⁵, with references). Nevertheless, since this designation of Ḫattušili I as ‘man of Kuššara’ is also found in later genealogies (cf. Klengel 1999: 35), there can be no doubt that it reflects an authentic phenomenon.

1090 Cf. the colophon of Ḫattušili I’s Political Testament (CTH 6), which reads (in Akkadian): (1) ... *inuma* (2) LUGAL GAL *tabarna ina* ^{URU}*kuššar*^{KI} *imrašsuma* TUR-am ^{mu}*[ršili]* (3) *ana* LUGAL-*rutim uwaru* ‘When the Great King, Tabarna, fell ill in Kuššara and appointed young Mu[ršili] towards kingship’ (e.g. Gilan 2015: 83).

1091 E.g. Klinger 1996: 123; Klengel 2011: 32; De Martino 2016: 22.

1092 E.g. Bryce 2005: 62.

that Ḫattušili I's political testament is announced in Kuššara "bedeutet allerdings nicht, daß Kuššar damit als Ursprungsort der Dynastie gelten muß oder sein Sterbeort war" (1999: 36¹⁰).

To my mind, such opinions are on the minimalistic side. The fact that Kuššara belongs to Hattušili I's kingdom and apparently occupies some special status, implies that it was more than just one of the cities under his rule. It therefore seems cogent to consider the possibility that he may have been born there, or that it played some other important role in his life.¹⁰⁹³ If it indeed was his place of birth, Kuššara must have been a part of the Hittite kingdom from at least ca. 1680 onwards, maybe even earlier (depending on Ḫattušili's age when he ascended the throne). This is only some 45 years (or even less) since the reign of Anitta (end date ca. 1725 BCE), about whom there can be no doubt that his kingdom included Kuššara as well.

Of course, it cannot be fully excluded that in the years between the reigns of Anitta and Ḫattušili I a change of power in Kuššara had taken place, which would mean that there is no necessary link between the family of Ḫattušili I and the family of Piḫāna and Anitta. The self-designation of Ḫattušili I as 'man of Kuššara' does not therefore constitute absolute proof for a connection between the early Hittite kings and Kaniš. Nevertheless, in combination with the two arguments treated in the preceding sections, I would regard this fact as suggestive at least.

10.3.5 *Argument IV: the Role of Kaniš in the Zalpa-text*

As is well known, the Hittite Zalpa-text (CTH 3.1)¹⁰⁹⁴ consists of two parts, a mythological and a historical one. The mythological introduction describes how once upon a time the Queen of Kaniš gave birth to thirty sons at once. She is so startled by this event, however, that she decides not to keep them. She places the boys in baskets on the river, which carries them to the city of Zalpa where they are raised by the gods. Later on, when the years have passed, the thirty princes go search for their mother and eventually find her in Kaniš. Through divine intervention, the Queen does not recognize the thirty princes as her sons, however, and she offers them to marry her thirty daughters. But also the princes do not recognize that these girls are in fact their siblings; only the youngest prince is aware of this, and he warns his older brothers that they are about to marry their own sisters. Unfortunately, at this point in the story the text breaks off, and also the following paragraph, containing the conclusion

1093 E.g. Klinger 1996: 123 mentions the possibility that Ḫattušili I "während der Herrschaft seines Vorgängers in Kuššar als Gouverneur tätig war".

1094 Cf. Otten 1973 for an edition.

of the mythological narrative is quite damaged. It is therefore unclear whether the thirty Zalpa-raised princes indeed married their Kanišite sisters or not, and how the story about the interactions between Kaniš and Zalpa ends.

The remainder of the Zalpa-text deals with historical events: it is told how three kings undertake several campaigns against Zalpa, using Ḫattuša as their point of departure, and in the end destroy it. As was mentioned in § 10.2.2, the three kings who feature in this narrative are likely to be equated with three successive early Hittite kings: Ḫuzziya I ('the grandfather of the King'), Labarna I ('the old King'), and Ḫattušili I ('the King') (Beal 2003: 22–5).¹⁰⁹⁵

The fact that the final part of the text's mythological introduction is severely damaged, has hampered the interpretation of the Zalpa-text as a whole: at present there is no consensus on the relationship between the composition's mythological and historical part.¹⁰⁹⁶

However, a crucial indication of this relationship is the sentence with which the historical narrative begins: *mān appezziian kurur* [*kiš*]at 'When later on enmity arose' (KBo 3.38 obv. 7). It contains several important elements that can be used to assess the connection between myth and history in the Zalpa-text. First, the use of the word *appezziian* 'later on' clearly places the two parts of the Zalpa-text in a chronological order: the mythological narrative precedes the historical story. Moreover, the sentence as a whole describes a change of state: at the end of the period described in the mythological introduction there apparently was no enmity, which however was present during the period described in the historical events. In fact, since the historical narrative starts with this sentence, it follows that the rise of the enmity must be regarded as the impetus for the events described in the historical part, namely the campaigns that are undertaken against Zalpa. Second, it is not detailed between which parties the enmity arose. However, since the sections preceding this sentence deal with the interactions between Kaniš and Zalpa, it follows that the mentioned enmity arose between these two cities.¹⁰⁹⁷ If the author of the composition meant to refer to an enmity between parties other than Kaniš and Zalpa, he would have had to make that explicit in the text.

From this analysis of the first sentence of the historical part of the Zalpa-text it follows that its three protagonists, who undertake campaigns against Zalpa, do so in reaction to the rise of enmity between Kaniš and Zalpa. These kings thus act on behalf of Kaniš, and it therefore stands to reason to assume

1095 Although Beal identifies the 'grandfather of the King', who is here equated with Ḫuzziya I, as another person, cf. also footnote 1068.

1096 Cf. Gilan 2015: 189–207 (with references) for an overview of different analyses.

1097 Cf. Klinger 1996: 117: "zwischen Kaniš und Zalpa wohl gemerkt!"

that they belong to the Kanišite royal dynasty that in the past had had a peaceful relationship with Zalpa. At the same time, however, these three men have convincingly been identified with Ḫuzzija I, Labarna I, and Ḫattušili I, respectively; the early kings of the Hittite kingdom (Beal 2003: 22–5, cf. § 10.2.2). Moreover, from the Zalpa-text itself it is clear that they use the city of Ḫattuša as point of departure in their campaigns against Zalpa.

These two seemingly different affiliations – Kaniš on the one hand and Ḫattuša on the other – can be brought together if we assume that the Hittite royal dynasty forms a continuation of an earlier Kanišite dynasty, and that at a certain point in time the court of this dynasty was transferred from Kaniš to Ḫattuša. Such an assumption would be in line with the fact that the Hittites call their own language ‘Nēšite’ (§ 10.3.2), the fact that in the later archives of the Hittite royal family at Ḫattuša at least one composition by Anitta, king of Kaniš, was kept (§ 10.3.3), and the fact that Ḫattušili I seems to have a special relationship with Kuššara, the hometown of Anitta’s father Piṭḫāna. These latter two facts would specifically tie the early Hittite kings to the originally Kuššarite dynasty of Piṭḫāna and Anitta. The question exactly when Ḫattuša was chosen as the new court of this royal dynasty (already during or before the reign of Ḫuzzija I?¹⁰⁹⁸ Or during the reign of one of his successors?¹⁰⁹⁹) and whether the court was transferred directly from Kaniš to Ḫattuša¹¹⁰⁰ or via some intermediate city (e.g. Ḫurma?¹¹⁰¹ or Kuššara?¹¹⁰²) is of less relevance to this point. It is important, however, that the structure of the Zalpa-text, and especially the way in which its mythological introduction is tied to its subsequent historical part, indicates that the three protagonists of this latter part, the early Hittite kings Ḫuzzija I, Labarna I and Ḫattušili I, acted on behalf of Kaniš and thus must have belonged to or descended from the Kanišite royal family.

10.3.6 *Argument v: Ḫuzzija I Was Ruler of Kaniš*¹¹⁰³

An extension of the argumentation of the preceding section is formed by the following observation by Barjamovic, Hertel & Larsen (2012: 51): “the fact that [in the Zalpa-text] the man referred to as the ‘grandfather of the king’ held control over Hurama, implies that the territory between Hurama and

1098 Thus Sürenhagen 1998: 83³⁹ and Beal 2003: 22–5, cf. § 10.2.2.

1099 Thus Martínez 2016 and Kloekhorst fthc.b, cf. § 10.2.2.

1100 Thus Kloekhorst fthc.b.

1101 Thus Martínez 2016.

1102 This would be in line with the traditional view that Ḫattušili I moved his court to Ḫattuša from Kuššara, cf. footnote 1066.

1103 See Kloekhorst fthc.b, where this argument is treated as well.

Hattuša – including Kanesh – was [...] under his control”.¹¹⁰⁴ In other words, the ‘grandfather of the King’ of the Zalpa-text, who can be identified with Huzziya I,¹¹⁰⁵ held sway over both Hattuša and Kaniš.

According to Barjamovic, Hertel & Larsen, this fact can be explained in the following way. They point out that the rebuilding of Hattuša (ca. 1710–1705 BCE, cf. § 10.2.2) and the ascension of Huzziya I (ca. 1710–1700 BCE, cf. § 10.2.2) more or less coincides with the end of Kaniš Lower Town level 1b (some time after 1717 BCE, cf. § 10.3.1), which they equate with the destruction of the Kanišite royal palace. They thus conclude that “there may be no hiatus between the end of the reign of king Zuzu [the last king of Kaniš attested in Old Assyrian texts, A.K.] and the expansion of the kings of Hattuša” (2012: 51). To their mind, it seems “entirely possible” that Huzziya I, after having rebuilt the city of Hattuša, “conquered the region around Kanesh”, and that “the destruction of the Waršama Palace and the end of the 1b settlement in the lower town of Kanesh could have been the result of such a conflict with Hattuša” (*ibid.*). In other words, Barjamovic, Hertel & Larsen assume that Huzziya I originates from Hattuša, and after having rebuilt the city and having restored kingship there, proceeded to conquer and destroy Kaniš.

This view, which sees Huzziya I as an outside aggressor who ends the Kanišite dynasty, seems difficult to me, however: it is contradictive to all arguments treated above (§ 10.3.2–5) that plead in favour of a continuation of the Kanišite dynasty into the Hittite royal family. Moreover, as was discussed in § 10.3.1, it is not necessarily the case that the destruction of the Kanišite palace must be equated with the end of Lower Town level 1b (some time after 1717 BCE). On the contrary, the fact that after its destruction the Lower Town was quickly rebuilt (level 1a) and remained in use possibly up to 1650 BCE, implies that until that time a functioning administration was present in Kaniš, which requires the existence of a governmental building (cf. § 10.3.1).

Nevertheless, Barjamovic, Hertel & Larsen’s analysis of the Zalpa-text is attractive: the ‘grandfather of the King’, i.e. Huzziya I, indeed seems to have held sway over both Hattuša and Kaniš. To my mind, this fits perfectly with the analysis of the Zalpa-text as given in § 10.3.5, according to which the early

¹¹⁰⁴ The city of Hurama was situated to the south east of Kaniš, whereas Hattuša lay to its north west, cf. e.g. Barjamovic, Hertel & Larsen 2012: 85.

¹¹⁰⁵ Barjamovic, Hertel & Larsen’s statement that Kaniš may have been conquered by Huzziya I “or his successor” (2012: 51) probably reflects their uncertainty whether it is indeed Huzziya I who should be equated with the ‘grandfather of the King’ of the Zalpa-text, or whether this expression refers to someone else, who would then have been a successor of Huzziya (cf. *o.c.*: 51¹⁸³).

Hittite kings Ḫuzziya I, Labarna I and Ḫattušili I must have belonged to or descended from the Kanišite royal family.

We know from the Anitta-text that the Kanišite king Anitta conquered and destroyed Ḫattuša (ca. 1728 BCE) and thus incorporated the region surrounding Ḫattuša into his kingdom (§ 10.2.1). It must be admitted that it is not fully clear to what extent Anitta's successor Zuzu was also the ruler over all the regions that had been conquered by Anitta. As was discussed in § 10.3.1, it has been suggested that Zuzu may have been a usurper from outside Kaniš that violently took over the power from Anitta. If this would be the case, one could imagine that when Anitta was forced to give up his power in Kaniš, his grasp over the regions that he recently had conquered would have been lost as well, and that Anitta's large kingdom would fall apart. In such a situation, it would not be evident that the region surrounding Ḫattuša would remain under Kanišite control. However, as discussed in § 10.3.1, there is no real evidence that Zuzu's ascension to the throne of Kaniš was a violent one: there is no archaeological evidence from Kaniš that would point to turmoil around 1725 BCE. It is therefore by all means possible that Zuzu was the rightful successor of Anitta, and that his ascension to the Kanišite throne was a peaceful one. In such a situation, it would be more likely that Zuzu inherited Anitta's entire kingdom, including the region surrounding Ḫattuša. This may be supported by the fact that Zuzu carries the title LUGAL GAL 'Great King', just as his predecessor Anitta did (cf. § 10.3.1).

If this latter view is correct, Zuzu was ruler over both Kaniš and the region encompassing Ḫattuša. Since his reign probably lasted until at least after 1717 BCE (cf. Barjamovic, Hertel & Larsen 2012: 40, 51), it is conceivable that he was the person from whom Ḫuzziya I took over power, not only in Ḫattuša, which the latter rebuilt in ca. 1710–1705 BCE, but also in Kaniš. This implies that Ḫuzziya I was the direct successor of Zuzu as king of Kaniš, and that being the king of Kaniš automatically included having control over the land of Ḫattuša. In view of the arguments treated in § 10.3.2–5, which plead in favour of a continuation of the Kanišite dynasty into the Hittite royal family, we may assume that the transfer of the Kanišite throne from Zuzu to Ḫuzziya I was a peaceful one and that Ḫuzziya I was Zuzu's legitimate successor. If correct, we must assume that the destruction of the Lower Town level 1b, which may have been more or less contemporaneous with Ḫuzziya I's ascension to the Kanišite throne, was an unrelated event.¹¹⁰⁶

¹¹⁰⁶ An alternative scenario could be that Zuzu had indeed gained control over Kaniš as an outside usurper, as Kryszat (2008b: 210) proposed (cf. § 10.3.1), and that Ḫuzziya I, being a member of the Kuššarite dynasty of Piṭḫāna and Anitta, at a certain point in time

One could argue that this scenario is contradicted by the fact that the rebuilding of Ḫattuša by Ḫuzziya I disregards Anitta's explicit curse against such a resettlement: would one defy a direct order by one's direct forefather? However, as Bryce (2005: 68–9) cogently remarks, Ḫattuša “had certain natural advantages which, irrespective of the new dynasty's lineage, must have outweighed any consideration of Anitta's curse”. This argument therefore is of not much value.¹¹⁰⁷

I conclude that Barjamovic, Hertel & Larsen's observation (2012: 51) that the ‘grandfather of the King’ of the Zalpa-text, who can be equated with the earliest Hittite king Ḫuzziya I, held sway over the area encompassing Kaniš does not mean, as they have it, that, after he had rebuilt Ḫattuša and formed a power base there, he must have conquered Kaniš and violently ended Zuzu's reign. It is proposed here that the situation may rather have been the other way around: Ḫuzziya I ruled over Kaniš because as Zuzu's legitimate heir he succeeded him as king of Kaniš. Since at that moment in time the Kanišite kingdom included the site of Ḫattuša (as had been conquered some 20 years earlier by his predecessor's predecessor Anitta), Ḫuzziya I also became ruler over that region, and decided to rebuild the city, probably because of its strategic position.

In other words, this scenario entails that the first Hittite king, Ḫuzziya I, who the Hittites regarded as the founder of their royal dynasty, in fact started out his career as king of Kaniš. This means that the link between the early Hittite

violently reclaimed the Kanišite throne for his family. We could then assume that during these events Kaniš' lower town was burnt down.

1107 Moreover, although we may assume that the successions from Anitta to Zuzu and from Zuzu to Ḫuzziya I probably were legitimate ones, this does not mean that Ḫuzziya I must have been the grandson of Anitta. As Barjamovic, Hertel & Larsen (2012: 39) state, the time period that can be assigned to the reigns of Piṭḫana and Anitta combined is only some 25 years (ca. 1750–1725 BCE). Although we do not know how long Piṭḫana had already reigned in Kuššara, we may still assume that Anitta's reign was a relatively short one, perhaps only some fifteen years (cf. Larsen 2015: 34, who dates Anitta's reign to 1740–1725 BCE). Moreover, Zuzu's reign, too, may have been relatively short, only some fifteen years (ca. 1725–1710 BCE, cf. Barjamovic, Hertel & Larsen 2012: 51). This makes it unlikely that these men represent two successive generations. Moreover, if we assume that the average age to ascend the throne is 30–35, then Ḫuzziya I (who may have ascended the throne ca. 1710 BCE) would have been born around 1745–1740 BCE, i.e. at the time that Anitta became king of Kaniš. Ḫuzziya I should thus be of the generation of Anitta's children, not grandchildren. If Ḫuzziya I was a son of his predecessor Zuzu, this would mean that Zuzu belonged to the same generation as Anitta. May we therefore assume that Zuzu was not Anitta's son, but rather a family member of his own generation, i.e. a brother or a cousin? This would then also explain why Zuzu's reign was only 15 years: he would have been relatively old when ascending the throne. If this is correct, Anitta would have been Ḫuzziya I's uncle or first cousin once removed, and Ḫuzziya I may therefore not have felt much pressure to keep to Anitta's order not to rebuild Ḫattuša.

kings and Kaniš is a direct one: their lineage continues the Kanišite dynasty. This is fully in line with the argument presented in § 10.3.5.

10.3.7 *Arguments against a Connection with Kaniš*

As was mentioned at the beginning of section 10.3, as well, Gilan (2015: 194–201) is sceptical about a possible relationship between the early Hittite kingdom and Kaniš, and mentions several arguments against it. It must be remarked, however, that his discussion is prompted by the question whether the mythological part of the Zalpa-text (cf. § 10.3.5) could be seen as a foundation myth of the Hittite kingdom. He therefore tries to answer the question “Haben die ‘Hethiter’ selbst Kaneš/Neša als ihren Herkunftsort betrachtet?”, by offering a discussion “[ü]ber die frühe hethitische Etnizität” (o.c.: 194–5). This is a fundamentally different approach than the one taken in this chapter, however, which is concerned with the origin of the Hittite *language*. Some of Gilan’s points are therefore irrelevant for the present discussion. For instance, he states that although the Hittites call their own language ‘Nešite’, they designate themselves as belonging to the originally Hattic city Ḫattuša: LÚ^{MES} or DUMU^{MES} KUR URUḪATTI ‘men / sons of Ḫattuša’ (o.c.: 197). Yet, as Gilan notes himself, the latter term is merely geopolitical, and therefore of little value.

Other arguments are more interesting. For instance, Gilan points out that in the Hittite state cult the deities who are venerated by the ‘singers of Kaniš’ do not seem to occupy a special position (o.c.: 199). However, in a religion in which deities are very much bound to a certain place, it is not surprising that with the move of the court to another place the deities of the old capital would become less important. Moreover, with the Hittites’ willingness to incorporate new gods and goddesses into their pantheon, the expansion of the kingdom would have caused the number of deities to grow rapidly, simply pushing the old Kanišite ones to the background.

Another argument put forth by Gilan against a connection between the early Hittite kings and Kaniš is the fact that, after the destruction of Kaniš, “kein hethitische Großkönig [sich] verpflichtet gefühlt [hat], die Stadt wieder aufzubauen” (o.c.: 199). However, Kulakoğlu (2014) has recently argued that the abandonment of Kaniš that can be associated with the end of Lower Town level 1a may have been a voluntary one in reaction to rising water levels that caused the surroundings of the city to have become too swampy to be habitable. If this is correct, it may not be very surprising that later Hittite kings do not seem to have restored Kaniš to its former glory.¹¹⁰⁸

1108 But cf. Barjamovic 2015a that there must have been some continuity between Bronze Age Kaniš and its later layers (of Roman and Byzantine times, and even beyond).

A third argument raised by Gilan is the fact that Pitḫāna and Anitta are not mentioned in the Offering Lists to the Royal Ancestors (CTH 661), and that none of the Hittite kings “sich met diesen beiden in eine Reihe [stellte]” (o.c.: 200). However, as Forlanini (2010: 117) suggests, in the Offering Lists the names are mentioned of all deceased kings, queens and princes whose remains are present in Ḫattuša, either because they died there or because their remains were brought there at a later time. The absence of Pitḫāna and Anitta from these lists (and of Zuzu, for that matter) may simply reflect that their bones were not buried in Ḫattuša, but in Kaniš (or, in the case of Pitḫāna, in Kuššara?). And although it seems indeed true that the later Hittite kings saw Ḫuzziya I as the founder of the Hittite kingdom (as is clear from his presence on the ‘cruciform seal’, cf. § 10.2.2), the fact that the Anitta-text as composed by Anitta was not only kept in the archives of Ḫattuša, but also underwent maintenance there, indicates that the Hittite kings were aware of their link with Kaniš (cf. also § 10.3.3).

We can thus conclude that Gilan’s remark that to him “die moderne Hethitologie mit der Stadt Kaneš/Neša weitaus mehr verbunden [scheint] zu sein, als es die Hethiter je waren” (o.c.: 201) is not supported by the evidence; the facts rather point to a direct connection between the early Hittite kings (and their language) and Kaniš.

10.3.8 *Conclusion: Hittite Was Brought to Ḫattuša from Kaniš*

All in all, if we rephrase the question ‘from where did the Hittite language arrive at Ḫattuša?’ to ‘from where did the members of the new Hittite dynasty, who probably took the Hittite language with them, arrive at Ḫattuša?’, the answer can only be: from Kaniš.

10.3.9 *Excursus: the Connection with Aliṣar / Amkuṣa*

As we have seen in section 1.2, in the Old Assyrian tablets found in Aliṣar / Amkuṣa, we find several non-Assyrian names that are identical to Kanišite Hittite ones. This implies that also in Aliṣar people were living that, on the basis of their personal names, may be expected to have spoken Kanišite Hittite. However, as Singer (1981: 126) duly warns, the number of tablets from Aliṣar is “too small to serve as [a] statistical sample”. Moreover, he states that these tablets “probably date after Anitta’s conquest of the region, an event which may well have brought about considerable changes in the Anatolian ethnic scene”. Nevertheless, it is an interesting fact that in the Old Assyrian tablets from Boğazköy / Ḫattuša no Kanišite Hittite names are known, which to my mind could indicate that Aliṣar / Amkuṣa already earlier on may have been home to a number of people that spoke Kanišite Hittite.

10.4 Problem: Ḫattuša Hittite Is Not Kanišite Hittite

The conclusion that the Hittite language was brought to Ḫattuša from Kaniš flies into the face, however, of the main linguistic conclusion of the present book, namely that the Hittite variant as portrayed by a large group of personal names attested in the Old Assyrian texts from Kaniš is not identical to the Hittite variant that is attested in the texts that we know from Ḫattuša. Although the two variants are closely related, it was argued above that the difference between the two is large enough to regard them as different dialects, and, more importantly, that the one cannot have derived from the other and vice versa: both dialects are independent outcomes of an earlier, unrecorded language stage that we may call Proto-Hittite.

In other words, linguistically, Ḫattuša Hittite cannot be the continuation of Kanišite Hittite. How can we reconcile this with the historical analyses as presented in the preceding sections?

10.4.1 *Kanišite Hittite Personal Names in Ḫattuša Hittite Texts*

To my mind, a key to answering this question is formed by the personal names that are found both in texts from Kaniš and in texts from Ḫattuša. As we have seen in section 1.5, there are forty Kanišite personal names that have a (seeming) counterpart in the Hittite texts from Ḫattuša. Of these forty, there are fifteen names that can be identified as Hittitoid according to the criteria set out in chapters 5 (compound names) and 6 (other names):

Kaniš		Ḫattuša	Kaniš		Ḫattuša
<i>amuna</i> (m.)	~	^m <i>amuna</i>	<i>kikaršan</i> (m.)	~	^m <i>kikarša</i> ¹¹⁰⁹
<i>ḫapuašu</i> (m.)	~	^m <i>ḫappuṣaššu</i>	<i>kulanala</i> (m.)	~	^m <i>kuṣalanalla</i>
<i>ḫuzia</i> (m.)	~	^m <i>ḫuzziya</i>	<i>nakiliet</i> (m.)	~	^m <i>nakkiliet</i>
<i>ilaliuman</i> (m.)	~	^m <i>ilālium(m)a</i>	<i>pirua</i> (m.)	~	^m <i>pirua</i>
<i>inar</i> (m.)	~	^m <i>inar</i>	<i>šupiaḫšu</i> (m.)	~	^m š[<i>uppiṣ</i>]aḫšu
<i>inarawa</i> (m.)	~	^m <i>innarawa</i>	<i>šupiuman</i> (m.)	~	^m šuppiuman
<i>išpudaḫšu</i> (m.)	~	^m <i>išpudaḫšu</i>	<i>tamnašu</i> (g.u.)	~	^m <i>damnaššu</i>
<i>išpunuman</i> (m.)	~	^m <i>išpunnuma</i>			

Interestingly, a number of these names show specifically Kanišite features, also when attested in texts from Ḫattuša: ^m*išpudaḫšu* and ^mš[*uppiṣ*]aḫšu show syncope in *-ḫšu* (cf. section 9.2); ^m*išpudaḫšu* and ^m*išpunnuma* show vocalization of **-pnC-* > */-punC-/* (cf. section 9.3); and ^m*išpunnuma* shows a development

1109 This name is not attested in Ḫattuša, but in a Hittite text from Maṣat Höyük.

of **nd > /n:/* (cf. section 9.4). This means that these names, although attested in Ḫattuša Hittite texts, are linguistically Kanišite Hittite. To be certain, not all individuals bearing these names lived in Ḫattuša or even the Hittite empire. For instance, one of the individuals occurring in Hittite texts with the name *ṁiṣpudaḫšu* was a king of Kizzuḫatna (contemporary with the Hittite king Telipinu, ca. 1525–1500 BCE), and the presence of his name in Hittite texts therefore does not say anything about the linguistic situation in Ḫattuša.¹¹¹⁰ However, one of the individuals bearing the name *ṁiṣpunnuma*, for instance, was the scribe who wrote the land grant StBoTB 4.22, issued by the Hittite Great King himself, and there therefore can be no doubt that this person worked at the Hittite royal court.

The presence of these Kanišite Hittite personal names in Ḫattuša implies that there indeed must have been a certain influx from Kaniš into Ḫattuša, namely one in which these names were taken along. This fits our reconstruction that the early Hittite kings continued the Kanišite dynasty and at a certain point in time moved their court from Kaniš to Ḫattuša. The individuals carrying these Kanišite names can now be seen as the descendants of the original workers and personnel of the court at Kaniš that moved along with the royal family to Ḫattuša. But why is it not these people's language, Kanišite Hittite, that became the new language of the court at Ḫattuša? Why was a different dialect used there, namely the one that in this book is called Ḫattuša Hittite?

10.4.2 *Ḫattuša Hittite is Kuššarite*

To my mind, the answer can only be: because Ḫattuša Hittite does not derive from the language that was spoken by the people in the streets of Kaniš, but rather continues the language that was spoken at the court of Kaniš, and which had relatively recently been brought there by the conquerors Piṭḫāna and Anitta of Kuššara. In other words, Ḫattuša Hittite is in fact Kuššarite.

The idea that in Kuššara (a form of) Hittite was spoken, or that it at least was populated by people with an Indo-European background, is certainly not new. For instance, Neu (1974: 130³¹⁹, 133) puts forward two arguments in favour of this view. First, in the Anitta-text, Anitta describes how he goes on a campaign to Zālpuḫa to bring back “our god Šiu”, which had previously been taken away from Kaniš. According to Neu, this implies that this deity had been an important deity in Kuššara as well. Since the name of the deity, *^dšiu-*, is clearly Indo-European (reflecting PIE **dieu-* ‘day-god’), this could according to Neu

¹¹¹⁰ It does imply, however, that Kanišite Hittite names lived on after the Old Assyrian period in a region that lays to the south of Kaniš. Should we therefore interpret Kanišite Hittite as ‘South Hittite’?

indicate that Anitta himself was of an Indo-European origin, too. Second, the fact that Anitta's father Piṭḥāna, when he conquers Kaniš, does not do any harm to the local people, may in Neu's view imply, too, that there was an ethnic relationship between the Kuššarites and the people from Kaniš. Also Singer (1981: 129) thinks that "the Kuššaran dynasty was most probably Hittite" and argues that it originally may have been part of the larger 'Land of Kaniš' (*māt kaniš*).¹¹¹¹ The new idea put forward in this book is that the variety of Hittite spoken at Kuššara differed from the one spoken in Kaniš, and that it is in fact the Kuššaran variant that ended up becoming the Hittite of Ḫattuša, not the Hittite of Kaniš.

10.5 Conclusions

All in all, we may conclude the following. At the beginning of the second millennium BCE, in Kaniš a variant of Hittite was spoken that in this book is called Kanišite Hittite. However, Hittite was also spoken in other towns within the 'Land of Kaniš', for instance in Kuššara, albeit that this variant of Hittite was slightly different from the one spoken in Kaniš. Nevertheless, it is well possible that all these dialects were collectively called 'Kanišite / Nēšite', since Kaniš (which in Hittite was called Nēša) functioned as the capital of this region. At this time, Ḫattuša was probably still a Hattic city (cf. Fig. 2).

Around 1750 BCE, Piṭḥāna, king of Kuššara, took over the power in Kaniš (event 1 in Fig. 2), and from that moment onwards, at the Kanišite court the Kuššaran variety of Hittite was spoken, which was slightly different from the Kanišite dialect that was spoken by the inhabitants of the city. Piṭḥāna was succeeded by his son Anitta, who made Kaniš his capital and greatly enlarged his kingdom through several campaigns, during one of which Ḫattuša was conquered and destroyed (ca. 1728 BCE). The importance of Anitta had become so great, that at a certain point he gained the title 'Great King'. Around 1725 BCE, Anitta was succeeded by Zuzu, about whom not much is known, although he carries the title 'Great King' as well. It has been claimed that he might be a usurper from outside Kaniš, but the arguments in favour of this view are not decisive: there is no real good reason to doubt that Zuzu was the rightful successor of Anitta, and thus would continue the Kuššarite dynasty.

¹¹¹¹ The names Piṭḥāna and Anitta (and Zuzu) do not seem to have an Indo-European background, cf. section 4.7. This does not contradict the idea that they may have spoken an Indo-European language, of course.

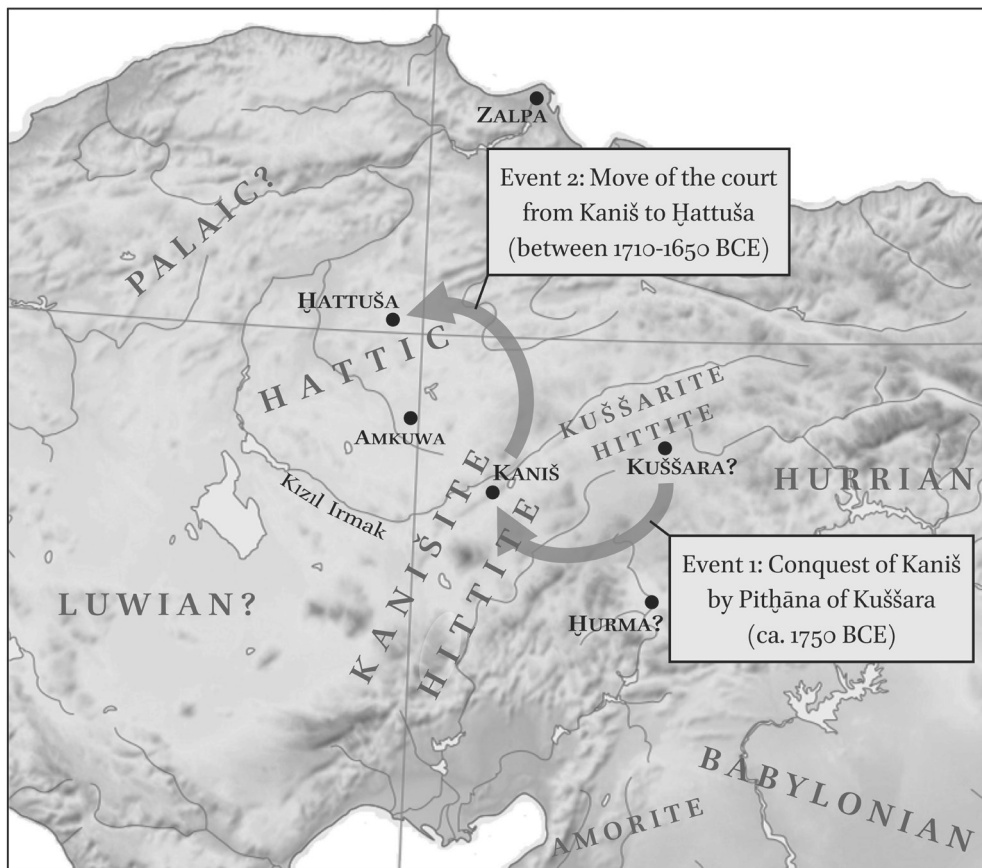

FIGURE 2 The linguistic landscape of Central Anatolia around 1800–1650 BCE (incl. the two events that spread Kuššarite Hittite from Kuššara, via Kaniš, to Ḫattuša)

After Zuzu, whose reign may have ended ca. 1710 BCE, the power over Kaniš went over in the hands of Ḫuzziya I. It has been claimed that he, too, would be an outside usurper who gained control over Kaniš by force, but this idea depends on the assumption that the destruction of the Kanišite palace is contemporary to the end of Kaniš Lower Town level 1b (some time after 1717 BCE). This need not be the case, however, and the transfer of power from Zuzu to Ḫuzziya I therefore need not have been a violent one. In § 10.3.6, it has been argued that Ḫuzziya I may in fact have been the rightful successor of Zuzu, and would thus continue the Kuššarite dynasty. Around 1710–1705 BCE, he decided to rebuild Ḫattuša, the site of which had been under the control of the Kanišite kingdom since the times of Anitta. These resettlement works must have introduced the first speakers of Kuššarite Hittite into Ḫattuša. At a certain moment

in time, either under Ḫuzziia I, or during the reigns of his successors Labarna I (ca. 1680–1650 BCE) and Ḫattušili I (from ca. 1650 BCE onwards) it was decided to move the royal court from Kaniš to Ḫattuša (event 2 in Fig. 2), possibly because due to rising water levels, the areas around Kaniš were becoming uninhabitable (§ 10.3.7). During the transfer of the court not only (a part of) the archive of Kaniš, including the Anitta-text, was taken along, but also large numbers of workers, personnel and officials. Although some of these people carried names that show that they were original Kanišite Hittites, they all probably used as their main language Kuššarite Hittite, which at that time was the preferred language of communication at the Kanišite court. It was therefore this Kuššarite Hittite that from that moment onwards became the language at the new court in Ḫattuša as well. It remained to be used as such at least up until the collapse of the Hittite Empire around 1180 BCE.

The fate of Kanišite Hittite is less clear. In the second half of the 17th century BCE, Kaniš loses its function as a trading hub, and may even become largely abandoned. In Hittite texts from after this period, Kaniš is hardly mentioned,¹¹¹² and we therefore have no idea about the nature of its population or the language (or languages) these people spoke. The fact that Išpudaḫšu, king of Kizzuwatna (the region south of Kaniš) at the end of the 16th century BCE,¹¹¹³ bears a clearly Kanišite Hittite name (cf. § 5.3.61), may be viewed as an indication that Kanišite Hittite remained in use in South Central Anatolia up to this period. However, Kizzuwatna was at that time also home to speakers of Hurrian (a language originating from East Anatolia) and Luwian (a language that probably originated in West Anatolia).¹¹¹⁴ Since especially Luwian was during the second millennium BCE quickly spreading into Central and South East Anatolia, becoming the dominant language there,¹¹¹⁵ it seems likely that Kanišite Hittite had become marginalized already when the second half of the 2nd millennium BCE set in. Unlike its Ḫattušan sister dialect, it probably did not live to witness the end of the Hittite Empire.

1112 The youngest attestation of Kaniš in a Hittite text stems from the Apology of Ḫattušili III (CTH 81; reign 1267–1237 BCE), where we read (KBo 3.6 i 70–71, with duplicate KUB 1.1 ii 5–7): *nu=kan* ^{LU}KUR ^{ID}*marāššantan zā[iš] nu KUR* ^{URU}[...]PA[... *ḡal*]*ahḫeškeuḡan dāiš nu KUR* ^{URU}KANEŠ *ḡalahḫeškeuḡan dāiš* ‘The enemy (= the Kaškaeans) crossed the river Maraššanta, and started to attack the land of ...pa..., and started to attack the land of Kaniš’.

1113 Išpudaḫšu is a contemporary of the Hittite king Telipinu, who reigned ca. 1525–1500 BCE, cf. Bryce 2005: 104–5.

1114 Miller 2004: 256; Yakubovich 2010: 272–85.

1115 Melchert 2003c: 11–14; Bryce 2003: 31. Differently Yakubovich 2010.
